1. Introduction

1.1. PRODUCT INTRODUCTION

1.1.1. Product overview

The SFC4100AB products are managed 10 Gigabit Ethernet switches designed for use. They feature 10/100/1000Mbps TP ports and SFP slots that support 100M/1G/2.5G/10G Base-X.

The 10-Gigabit Managed Ethernet Switches can automatically identify the correct transmission speed and determine the Port's Full/Half Duplex mode. These switches can handle large-scale data transmission in secure topologies connected to backbones or servers. Additionally, to ensure low latency and high data integrity, they support the store-and-forward transmission method, which removes unnecessary traffic and relieves congestion on critical network paths.

Through an intelligent address recognition algorithm, this managed 10 Gigabit Ethernet switch can recognize up to 32,000 different MAC addresses and provide complete transmission speed filtering and forwarding capabilities.

Model	TP Port (1Gbps)	Combo Port	SFP Slot (1Gbps)	SFP Slot (2.5Gbps)	SFP Slot (10Gbps)	Operating Temperature	Remarks (S-Ring, ERPS)
SFC4100AB	4 ports	4 ports	16 slots	8 slots	4 slots	-40°C ~ 80°C	1~16 Port SFP 1Gbps 17~24 Port SFP 2.5Gbps 25~28 Port SFP 10Gbps

※This product features combo ports that share port numbers with UTP and SFP. The combo ports are numbered 1 to 4, and when using the combo ports, please use either UTP or SFP

1.2. PRODUCT FEATURES

1.2.1. Physical Port

1.2.1.1. SFC4100AB

- 4 10/100/1000BASE-T RJ45 Copper ports
- 4 Combo Ports (1Gbps RJ45 or 1Gbps SFP Slots)
- 16 100/1000BASE-X SFP Slots
- 8 100/1000/2500BASE-X SFP Slots
- 4 100/1000/10GBASE-X SFP+ slots
- UTP Port, SFP Slot Status LED
- Console interface for basic managements and setup

1.2.2. Common features

1.2.2.1. Layer2 Features

- High performance of Store-and-Forward architecture and runt/CRC filtering eliminates erroneous packets to optimize the network bandwidth
- Storm Control support
 - Broadcast / Multicast / Unknown unicast
- Supports VLAN
 - IEEE 802.1Q tagged VLAN
 - Up to 255 VLANs groups, out of 4094 VLAN IDs
 - Supports provider bridging (VLAN Q-in-Q, IEEE 802.1ad)
 - Private VLAN Edge (PVE)
 - Protocol-based VLAN
 - MAC-based VLAN
 - Voice VLAN
 - GVRP (GARP VLAN Registration Protocol)
- Supports Spanning Tree Protocol
 - IEEE 802.1D Spanning Tree Protocol (STP)
 - IEEE 802.1w Rapid Spanning Tree Protocol (RSTP)

- IEEE 802.1s Multiple Spanning Tree Protocol (MSTP), spanning tree by VLAN
- BPDU Guard
- Supports Link Aggregation
 - 802.3ad Link Aggregation Control Protocol (LACP)
 - Cisco ether-channel (static trunk)
 - Maximum 10 trunk groups, up to 16 ports per trunk group
- Provides port mirroring (1-to-1 / Many-to-1)
- Port mirroring to monitor the incoming or outgoing traffic on a particular port
- Loop protection to avoid broadcast loops

1.2.2.2. Quality of Service

- Ingress Shaper and Egress Rate Limit per port bandwidth control
- 8 priority queues on all switch ports
- Traffic classification
 - IEEE 802.1p CoS
 - TOS / DSCP / IP Precedence of IPv4/IPv6 packets
 - IP TCP/UDP port number
 - Typical network application
- Strict priority and Weighted Round Robin (WRR) Cos policies
- Supports QoS and In/Out bandwidth control on each port
- Traffic-policing on the switch port
- DSCP remarking

1.2.2.3. Multicast

- Supports IPv4 IGMP Snooping v1, v2 and v3
- Supports IPv6 MLD Snooping v1 and v2
- Querier mode support
- IPv4 IGMP Snooping port filtering
- IPv6 MLD Snooping port filtering
- Multicast VLAN Registration(MVR) support

1.2.2.4. Security

- Authentication
 - Built-in RADIUS client to co-operate with the RADIUS servers
 - TACACS+ login users access authentication
 - RADIUS / TACACS+ users access authentication
 - Guest VLAN assigns clients to a restricted VLAN with limited services
- Access Control List
 - IP-based Access Control List (ACL)
 - MAC-based Access Control List
- Source MAC / IP address binding
- DHCP Snooping to filter un-trusted DHCP messages
- Dynamic ARP Inspection discards ARP packets with invalid MAC address to IP address binding
- IP Source Guard prevents IP spoofing attacks
- Auto DoS rule to defend DoS attack
- IP address access management to prevent unauthorized intruder

1.2.2.5. Management

- IPv4 and IPv6 dual stack management
- Switch Management Interfaces
 - Console / Telnet Command Line Interface
 - Web(http/https) switch management
 - SNMP v1, V2c, and v3 switch management
 - SSH v2.0 service secure access
 - HTTPS SSL/TLS v1.2 Service for Secure Connections
- SNMP Management
 - Four RMON groups (history, statistics, alarms, and events)
 - SNMP trap for interface Link Up and Link Down notification
- IPv6 IP Address / NTP / DNS management
- Built-in Trivial File Transfer Protocol (TFTP) client
- BOOTP and DHCP for IP address assignment

- System Maintenance
 - Firmware upload/download via HTTP/TFTP
 - Reset button for system reboot or reset to factory default
 - Dual images
- DHCP Relay
- DHCP Option82
- DHCP Server
- User Privilege levels control
- NTP (Network Time Protocol)
- Link Layer Discovery Protocol (LLDP) and LLDP-MED
- Network Diagnostic
 - ICMPv6 / ICMPv4 Remote Ping
 - Cable Diagnostic technology provides the mechanism to detect and report potential cabling issues
- SMTP / Syslog remote alarm
- System Log

1.3. PRODUCT SPECIFICATION

Product	SFC4100AB
Hardware Specifications	
Copper Ports	4 10/100/1000Mbps RJ45 auto-MDI/MDI-X Ports
Combo Port	4 RJ45 Port or 4 1G SFP Slots
Fiber Slots	16 100/1000Mbps SFP Slots 8 100/1000/2500Mbps SFP Slots 4 100/1000/10000Mbps SFP Slots
Console	1 x RJ45 serial port (Baud Rate : 115200)
Reset Button	< 2sec : No Action <10sec : Default Reset (keep ip address) >10sec : Factory Reset (All the configurations to default values)
Power Requirements	AC 100 ~240V
Power Consumption	AC 20.4W / 46.9W
Operating Temperature	0°C ~ 60°C
Size (WxDxH)	440x225x44 (mm)
Switching Specifications	
Switch Architecture	Store-and-Forward
Switch Fabric	152Gbps
Throughput	113Mpps
CPU	CPU MIPS24Kec Core 500MHz (32bit)
RAM/Flash Memory	256MB/16MB
MAC Address Table	32K
Data Buffer	32Mb

Flow Control	IEEE 802.3x pause frame for full duplex Back pressure for half duplex
Jumbo Frame	10K
Software Functions	
Port Configuration	- Port disable / enable - Auto-negotiation 10/100/1000Mbps full and half duplex mode selection - Flow Control disable / enable
Port Status	Display each ports speed duplex mode, link status, flow control status, auto-negotiation status
VLAN	Port-Based / 802.1Q Tagged Based VLAN, Up to 255 VLAN groups Q-in-Q tunneling Private VLAN Edge (PVE) MAC-based VLAN Protocol-based VLAN Voice VLAN MVR (Multicast VLAN Registration) Up to 255 VLAN groups, out of 4096 VLAN ID
Link Aggregation	IEEE 802.3ad LACP / Static Trunk Supports 5 groups of 8-Port trunk
QoS	4 Priority Queue and traffic classification based on 802.1p priority, DSCP field in IP packet
IGMP/MLD snooping	IGMP (v1/v2/v3) Snooping, up to 255 multicast Groups MLD (v1/v2) Snooping, up to 255 multicast Groups
Access Control List	IP-Based ACL / MAC-Based ACL Up to 123 entries
Bandwidth Control	Per port bandwidth control Ingress: 500Kb ~ 1000Mbps Egress: 500Kb ~ 1000Mbps
Port Mirror	One to Multi-port and the monitor mode is RX
SNMP MIBs	RFC-1213 MIB-II IF-MIB RFC-1493 Bridge MIB RFC-1643 Ethernet MIB RFC-2863 Interface MIB RFC-2665 Ether-Like MIB RFC-2819 RMON MIB (Group 1,2,3,9)

	RFC-2737 Entity MIB RFC-2618 RADIUS Client MIB RFC-2933 IGMP-STD_MIB RFC3411 SNMP-Frameworks-MIB LLDP MAU_MIB
Ring Protocol	ERPS, STP, RSTP, MSTP, S-Ring
Inter-VLAN Routing	Supported
Static Routes	128 IPv4 Routes
Standards Conformance	
Network Standards	IEEE 802.3 10Base-T Ethernet IEEE 802.3u 100Base-TX/100Base-FX Fast Ethernet IEEE 802.3z Gigabit Ethernet (SX/LX) IEEE 802.3ab Gigabit 1000T IEEE 802.3x Flow Control and Back pressure IEEE 802.3ad Port trunk with LACP IEEE 802.1D Spanning tree protocol IEEE 802.1w Rapid Spanning Tree protocol IEEE 802.1s Multiple spanning tree protocol IEEE 802.1p Class of service IEEE 802.1Q VLAN Tagging IEEE 802.1ab LLDP RFC 768 UDP RFC 793 TFTP RFC 791 IP RFC 792 ICMP RFC 2068 HTTP RFC 1112 IGMP version 1 RFC 2236 IGMP version 2 RFC 3376 IGMP version 3 RFC3590 MLDv1 RFC4604 MLDv2 ITU-T G.8032 Ethernet Ring Protection Switching

1.4. PRODUCT CONTENTS

	SFC4100AB
Managed 10G Ethernet Switch	0
Rack Mount Bracket	0
Fixed Screw	0
AC Power Cable	1EA

If any of the contents are missing or damaged and need to be repaired, please repack the product and accessories in the box and contact the manufacturer or dealer.

2. Exterior

2.1. MODEL & EXTERIOR

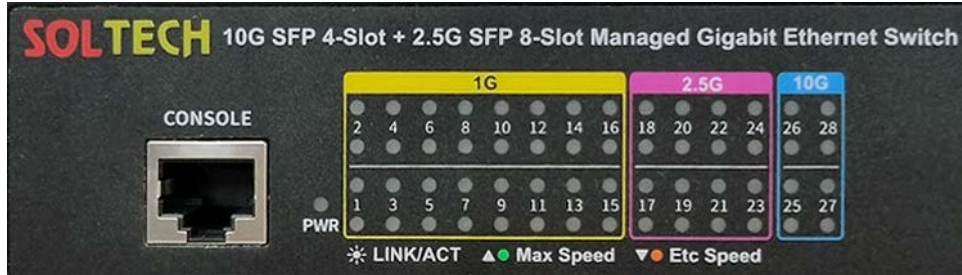

Model	Exterior	Port Information	Product Size
SFC4100AB		10/100/1000BASE-T Port 4 Combo Port 4 (UTP or SFP) 1G SFP Slot 16 2.5G SFP Slot 8 10G SFP Slot 4 Console Port 1 RESET Switch 1 (for Default-config)	440x225x44 (mm)

2.2. LED CONDITION

The front panel LED indicates the immediate status of power, system status, port link/active and PoE to monitor, diagnose and resolve potential issues with connected devices.

The following diagram shows the switch LED indicators for product SFC4100AB:

2.2.1. SFC4100AB

	LED	Color	상태	상태 설명
System	PWR	Green	On	Switch Power On
UTP (1~4)	10/100Mbps Link/ACT	Orange	On	UTP port link up
			Off	UTP port link down
	1000Mbps Link/ACT	Green	Flashing	Data communicating
SFP 1G (1~16)	100Mbps Link/ACT	Orange	On	SFP Port link up
			Off	SFP Port link down
	1Gbps Link/ACT	Green	Flashing	Data communicating
SFP 2.5G (17~24)	100M/1Gbps Link/ACT	Orange	On	SFP Port link up
			Off	SFP Port link down
	2.5Gbps Link/ACT	Green	Flashing	Data communicating
SFP 10G (25~28)	100M/1Gbps Link/ACT	Orange	On	SFP Port link up
			Off	SFP Port link down
	10Gbps Link/ACT	Green	Flashing	Data communicating

2.3. POWER INPUT METHOD

On the rear side of the SFC4100AB, there is a power input slot. Depending on the product, the following AC power can be supplied.

- SFC4100AB : AC Power Input 100~240V/50~60Hz 1ea

Power Notice:

1. The device requires power to operate. It will not function until power is supplied. If the user's network needs to be active at all times, consider using an Uninterrupted Power Supply (UPS) device. This can prevent network data loss or network downtime.
2. Installing surge suppression devices in some areas can protect the Ethernet PoE Switch from damage caused by unrelated surges or currents, ensuring its safety.
3. Chassis grounding is the practice of connecting the metal frame of electrical devices to the common return part of the circuit's power. While grounding is not always required, a decrease in insulation resistance between the power supply and equipment can lead to problems.

3. Installation of bracket

In the basic accessories of the SFC4100AB product, Rack Mount brackets are included. These brackets allow for mounting the product on a 19-inch RACK. Bracket installation is completed by aligning the screw holes and assembling the provided screws, as shown in the diagram below

SFC4100AB Rack Mounting Diagram

4. Installation of Product

In this section, we will explain the installation of the Managed 10G Ethernet Switch and the procedure for connecting devices to the switch. Please follow the steps provided below in the given order to install the Managed 10G Ethernet Switch on a desktop or shelf.

4.1. INSTALLATION PROCEDURE FOR SFC4100AB

Step 1

Place the SFC4100AB, near a 100 ~ 240Vac power source.

Step 2

Maintain sufficient ventilation space between the Managed 10G Ethernet Switch and surrounding objects.

Step 3

Connect the switch to your network devices.

Notice: The connection to the Managed 10G Ethernet Switch requires UTP Category 5E specification or higher network cables.

Step 4

Switch Power Supply

A. Connect the power cable to the Managed 10G Ethernet Switch.

B. Connect the power source cable to the power outlet.

Notice: When the Managed 10G Ethernet Switch receives power, the power LED (Green) will be continuously lit.

4.2. INSTALLATION OF SFP MODULE

SFP transceivers module (in the following sections referred to as SFP module) typically provide Hot-pluggable and Hot-swappable functionality. Users can remove or insert the module into the SFP slot of the Managed 10G Ethernet Switch without the need to power off the switch.

Plug-in the SFP Transceiver Module

Before connecting to other switches, workstations, or media converters, please check the following

A. Ensure that both sides of the SFP module have the same media type.

For example Connect 1000BASE-SX to 1000BASE-SX. / Connect 1000BASE-LX to 1000BASE-LX.

B. Ensure that the SFP module matches the type of fiber optic cable.

For 1000BASE-SX SFP module, use Multi-mode fiber cables with Duplex LC connectors.

For 1000BASE-LX SFP module, use Single-mode fiber cables with Duplex LC connectors.

4.3. INSTALLATION OF FIBER OPTIC CABLE

A. Connect the network cable with Duplex LC connectors to the SFP module.

B. Connect the other end cable to the device with an SFP module inserted into the fiber NIC (e.g., Gigabit Ethernet Switch or Media Converter)

C. Check the SFP module's proper functioning by using the LED LINK/ACT near the SFP slot on the front of the switch.

D. If the link fails, please check the connection mode of the SFP slot.

Some Fiber NICs may require setting the link mode to '1000 Force.'

4.4. REMOVING TRANSCEIVER MODULE

- A. Check if there is current network activity on the port with the SFP module to be removed, or Disable the port through the Switch/Converter's management interface.
- B. Remove the Fiber cable smoothly.
- C. Hold the handle of the SFP module horizontally.
- D. Carefully pull the module out by holding the handle smoothly.

Notice: Please do not pull out the SFP module wildly.

It can damage the Managed 10G Ethernet Switch or SFP slot.

4.5. OPERATING SYSTEM

This switch is positioned at the front-end of IT equipment such as IP cameras, IP phones, PCs, printers, and storage devices, where it handles packets from each terminal. It forwards multiple 2nd-layer Virtual LANs (VLANs) to other switches/routers for network segmentation, or it is deployed at connection points between networks with different 3rd-layer VLANs, forwarding IP packets between VLAN interfaces with different address ranges.

In the switch operating environment, it may include external entities such as a log server for storing and managing logs generated by the switch, an authentication server for administrator authentication, an SNMP server for switch management, and an NTP server for time synchronization. Additionally, depending on the product and the required functionalities provided by the switch, other external entities may be included in the operating environment.

The base Operating System Version : RTOS eCos 3.0

- OpenSSL Version 1.1.1
- SSH 2.0 – Dropbear_2018.76

5. Switch Access Guide

Here's a brief introduction on how to access device

5.1. THE INITIAL DEFAULTS VALUES

The initial values of the equipment are as follows:

Items	Defaults Values	Note
Administrator account	admin	
Administrator password	admin	
Operating mode change password	admin	Same as the Administrator password
Console	Enabled	Baud rate : 115200, Data bits : 8 Parity : None Stop bits : 1
SNMP	Disabled	
Telnet	Disabled	
SSH	Enabled	
HTTP/HTTPS	Enabled	HTTP redirection Enabled
Default IP Address	192.168.10.100	Subnet mask 255.255.255.0/24
Port state	Enabled	
Audit data generation	Enabled	

5.2. WEB INTERFACE

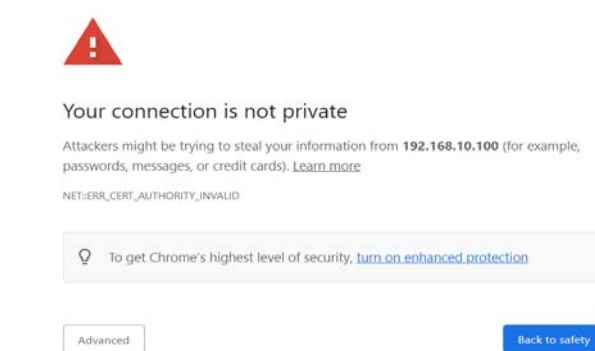

5.2.1. WEB Login

This page provides a brief overview of accessing the web interface.

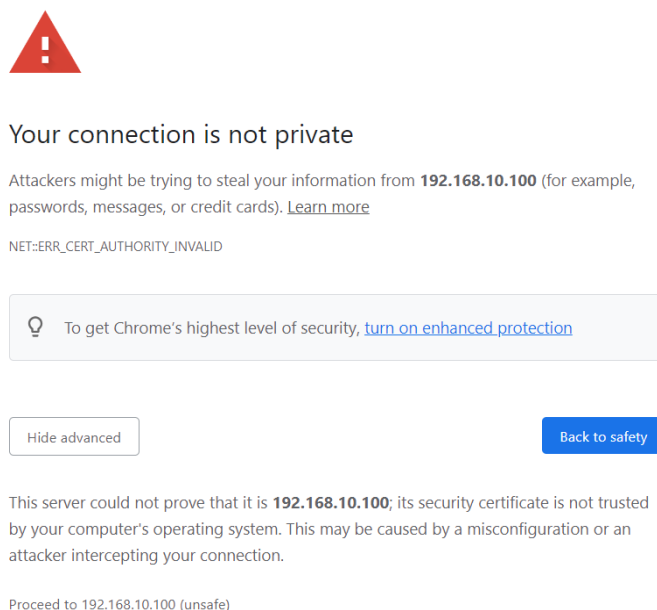

1. Users must know IPv4 Address of device to WEB set.
2. Connect AP (LAN interface) with PC (LAN port) using enclosed LAN cable.
3. Access WEB using IPv4 address of AP. (Initial IP - 192.168.10.100).

Privacy error page appears.

Click Advanced.

Click Proceed to 192.168.10.100(unsafe)

Sign in page appears.

Sign in

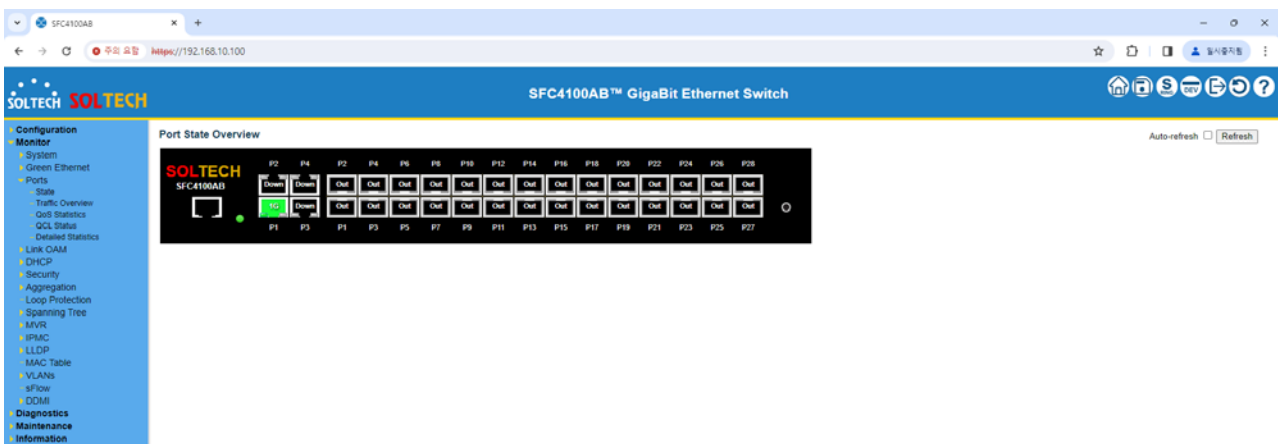

https://192.168.10.100

Username

Password

Enter your Username and Password, then click on "Sign in." (Default ID: admin, PW: admin)

4. Successfully connected to the equipment's web interface.

5.3. CLI INTERFACE

5.3.1. CLI Basic Symbol

This page is the description of symbols commonly used in CLI(Command Line Interface) commands.

Symbol	Description
< >	The symbol indicates that you have to enter a value directly. Put in English, numbers, or special characters.
{ }	The symbol indicates optional items. You have to choose one.
[]	The symbol indicates optional items. You do not have to choose at all
()	The symbol used to indicate mandatory items that must be filled
*	The symbol used in the Port interface to select the entire port
	The symbol used as a delimiter to represent multiple items

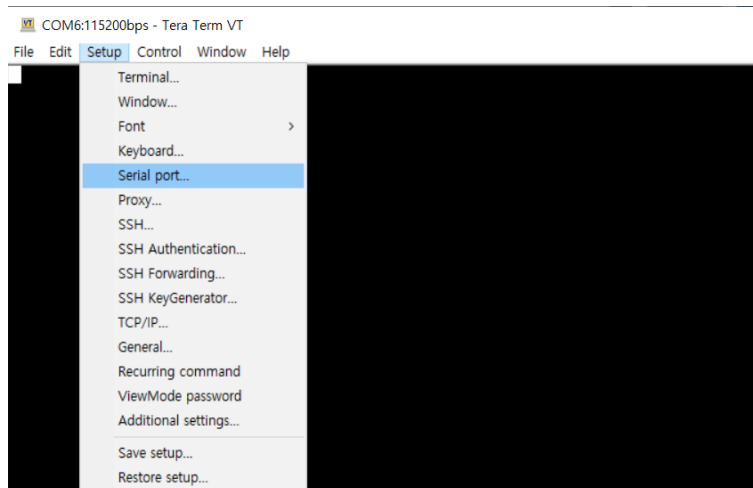

5.3.2. Console

Console setting is used for simple setting, the device has to connect one to one.

Please connect device with RS-232port of PC using Console cable, which is enclosed.

Setting method of below is made by Tera Term(freeware).

1. Setup → Serial Port

2. Set Serial Port.(Set Speed 115200 like below)

3. Access Device with Console.(New Connection Alt+N)

The initial ID and password are both "admin."

4. You are currently connected to the console.(Initial ID-admin, PW-admin or the password you previously set) After entering the password, type "enable" to enter switch operational mode. (Please reconfirm the password.)

5.3.3. Telnet

This page provides an explanation of Telnet connection.

You should follow the same configuration steps as mentioned in item 2 of the console connection.

Telnet allows for switch access from a computer within the same network.

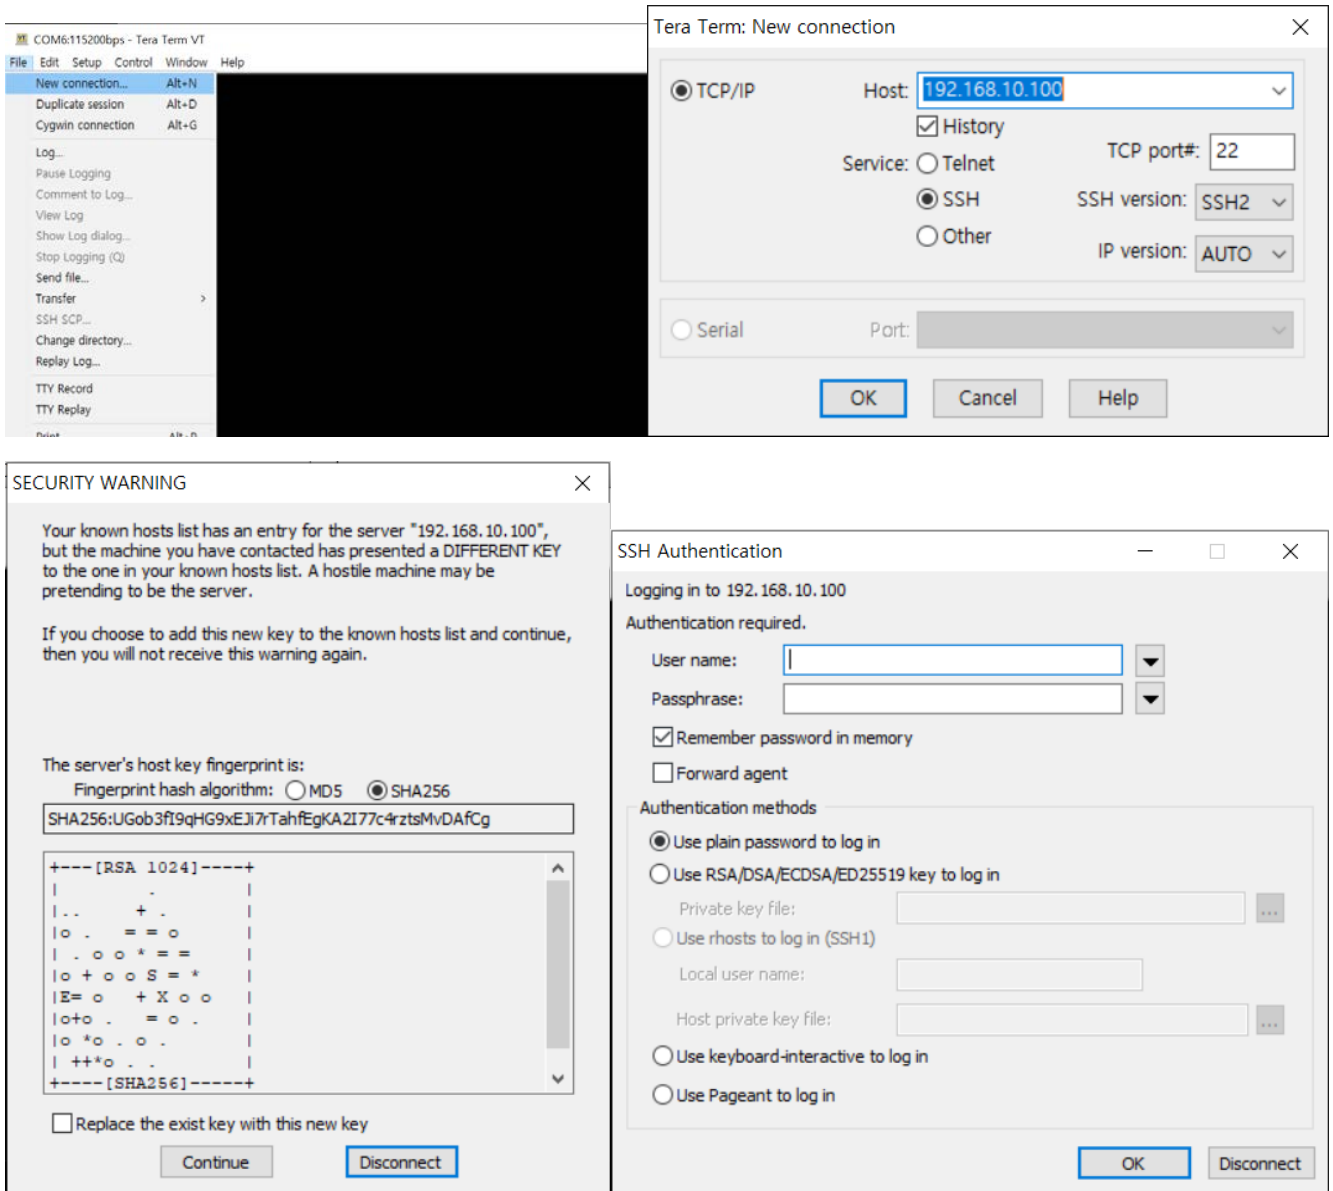

```
[Telnet] Username: admin
[Telnet] Password:
> enable
Password: *****
#
```

After entering the password, type "enable" to enter switch operational mode. (Please reconfirm the password.)

5.3.4. SSH

This page provides an explanation of SSH connection.

You should follow the same configuration steps as mentioned in item 2 of the console connection.

Click "Continue (C)" on the security warning window

Enter your username and password in the SSH Authentication window.

```
> enable
Password: *****
#
```

After entering the password, type "enable" to enter switch operational mode. (Please reconfirm the password.)

5.4. CLI BASIC COMMAND

This page provides an explanation of basic commands used in the Command-Line Interface (CLI).

5.4.1. CLI Basic use Key

✓ TAB key

When entering a command, pressing the TAB key will either display the next possible command or complete the existing command. When you see '<cr>' displayed in the CLI, it indicates that you can input the command at that point.

✓ Help

help
 Help may be requested at any point in a command by entering a question mark '?'. If nothing matches, the help list will be empty and you must backup until entering a '?' shows the available options.
 Two styles of help are provided:

1. Full help is available when you are ready to enter a command argument (e.g. 'show ?') and describes each possible argument.
2. Partial help is provided when an abbreviated argument is entered and you want to know what arguments match the input (e.g. 'show pr?').

✓ '?' key

Help may be requested at any point in a command by entering a question mark '?'.

```
# ?
clear      Reset functions
configure  Enter configuration mode
copy       Copy from source to destination
delete     Delete one file in flash: file system
dir        Directory of all files in flash: file system
disable    Turn off privileged commands
do         To run exec commands in the configuration mode
enable     Turn on privileged commands
erps       Ethernet Ring Protection Switching
exit       Exit from EXEC mode
firmware   Firmware upgrade/swap
help       Description of the interactive help system
ip         IPv4 commands
```

ipv6	IPv6 configuration commands
link-oam	Link OAM configuration
logout	Exit from EXEC mode
more	Display file
no	Negate a command or set its defaults
ping	Send ICMP echo messages
platform	Platform configuration
reload	Reload system.
send	Send a message to other tty lines
show	Show running system information
terminal	Set terminal line parameters
veriphy	VeriPHY keyword

✓ '??' key

Enter the '??' key, it displays the complete list of commands that can be written in the current state.

5.4.2. CLI Basic use Mode

Command Mode	Access Method	Prompt	Exit or Access Previous Mode
User Mode	This is the first level of access. Perform basic tasks and list system information.	Switch>	Logout, Exit Command
Privileged Mode	From the User Mode, enter the "enable" command.	Switch#	Exit, Logout, Disable Command
Global Config Mode	From the Privileged Mode, enter the "configuration terminal" command.	Switch (Config)#	Exit, End Command
Interface Config Mode	From the Global Config mode, enter the "interface <port#>" "interface <VLAN number>" command.	Switch (config-if)# Switch (config-if-vlan)#	Exit, End Command

5.4.3. CLI Basic Command

✓ Login

Users need to input username and password when login firstly.

```
[Console] Username: admin
[Console] Password:
>
```

✓ Logout

To log out the current user or log in as a new user, please log out.

```
switch# logout
Exit BYE !!!
###: Press ENTER to get started
```

✓ Enable

To Turn on privileged commands, you can use the "enable" command.

```
> enable
Password: *****
#
```

✓ Disable

To Turn off privileged commands, you can use the "disable" command.

```
# disable
>
```

✓ Exit

To exit mode, you can use the "exit" command.

```
> exit
Exit BYE !!!
###: Press ENTER to get started
```

✓ **Clear**

To delete the remaining records, you can use the "Clear" command.

# clear ?	
access	Access management
access-list	Access list
eps	Ethernet Protection Switching.
erps	Ethernet Ring Protection Switching
ip	Interface Internet Protocol configuration commands
ipv6	IPv6 configuration commands
lacp	Clear LACP statistics
link-oam	Clear Link OAM statistics
lldp	Clears LLDP statistics.
logging	System logging message
mac	MAC Address Table
mep	Maintenance Entity Point
mvr	Multicast VLAN Registration configuration
sflow	Statistics flow.
spanning-tree	STP Bridge
statistics	Clear statistics for one or more given interfaces

✓ **No**

To negate a command or set its defaults, you can use the "no" command.

# no ?	
debug	Debugging functions
port-security	Port security (MAC limiter)
terminal	Set terminal line parameters

✓ **Terminal**

To set terminal line parameters, you can use the "terminal" command.

# terminal ?	
editing	Enable command line editing
exec-timeout	Set the EXEC timeout
help	Description of the interactive help system
history	Control the command history function
length	Set number of lines on a screen
width	Set width of the display terminal

✓ **Show**

To Show running system information, you can use the "show" command.

```
# show ?
aaa          Authentication, Authorization and Accounting methods
access       Access management
access-list  Access list
aggregation  Aggregation port configuration
audit-log    System Audit Log message
clock        Configure time-of-day clock
ddmi         DDMI configuration
eps          Ethernet Protection Switching
erps         Ethernet Ring Protection Switching
green-ethernet Shows green Ethernet status for the switch.
history      Display the session command history
interface    Interface status and configuration
ip           Internet Protocol
ipmc         IPv4/IPv6 multicast configuration
ipv6         IPv6 configuration commands
lacp         LACP configuration/status
line         TTY line information
link-oam     Link OAM configuration
lldp         Display LLDP neighbors information.
logging      System logging message
loop-protect Loop protection configuration
mac          Mac Address Table information
mep          Maintenance Entity Point
module-status Print Modulte Trhead Status
monitor      Monitoring different system events
mvr          Multicast VLAN Registration configuration
ntp          Configure NTP
platform     Platform configuration
poe          Power Over Ethernet.
port-security Port Security status - Port Security is a module with no
              direct configuration.
privilege    Display command privilege
process      process
pvlan        PVLAN configuration
qos          Quality of Service
```

radius-server	RADIUS configuration
rmon	RMON statistics
running-config	Show running system information
scan-agent	SCAN-AGENT Module
sflow	Statistics flow.
snmp	Display SNMP configurations
spanning-tree	STP Bridge
sring	SRING Module
switchport	Display switching mode characteristics
system	system
tacacs-server	TACACS+ configuration
terminal	Display terminal configuration parameters
user-privilege	Users privilege configuration
users	Display information about terminal lines
version	System hardware and software status
vlan	VLAN status
voice	Voice appliance attributes
web	Web

✓ Configure

To Enter configuration mode, you can use the "configure" command.

```
# configure ?
  terminal  Configure from the terminal
# configure terminal
(config)#
```

✓ Save-config

To save the current configuration settings to the Startup-Config, you can use the "save-config" command. This command can be used regardless of the mode.

```
# save-config
###: Running-config saved (by:1) !!!
###: Running-config saved !!!
# copy running-config startup-config
Building configuration...
% Saving 930 bytes to flash:startup-config
```

✓ **Copy running-config startup-config**

To save the running-configuration settings to the Startup-Config, you can use the “copy running-config startup-config” command.

This command can only be used in Privileged mode.

```
# copy running-config startup-config
Building configuration...
% Saving 930 bytes to flash:startup-config
```

✓ **Dir**

To view the Config file currently stored in Flash, you can use the 'dir' command.

```
# dir
Directory of flash:
  r- 1970-01-01 00:00:00   316 default-config
  rw 1970-01-01 07:43:36  1083 startup-config
2 files, 1399 bytes total.
```

6. Switch Management Guide

6.1. SYSTEM

6.1.1. System Configuration

6.1.1.1. Information

WEB MENU Configuration>System>Information

The switch system information is provided here.

System Information Configuration

System Contact	<input type="text"/>
System Name	<input type="text"/>
System Location	<input type="text"/>

System Information Configuration

Object	Description
System Contact	The textual identification of the contact person for this managed node, together with information on how to contact this person. The allowed string length is 0 to 255.
System Name	An administratively assigned name for this managed node. By convention, this is the node's fully-qualified domain name. A domain name is a text string drawn from the alphabet (A-Za-z), digits (0-9), minus sign (-). No space characters are permitted as part of a name. The first character must be an alpha character. And the first or last character must not be a minus sign. The allowed string length is 0 to 255.
System Location	The physical location of this node(for example, telephone closet, third floor). The allowed string length is 0 to 255, and the allowed content is the ASCII characters from 32 to 126.

Buttons

: Click to apply changes.

: Click to apply and save changes.

: Click to undo any changes made locally and revert to previously saved values.

```
(config)# snmp-server contact <line255>
(config)# snmp-server contact SOLTECH
```

✓ **System Name**

```
(config)# hostname <host_name>
(config)# hostname TESTSWITCH
```

✓ **System Location**

```
(config)# snmp-server location <line255>
(config)# snmp-server location SOLTECH-LAB
```

6.1.1.2. IP

WEB MENU Configuration>System>IP

Configure IP basic settings, control IP interfaces and IP routes.

IP Configuration

Mode	Host
DNS Server 0	No DNS server
DNS Server 1	No DNS server
DNS Server 2	No DNS server
DNS Server 3	No DNS server
DNS Proxy	<input type="checkbox"/>

IP Interfaces

Delete	VLAN	DHCPv4			IPv4		DHCPv6			IPv6	
		Enable	Fallback	Current Lease	Address	Mask Length	Enable	Rapid Commit	Current Lease	Address	Mask Length
<input type="checkbox"/>	1	<input type="checkbox"/>	0		192.168.10.101	24	<input type="checkbox"/>	<input type="checkbox"/>			

Add Interface

IP Routes

Delete	Network	Mask Length	Gateway	Next Hop VLAN
--------	---------	-------------	---------	---------------

Add Route

IP Configuration

Object	Description
Mode	Configure whether the IP stack should act as a Host or a Router.
DNS Server	This setting controls the DNS name resolution done by the switch.
DNS Proxy	When DNS proxy is enabled, system will relay DNS requests to the currently configured DNS server, and reply as a DNS resolver to the client devices on the network.

IP Interfaces

Object	Description
Delete	Select this option to delete an existing IP interface.
VLAN	The VLAN associated with the IP interface. Only ports in this VLAN will be able to access the IP interface.
IPv4 DHCP Enabled	Enable the DHCPv4 client by checking this box.
IPv4 DHCP Fallback Timeout	The number of seconds for trying to obtain a DHCP lease. After this period expires, a configured IPv4 address will be used as IPv4 interface address.
IPv4 DHCP Current Lease	For DHCP interfaces with an active lease, this column show the current interface address, as provided by the DHCP server.
IPv4 Address	The IPv4 address of the interface in dotted decimal notation.
IPv4 Mask	The IPv4 network mask, in number of bits (prefix length). Valid values are between 0 and 30 bits for a IPv4 address.
DHCPv6 Enable	Enable the DHCPv6 client by checking this box.
DHCPv6 Rapid Commit	Enable the DHCPv6 Rapid-Commit option by checking this box.
DHCPv6 Current Lease	For DHCPv6 interface with an active lease, this column shows the interface address provided by the DHCPv6 server.
IPv6 Address	The IPv6 address of the interface.
IPv6 Mask	The IPv6 network mask, in number of bits (prefix length). Valid values are between 1 and 128 bits for a IPv6 address.

IP Routes

Object	Description
Delete	Select this option to delete an existing IP route.
Network	The destination IP network or host address of this route.
Mask Length	The destination IP network or host mask, in number of bits (prefix length). It defines how much of a network address that must match, in order to qualify for this route. Valid values are between 0 and 32 bits respectively 128 for IPv6 routes.
Gateway	The IP address of the IP gateway.
Next Hop VLAN (Only for IPv6)	The VLAN ID (VID) of the specific IPv6 interface associated with the gateway. The given VID ranges from 1 to 4095 and will be effective only when the corresponding IPv6 interface is valid.

Buttons

Add Interface: Click to add a new IP interface. A maximum of 128 interfaces is supported.

Add Route: Click to add a new IP route. A maximum of 128 routes is supported.

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

(config)# ip name-server 0 dhcp ipv4
```

- From this DHCPv4 Interfaces

```
(config)# ip name-server <0-3> dhcp ipv4 interface vlan <vlan_id>
(config)# ip name-server 0 dhcp ipv4 interface vlan 1
```

- From any DHCPv6 Interfaces

```
(config)# ip name-server <0-3> dhcp ipv6
(config)# ip name-server 0 dhcp ipv6
```

- From this DHCPv6 Interfaces

```
(config)# ip name-server <0-3> dhcp ipv6 interface vlan <vlan_id>
(config)# ip name-server 0 dhcp ipv6 interface vlan 1
```

➤ **DNS Proxy**

```
(config)# ip dns proxy
```

✓ **IP Interfaces**

➤ **VLAN**

```
(config)# interface vlan <vlan_list>
(config)# interface vlan 1
```

➤ **DHCPv4**

- DHCPv4 fallback not set

```
(config)# interface vlan <vlan_list>
(config-if-vlan)# ip address dhcp
```

- DHCPv4 fallback setting.
(After this period expires, a configured IPv4 address will be used as IPv4 interface address.)

```
(config)# interface vlan <vlan_list>
```

```
(config-if-vlan)# ip address dhcp fallback <ipv4_addr> <ipv4_netmask>
timeout <uint>
(config-if-vlan)# ip address dhcp fallback 192.168.10.101 255.255.255.0
timeout 30
```

➤ **IPv4**

```
(config)# interface vlan <vlan_list>
(config-if-vlan)# ip address <ipv4_addr> <ipv4_netmask>
(config-if-vlan)# ip address 192.168.10.101 255.255.255.0
```

✓ **IP Routes**

➤ **Add Route**

- Use Default gateway(Sending all packets to the gateway)

```
(config)# ip route 0.0.0.0 0.0.0.0 <ipv4_addr>
(config)# ip route 0.0.0.0 0.0.0.0 192.168.10.1
```

- Use Static gateway(Sending packets of the respective network subnet to the gateway)

```
(config)# ip route <ipv4_addr> <ipv4_netmask> <ipv4_addr>
(config)# ip route 2.2.2.0 255.255.255.0 192.168.10.1
```

6.1.1.3. NTP

WEB MENU Configuration>System>NTP

Configure NTP on this page.

NTP Configuration

Mode	Disabled <input type="button" value="v"/>

System Information

Object	Description
System	Displays system information for the switch.
Contact	Displays switch identification information.
Name	Displays switch Name.
Location	Displays switch Location.
Hardware	Displays Hardware information for the switch.
MAC Address	The MAC Address of this switch.
Device Serial	The Serial Number of this switch.
Time	Displays Time information for the switch.
System Date	The current (GMT) system time and date. The system time is obtained through the Timing server running on the switch, if any.
System Uptime	The period of time the device has been operational.
Software	Displays Software information for the switch.
Software Version	The software version of this switch.
Software Data	The date when the switch software was produced.
System Temperature	Displays Temperature information for the switch.

Current	Displays the current internal temperature of switch.
Minimum	Displays the minimum internal temperature of switch.
Maximum	Displays the maximum internal temperature of switch.
Average	Displays the average internal temperature of switch.

```
Average load in 1 sec: 1%
```

```
Average load in 10 sec: 0%
```

6.1.2.3. IP Status

WEB MENU Monitor>System>IP Status

This page displays the status of the IP protocol layer. The status is defined by the IP interfaces, the IP routes and the neighbor cache (ARP cache) status.

IP Interfaces

Interface	Type	Address	Status
OS:lo	LINK	00-00-00-00-00-00	<UP LOOPBACK RUNNING MULTICAST>
OS:lo	IPv4	127.0.0.1/8	
OS:lo	IPv6	fe80::1/64	
OS:lo	IPv6	::1/128	
VLAN1	LINK	00-21-6d-00-87-32	<UP BROADCAST RUNNING MULTICAST>
VLAN1	IPv4	192.168.10.101/24	
VLAN1	IPv6	fe80::221:6dff:fe00:8732/64	

IP Routes

Network	Gateway	Status
127.0.0.1/32	127.0.0.1	<UP HOST>
224.0.0.0/4	127.0.0.1	<UP>
::1/128	::1	<UP HOST>

Neighbour cache

IP Address	Link Address
192.168.10.130	VLAN1:c0-18-50-7e-50-56
fe80::221:6dff:fe00:8732	VLAN1:00-21-6d-00-87-32

IP Interface

Object	Description
Interface	The name of the interface.
Type	The address type of the entry. This may be LINK or IPv4.
Address	The current address of the interface (of the given type).
Status	The status flags of the interface (and/or address).

IP Routes

Object	Description
Network	The destination IP network or host address of this route.
Gateway	The gateway address of this route.
Status	The status flags of the route.

Neighbour cache

Object	Description
IP Address	The IP address of the entry.
Link Address	The Link (MAC) address for which a binding to the IP address given exist..

Buttons

Auto-refresh : Check this box to refresh the page automatically. Automatic refresh every seconds.

: Click to refresh the page immediately.

EXAMPLE WEB MONITOR

IP Interfaces

Interface	Type	Address	Status

Port Power Saving Configuration

Object	Description
Optimize EEE for	The option is to configure the switch to optimize EEE. Latency: The option is to minimize traffic latency. Power: The option is to optimize power saving.

Port Configuration

Object	Description
Port	The switch port number of the logical port.
ActiPHY	ActiPHY works by lowering the power for a port when there is no link.
PerfectReach	PerfectReach works by determining the cable length and lowering the power for ports with short cables.
EEE	This controls whether EEE is enabled for this switch port. EEE (Ethernet Energy Efficiency) is a feature that allows network devices in an Ethernet network to transition into a low-power sleep mode when they are idle, based on the actual traffic demand on the network. This helps reduce power consumption.
EEE Urgent Queues	Queues set will activate transmission of frames as soon as data is available. Otherwise the queue will postpone transmission until a burst of frames can be transmitted.

Port Power Saving Status

Object	Description
Port	This is the logical port number for this row.
Link	Shows if the link is up for the port (green = link up, red = link down).
EEE cap	Shows if the port is EEE capable.
EEE Ena	Shows if EEE is enabled for the port.
LP EEE cap	Shows if the link partner is EEE capable.
EEE In power save	Shows if the system is currently saving power due to EEE.
ActiPhy Savings	Shows if the system is currently saving power due to ActiPhy.
PerfectReach Savings	Shows if the system is currently saving power due to PerfectReach.

Port Configuration

Object	Description
Port	This is the logical port number for this row.
Description	The description of the port. It is an ASCII string no longer than 256 characters .
Link	The current link state is displayed graphically. (Green = link up, Red = link down, Exclamation mark = link up but, speed configuration error.
SFP Module	Information about the module inserted into the SFP port
Speed – Current	Provides the current link speed of the port.
Speed – Configured	Selects any available link speed for the given switch port. Disabled - Disables the switch port operation. Auto - Port auto negotiating speed with the link partner and selects the highest speed that is compatible with the link partner. 10Mbps HDX - Forces the port in 10Mbps half duplex mode. 10Mbps FDX - Forces the port in 10Mbps full duplex mode. 100Mbps HDX - Forces the port in 100Mbps half duplex mode. 100Mbps FDX - Forces the port in 100Mbps full duplex mode. 1Gbps FDX - Forces the port in 1Gbps full duplex 2.5Gbps FDX - Forces the port in 2.5Gbps full duplex 10Gbps FDX - Forces the Serdes port in 10Gbps full duplex mode.
Advertise Duplex	When duplex is set as auto i.e auto negotiation, the port will only advertise the specified duplex as either Fdx or Hdx to the link partner. By default port will advertise all the supported duplexes if the Duplex is Auto.
Advertise Speed	When Speed is set as auto i.e auto negotiation, the port will only advertise the specified speeds (10M 100M 1G) to the link partner. By default port will advertise all the supported speeds if speed is set as Auto.

Flow Control	<p>When Auto Speed is selected on a port, this section indicates the flow control capability that is advertised to the link partner.</p> <p>When a fixed-speed setting is selected, that is what is used. The Current Rx column indicates whether pause frames on the port are obeyed, and the Current Tx column indicates whether pause frames on the port are transmitted. The Rx and Tx settings are determined by the result of the last Auto Negotiation.</p> <p>Check the configured column to use flow control. This setting is related to the setting for Configured Link Speed.</p> <p>NOTICE: The 100FX standard doesn't support Auto Negotiation, so when in 100FX mode the flow control capabilities will always be shown as "disabled".</p>
PFC	<p>When PFC (802.1Qbb Priority Flow Control) is enabled on a port then flow control on a priority level is enabled. Through the Priority field, range (one or more) of priorities can be configured, e.g. '0-3,7' which equals '0,1,2,3,7'. PFC is not supported through auto negotiation. PFC and Flowcontrol cannot both be enabled on the same port.</p>
Maximum Frame Size	<p>Enter the maximum frame size allowed for the switch port, including FCS. The range is 1518-10240 bytes.</p>
Excessive Collision Mode	<p>Configure port transmit collision behavior.</p> <p>Discard: Discard frame after 16 collisions (default).</p> <p>Restart: Restart backoff algorithm after 16 collisions.</p>
Frame Length Check	<p>Configures if frames with incorrect frame length in the EtherType/Length field shall be dropped. An Ethernet frame contains a field EtherType which can be used to indicate the frame payload size (in bytes) for values of 1535 and below. If the EtherType/Length field is above 1535, it indicates that the field is used as an EtherType (indicating which protocol is encapsulated in the payload of the frame). If "frame length check" is enabled, frames with payload size less than 1536 bytes are dropped, if the EtherType/Length field doesn't match the actually payload length. If "frame length check" is disabled, frames are not dropped due to frame length mismatch. Note: No drop counters count frames dropped due to frame length mismatch</p>

EXAMPLE CLI CONFIGURATION

✓ Port Configuration

➤ Description

```
(config)# interface 10GigabitEthernet/ GigabitEthernet <port_type_list>
(config)# interface GigabitEthernet 1/1

(config-if)# description <line>
(config-if)# description H/W TEAM
```

➤ **Speed Configured**

Auto-negotiation is the default value, and other values are fixed. (speed, duplex)

```
(config)# interface 10GigabitEthernet/ GigabitEthernet <port_type_list>
(config)# interface GigabitEthernet 1/1

(config-if)# speed <auto/10g/1000/100/10>
(config-if)# speed auto
(config-if)# speed 100

(config-if)# duplex <auto/full/half>
(config-if)# duplex auto
(config-if)# duplex full
```

➤ **Advertise Duplex**

For UTP ports, only Speed Auto can be configured, and Full duplex is prioritized and communicated to the link partner.

```
(config)# interface GigabitEthernet <port_type_list>
(config)# interface GigabitEthernet 1/1

(config-if)# speed auto

(config-if)# duplex auto <full/half/cr>
(config-if)# duplex auto
(config-if)# duplex auto full
```

➤ **Advertise Speed**

For UTP ports, only Speed Auto can be configured, and the higher speed is prioritized and communicated to the link partner.

```
(config)# interface GigabitEthernet <port_type_list>
(config)# interface GigabitEthernet 1/1

(config-if)# speed auto <10/100/1000>
(config-if)# speed auto 10 100
(config-if)# speed auto 1000 100

(config-if)# duplex auto
```

➤ **Flow Control**

- Flow Control Disable(default)

```
(config)# interface 10GigabitEthernet/GigabitEthernet <port_type_list>
(config)# interface GigabitEthernet 1/1

(config-if)# flowcontrol off
```

- Flow Control Enable

```
(config)# interface 10GigabitEthernet/GigabitEthernet <port_type_list>
(config)# interface GigabitEthernet 1/1

(config-if)# flowcontrol on
```

➤ **PFC**

• **Enable, Priority**

```
(config)# interface 10GigabitEthernet/GigabitEthernet <port_type_list>
(config)# interface GigabitEthernet 1/1

(config-if)# priority-flowcontrol prio <0~7>
(config-if)# priority-flowcontrol prio 0-7
(config-if)# priority-flowcontrol prio 1,3,7
```

• **Disable, Priority**

```
(config)# interface 10GigabitEthernet/GigabitEthernet <port_type_list>
(config)# interface GigabitEthernet 1/1

(config-if)#no priority-flowcontrol prio <0~7>
(config-if)#no priority-flowcontrol prio 0-7

6.3.2.4. QCL Status

WEB MENU Monitor>Ports>QCL Status

This page shows the QCL status by different QCL users. Each row describes the QCE that is defined. It is a conflict if a specific QCE is not applied to the hardware due to hardware limitations. The maximum number of QCEs is 256 on each switch.

QoS Control List Status

User	QCE	Port	Frame Type	Action						Conflict
				CoS	DPL	DSCP	PCP	DEI	Policy	
No entries										

QoS Control List Status

Object	Description
User	Indicates the QCL user.
QCE	Indicates the QCE id.
Port	Indicates the list of ports configured with the QCE.
Frame Type	Indicates the type of frame. Any Match any frame type. Ethernet Match EtherType frames. LLC Match (LLC) frames. SNAP Match (SNAP) frames. IPv4 Match IPv4 frames. IPv6 Match IPv6 frames.
Action	Indicates the classification action taken on ingress frame if parameters configured are matched with the frame's content. CoS Classify Class of Service. DPL Classify Drop Precedence Level. DSCP Classify DSCP value. PCP Classify PCP value. DEI Classify DEI value. Policy Classify ACL Policy number.
Conflict	Displays Conflict status of QCL entries. As H/W resources are shared by multiple applications. It may happen that resources required to add a QCE may not be available, in that case it shows conflict status as 'Yes', otherwise it is always 'No'. Please note that conflict can be resolved by releasing the H/W resources required to add QCL entry on pressing 'Resolve Conflict' button.

Buttons

: Select the QCL status from this drop down list.

Auto-refresh : Check this box to refresh the page automatically. Automatic refresh every 3 seconds.

Resolve Conflict: Click to release the resources required to add QCL entry, in case the conflict status for any QCL entry is 'yes'.

Refresh: Click to refresh the page.

6.3.2.5. Detailed Statistics

WEB MENU Monitor>Ports>Detailed Statistics

This page provides detailed traffic statistics for a specific switch port.

(Use the port select box to select which switch port details to display.)

Detailed Port Statistics Port n

Object	Description
Receive and Transmit Total	Display information about the total received and transmitted packets.
Rx and Tx Packets	The number of received and transmitted packets.
Rx and Tx Octets	The number of received and transmitted bytes.
Rx and Tx Unicast	The number of received and transmitted unicast packets.
Rx and Tx Multicast	The number of received and transmitted multicast packets.
Rx and Tx Broadcast	The number of received and transmitted broadcast packets.
Rx and Tx Pause	A count of the MAC Control frames received or transmitted on this port that have an opcode indicating a PAUSE operation.
Receive and Transmit Size Counters	The number of received and transmitted packets split into categories based on their respective frame sizes.
Receive and Transmit Queue Counters	The number of received and transmitted packets per input and output queue.
Receive and Transmit Error Counters	The number of received and transmitted packets, classified as errors.
Rx Drops	The number of frames dropped due to lack of receive buffers or egress congestion.
Rx CRC/Alignment	The number of frames received with CRC or alignment errors.
Rx Undersize	The number of short frames received with valid CRC.
Rx Oversize	The number of long frames received with valid CRC.
Rx Fragments	The number of short frames received with invalid CRC.
Rx Jabber	The number of long frames received with invalid CRC.

Rx Filtered	The number of received frames filtered by the forwarding process.
Tx Drops	The number of frames dropped due to output buffer congestion.
Tx Late/Exc.	The number of frames dropped due to excessive or late collisions.

Buttons

6.4. DHCP

6.4.1. DHCP Configuration

6.4.1.1. Server Mode

WEB MENU Configuration>DHCP>Server>Mode

This page configures global mode and VLAN mode to enable/disable DHCP server per system and per VLAN.

DHCP Server Mode Configuration

Global Mode

Mode Disabled ▾

VLAN Mode

Delete VLAN Range Mode

Add VLAN Range

DHCP Server Mode Configuration

Global Mode

Object	Description
Mode	Configure the operation mode per system Enabled: Enable DHCP server per system. Disabled: Disable DHCP server per system.

VLAN Mode

Object	Description
VLAN Range	Indicate the VLAN range in which DHCP server is enabled or disabled. The first VLAN ID must be smaller than or equal to the second VLAN ID. BUT, if the VLAN range contains only 1 VLAN ID, then you can just input it into either one of the first and second VLAN ID or both. On the other hand, if you want to disable existed VLAN range, then you can follow the steps. 1. press to add a new VLAN range. 2. input the VLAN range that you want to disable. 3. choose Mode to be Disabled. 4. press to apply the change.
Mode	Indicate the operation mode per VLAN. Enabled: Enable DHCP server per VLAN. Disabled: Disable DHCP server pre VLAN.

Buttons

Add VLAN Range: Click to add a new VLAN range.

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

6.4.1.2. Server Excluded IP

WEB MENU Configuration>DHCP>Server>Excluded IP

This page configures excluded IP addresses.

DHCP server will not allocate these excluded IP addresses to DHCP client.

DHCP Server Excluded IP Configuration

Excluded IP Address

DHCP Server Excluded IP Configuration

Excluded IP Address

Object	Description
IP Range	Define the IP range to be excluded IP addresses. The first excluded IP must be smaller than or equal to the second excluded IP. BUT, if the IP range contains only 1 excluded IP, then you can just input it to either one of the first and second excluded IP or both.

Buttons

: Click to add a new excluded IP range.

: Click to apply changes.

: Click to apply and save changes.

: Click to undo any changes made locally and revert to previously saved values.

EXAMPLE WEB CONFIGURATION

✓ Excluded IP Address

➤ Add IP Range

• IP Range

DHCP Server Excluded IP Configuration

Excluded IP Address

Delete	IP Range
<input type="button" value="Delete"/>	192.168.10.1 - 192.168.10.101
<input type="button" value="Delete"/>	192.168.10.103 - 192.168.10.130

DHCP Server Excluded IP Configuration

Delete	IP Range
<input type="checkbox"/>	192.168.10.1 - 192.168.10.101
<input type="checkbox"/>	192.168.10.103 - 192.168.10.130

EXAMPLE CLI CONFIGURATION

✓ **Excluded IP Address**

➤ **Add IP Range**

• **IP Range**

```
(config)# ip dhcp excluded-address <ipv4_addr> <ipv4_addr>  
(config)# ip dhcp excluded-address 192.168.10.1 192.168.10.101  
(config)# ip dhcp excluded-address 192.168.10.103 192.168.10.130
```

6.4.1.3. Server Pool

WEB MENU Configuration>DHCP>Server>Pool

This page manages DHCP pools.

According to the DHCP pool, DHCP server will allocate IP address and deliver configuration parameters to DHCP client.

DHCP Server Pool Configuration

Pool Setting

Delete	Name	Type	IP	Subnet Mask	Lease Time
--------	------	------	----	-------------	------------

DHCP Server Pool Configuration

Pool Setting

Object	Description
Name	Configure the pool name that accepts all printable characters, except white space. If you want to configure the detail settings, you can click the pool name to go into the configuration page.
Type	Display which type of the pool is. Network: the pool defines a pool of IP addresses to service more than one DHCP client. Host: the pool services for a specific DHCP client identified by client identifier or hardware address.
IP	Display network number of the DHCP address pool.
Subnet Mask	Display subnet mask of the DHCP address pool.
Lease Time	Display lease time of the pool.

Buttons

: Click to add a new DHCP pool.

: Click to apply changes.

: Click to apply and save changes.

: Click to undo any changes made locally and revert to previously saved values.

DHCP Pool Configuration

This page configures all settings of a DHCP pool.

DHCP Pool Configuration

Pool

Object	Description
Name	Select a pool by pool name.

Setting

Object	Description
Pool Name	Display the selected pool name.
Type	Specify which type of the pool is. Network: the pool defines a pool of IP addresses to service more than one DHCP client. Host: the pool services for a specific DHCP client identified by client identifier or hardware address.
IP	Specify network number of the DHCP address pool.
Subnet Mask	Specify subnet mask of the DHCP address pool.

Lease Time	Specify lease time that allows the client to request a lease time for the IP address.(If all are 0's, then it means the lease time is infinite.)
Domain Name	Specify domain name that client should use when resolving hostname via DNS.
Broadcast Address	Specify the broadcast address in use on the client's subnet.
Default Router	Specify a list of IP addresses for routers on the client's subnet.
DNS Server	Specify a list of Domain Name System name servers available to the client.
NTP Server	Specify a list of IP addresses indicating NTP servers available to the client.
NetBIOS Node Type	Specify NetBIOS node type option to allow Netbios over TCP/IP clients which are configurable to be configured as described in RFC 1001/1002.
NetBIOS Scope	Specify the NetBIOS over TCP/IP scope parameter for the client as specified in RFC 1001/1002.
NetBIOS Name Server	Specify a list of NBNS name servers listed in order of preference.
NIS Domain Name	Specify the name of the client's NIS domain.
NIS Server	Specify a list of IP addresses indicating NIS servers available to the client.
Client Identifier	Specify client's unique identifier to be used when the pool is the type of host.
Hardware Address	Specify client's hardware(MAC) address to be used when the pool is the type of host.
Client Name	Specify the name of client to be used when the pool is the type of host.
Vendor/Class Identifier	Specify to be used by DHCP client to optionally identify the vendor type and configuration of a DHCP client. DHCP server will deliver the corresponding specific information to the client that sends vendor class identifier.
Vendor/Specific Information	Specify vendor specific information according to vendor class identifier.

Buttons

: Click to apply changes.

: Click to apply and save changes.

: Click to undo any changes made locally and revert to previously saved values.

6.5. SECURITY

6.5.1. Switch Configuration

The product provides authentication capabilities for both local administrators and users, granting permissions based on account-specific privilege levels.

User Accounts and Permissions:

Multiple users can be created on the switch, identified by their usernames and corresponding privilege levels.

The permission levels for user access range from 1 to 15. A privilege level of 15 allows access to all groups and grants full control over the device. User privileges must be equal to or higher than the privilege level of the group. By default, privilege level 5 provides read-only access, while privilege level 10 grants read-write access to most groups. System maintenance tasks such as software uploads and factory default restoration require privilege level 15. Typically, administrator accounts have privilege level 15, regular user accounts have privilege level 10, and guest accounts have privilege level 5.

The names identifying the permission groups are referred to as group names. In most cases, permission level groups consist of a single module (e.g., LACP, RSTP, or QoS), but some may include more than one.

Each group has authentication privilege levels ranging from 1 to 15 for the following subgroups:

- Configuration read-only
- Configuration/Execution read-write
- Status/Statistics read-only
- Status/Statistics read-write (e.g., clear statistics)

Group privilege levels are used only in the web interface. CLI privilege levels function within each individual command. User privileges must be greater than or equal to the privilege level of the group.

6.5.1.1. Users

WEB MENU Configuration>Security>Switch>Users

This page provides an overview of the current users.

Currently the way to login as another user on the web server is to close and reopen the browser or use the "Logout" option in the top right corner.

Users Configuration

User Name	Privilege Level
admin	15

Add New User

Users Configuration

Object	Description
User Name	The name identifying the user. This is also a link to Add/Edit User.
Privilege Level	The privilege level of the user. The allowed range is 0 to 15. If the privilege level value is 15, it can access all groups, i.e. that is granted the fully control of the device. But others value need to refer to each group privilege level. User's privilege should be same or greater than the group privilege level to have the access of that group. By default setting, most groups privilege level 5 has the read-only access and privilege level 10 has the read-write access. And the system maintenance (software upload, factory defaults and etc.) need user privilege level 15. Generally, the privilege level 15 can be used for an administrator account, privilege level 10 for a standard user account and privilege level 5 for a guest account.

Buttons

: Click to add a new user.

When put the  buttons, User setting page will be appeared.

Add User

This page configures a user.

Add User

User Settings	
User Name	<input type="text"/>
Password	<input type="password"/>
Password (again)	<input type="password"/>
Privilege Level	0 <input type="text"/>

Add User

Object	Description
User Name	A string identifying the user name that this entry should belong to. The allowed string length is 1 to 31. The valid user name allows letters, numbers and underscores.
Password	The password of the user. The allowed string length is 0 to 63. Any printable characters including space is accepted. In the case of products with security Switch, please refer to the "Information > Secure Information" section under the WEB menu for configuration.
Privilege Level	The privilege level of the user. The allowed range is 0 to 15. If the privilege level value is 15, it can access all groups, i.e. that is granted the fully control of the device. But others value need to refer to each group privilege level. User's privilege should be same or greater than the group privilege level to have the access of that group. By default setting, most groups privilege level 5 has the read-only access and privilege level 10 has the read-write access. And the system maintenance (software upload, factory defaults and etc.) need user privilege level 15. Generally, the privilege level 15 can be used for an

	administrator account, privilege level 10 for a standard user account and privilege level 5 for a guest account.

console	no ▼		<input type="checkbox"/>
telnet	no ▼		<input type="checkbox"/>
ssh	no ▼		<input type="checkbox"/>

Authentication Method Configuration

Object	Description
Authentication Method Configuration	You can configure how a user is authenticated when they log into the switch via one of the management client interfaces.
Client	The management client for which the configuration below applies.
Methods	<p>Method can be set to one of the following values:</p> <p>no Authentication is disabled and login is not possible.</p> <hr/> <p>local Use the local user database on the switch for authentication.</p> <hr/> <p>radius Use remote RADIUS server(s) for authentication.</p> <hr/> <p>tacacs Use remote TACACS+ server(s) for authentication.</p> <p>Methods that involves remote servers are timed out if the remote servers are offline. In this case the next method is tried. Each method is tried from left to right and continues until a method either approves or rejects a user. (If a local configuration is available, you can still configure it directly even if the servers are not operational.)</p>

Command Authorization Method Configuration

Object	Description
Command Authorization Method Configuration	The command authorization section allows you to limit the CLI commands available to a user.
Client	The management client for which the configuration below applies.
Method	<p>Method can be set to one of the following values:</p> <p>no Command authorization is disabled. User is granted access to CLI commands according to his privilege level.</p> <hr/> <p>tacacs Use remote TACACS+ server(s) for command authorization. If all remote servers are offline, the user is</p>

	granted access to CLI commands according to his privilege level.
Cmd Lvl	Authorize all commands with a privilege level higher than or equal to this level. Valid values are in the range 0 to 15.
Cfg Cmd	Also authorize configuration commands.

Accounting Method Configuration

Object	Description
Accounting Method Configuration	The accounting section allows you to configure command and exec (login) accounting.
Client	The management client for which the configuration below applies.
Method	Method can be set to one of the following values: no Accounting is disabled. tacacs Use remote TACACS+ server(s) for accounting.
Cmd Lvl	Enable accounting of all commands with a privilege level higher than or equal to this level. Valid values are in the range 0 to 15. Leave the field empty to disable command accounting.
Exec	Enable exec (login) accounting.

6.5.1.6. HTTPS

WEB MENU Configuration>Security>Switch>HTTPS

This page allows you to configure the HTTPS settings and maintain the current certificate on the switch.

HTTPS Configuration

Mode	Enabled	▼
Automatic Redirect	Enabled	▼
Certificate Maintain	None	▼
Certificate Status	Switch secure HTTP certificate is presented	

HTTPS Configuration

Object	Description
Mode	Indicate the HTTPS mode operation. Enabled: Enabled HTTPS mode operation. Disabled: Disabled HTTPS mode operation.(Web access may not be available.)
Automatic Redirect	Indicate the HTTPS redirect mode operation. When HTTPS mode is enabled and the redirection mode is enabled, HTTP connections will be automatically redirected to HTTPS connections. Enabled: Enable HTTPS redirect mode operation. Disabled: Disable HTTPS redirect mode operation.
Certificate Maintain	The operation of certificate maintenance. (The security device can only use this feature in CLI.) None: No operation. Delete: Delete the current certificate. Upload: Upload a certificate PEM file. (Possible methods are: Web Browser or URL.) Generate: Generate a new self-signed RSA certificate.
Certificate Pass Phrase	Enter the pass phrase in this field if your uploading certificate is protected by a specific passphrase. (Select "Upload" in the "Certificate Maintain" section, it will be available.)
Certificate Upload	Upload a certificate PEM file into the switch. The file should contain the certificate and private key together. If you have two separated files for saving certificate and private key. Use the Linux cat command to combine them into a single PEM file. For example, <code>cat my.cert my.key > my.pem</code> Notice that the RSA certificate is recommended since most of the new version of browsers has removed support for DSA in certificate, e.g. Firefox v37 and Chrome v39. Possible methods are: Web Browser: Upload a certificate via Web browser. URL: Upload a certificate via URL, the supported protocols are HTTP, HTTPS, TFTP and FTP. The URL format is <protocol>://[<username>[:<password>]@]<host>[:<port>][/<path>]/<file_name>. For example, <code>tftp://10.10.10.10/new_image_path/new_image.dat</code> , <code>http://username:password@10.10.10.10:80/new_image_path/new_image.dat</code> . A valid file name is a text string drawn from alphabet (A-Za-z), digits (0-9), dot (.), hyphen (-), under score (_). The maximum length is 63 and hyphen must not be first character. The file name content that only contains '!' is not allowed.

Certificate Status	Display the current status of certificate on the switch. Switch secure HTTP certificate is presented. Switch secure HTTP certificate is not presented. Switch secure HTTP certificate is generating.

6.5.1.8.2. Trap

WEB MENU Configuration>Security>SNMP>Trap

Configure SNMP trap on this page.

Trap Configuration

Global Settings

Mode

Trap Destination Configurations

Delete	Name	Enable	Version	Destination Address	Destination Port
--------	------	--------	---------	---------------------	------------------

Trap Configuration

Global Setting

Object	Description
Mode	Indicates the trap mode operation. Enabled: Enable SNMP trap mode operation. Disabled: Disable SNMP trap mode operation.

Trap Destination Configurations

Object	Description
Name	Indicates the trap Configuration's name. Indicates the trap destination's name.
Enable	Indicates the trap destination mode operation. Enabled: Enable SNMP trap mode operation. Disabled: Disable SNMP trap mode operation.
Version	Indicates the SNMP trap supported version. SNMPv1: Set SNMP trap supported version 1. SNMPv2c: Set SNMP trap supported version 2c. SNMPv3: Set SNMP trap supported version 3.
Destination Address	Indicates the SNMP trap destination address. It allow a valid IP address in dotted decimal notation ('x.y.z.w'). And it also allow a valid hostname. A valid hostname is a string drawn from the alphabet (A-Za-z), digits (0-9), dot (.), dash (-). Spaces are not allowed, the first character must be an alpha character, and the first and last characters must not be a dot or a dash. Indicates the SNMP trap destination IPv6 address. IPv6 address is in 128-bit records represented as eight fields of up to four hexadecimal digits with a colon separating each field (:). For example, 'fe80::215:c5ff:fe03:4dc7'. The symbol '::' is a special syntax that can be used as a shorthand way of representing multiple 16-bit groups of contiguous zeros; but it can appear only once. It can also represent a legally valid IPv4 address. For example, '::192.1.2.34'.
Destination port	Indicates the SNMP trap destination port. SNMP Agent will send SNMP message via this port, the port range is 1-65535.

Buttons

Add New Entry: Click to add a new user.

(Clicking on the button will open the SNMP Trap Configuration window.)

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

SNMP Trap Detailed Configuration

Configure trap detailed configuration on this page.

Switch	<input type="checkbox"/> * <input type="checkbox"/> STP <input type="checkbox"/> RMON

SNMP Trap Configuration

Object	Description
Trap Config Name	Indicates which trap Configuration's name for configuring.
Trap Mode	Indicates the SNMP mode operation. Enabled: Enable SNMP mode operation. Disabled: Disable SNMP mode operation.
Trap Version	Indicates the SNMP supported version. SNMP v1: Set SNMP supported version 1. SNMP v2c: Set SNMP supported version 2c. SNMP v3: Set SNMP supported version 3.
Trap Community	Indicates the community access string when sending SNMP trap packet. The allowed string length is 0 to 255, and the allowed content is ASCII characters from 33 to 126.
Trap Destination Address	Indicates the SNMP trap destination address. It allow a valid IP address in dotted decimal notation ('x.y.z.w'). And it also allow a valid hostname. A valid hostname is a string drawn from the alphabet (A-Za-z), digits (0-9), dot (.), dash (-). Spaces are not allowed,

	the first character must be an alpha character, and the first and last characters must not be a dot or a dash.
Trap Destination port	Indicates the SNMP trap destination port. SNMP Agent will send SNMP message via this port, the port range is 1~65535.
Trap Inform Mode	Indicates the SNMP trap inform mode operation. Enabled: Enable SNMP trap inform mode operation. Disabled: Disable SNMP trap inform mode operation.
Trap Inform Timeout	Indicates the SNMP trap inform timeout. The allowed range is 0 to 2147.
Trap Inform Retry Times	Indicates the SNMP trap inform retry times. The allowed range is 0 to 255.
Trap Probe Security Engine ID	Indicates the SNMP trap probe security engine ID mode of operation. Enabled: Enable SNMP trap probe security engine ID mode of operation. Disabled: Disable SNMP trap probe security engine ID mode of operation.
Trap Security Engine ID	Indicates the SNMP trap security engine ID. SNMPv3 sends traps and informs using USM for authentication and privacy. A unique engine ID for these traps and informs is needed. When "Trap Probe Security Engine ID" is enabled, the ID will be probed automatically. Otherwise, the ID specified in this field is used. The string must contain an even number(in hexadecimal format) with number of digits between 10 and 64, but all-zeros and all-'F's are not allowed.
Trap Security Name	Indicates the SNMP trap security name. SNMPv3 traps and informs using USM for authentication and privacy. A unique security name is needed when traps and informs are enabled.

SNMP Trap Event

Object	Description
System	Enable/disable that the Interface group's traps. Warm Start: Enable/disable Warm Start trap. Cold Start: Enable/disable Cold Start trap.
Interface	Indicates that the Interface group's traps. (Indicates that the SNMP entity is permitted to generate authentication failure traps.) Link Up: Enable/disable Link up trap. Link Down: Enable/disable Link down trap. LLDP: Enable/disable LLDP trap.
Authentication	Indicates that the authentication group's traps. SNMP Authentication Fail : Enable/disable SNMP trap authentication failure trap.
Switch	Indicates that the Switch group's traps. STP: Enable/disable STP trap. RMON: Enable/disable RMON trap.

6.5.1.8.3. Communities

WEB MENU Configuration>Security>SNMP>Communities

Configure SNMPv3 community table on this page. The entry index key is Community.

SNMPv3 Community Configuration

Delete	Community	Source IP	Source Mask
<input type="checkbox"/>	def_ro_pwd	0.0.0.0	0.0.0.0
<input type="checkbox"/>	def_rw_pwd	0.0.0.0	0.0.0.0

SNMPv3 Community Configuration

Object	Description
Delete	Check to delete the entry. It will be deleted during the next save.
Community	Indicates the community access string to permit access to SNMPv3 agent. The community string will be treated as security name and map a SNMPv1 or SNMPv2c community string. (This entry influences the Groups .)
Source IP	Indicates the SNMP access source address. A particular range of source addresses can be used to restrict source subnet when combined with source mask.
Source Mask	Indicates the SNMP access source address mask.

Buttons

Add New Entry: Click to add a new community entry.

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

```

6.5.1.8.4. Users

WEB MENU Configuration>Security>SNMP>Users

Configure SNMPv3 user table on this page. The entry index keys are Engine ID and User Name.

SNMPv3 User Configuration

Delete	Engine ID	User Name	Security Level	Authentication Protocol	Authentication Password	Privacy Protocol	Privacy Password
<input type="checkbox"/>	800007e5017f000001	default_user	NoAuth, NoPriv	None	None	None	None

SNMPv3 User Configuration

Object	Description
Delete	Check to delete the entry. It will be deleted during the next save.
Engine ID	<p>An octet string identifying the engine ID that this entry should belong to. The string must contain an even number(in hexadecimal format) with number of digits between 10 and 64, but all-zeros and all-'F's are not allowed. The SNMPv3 architecture uses the User-based Security Model (USM) for message security and the View-based Access Control Model (VACM) for access control. For the USM entry, the usmUserEngineID and usmUserName are the entry's keys.</p> <p>In a simple agent, usmUserEngineID is always that agent's own snmpEngineID value. The value can also take the value of the snmpEngineID of a remote SNMP engine with which this user can communicate.</p> <p>In other words, if user engine ID equal system engine ID then it is local user; otherwise it's remote user.</p>
User Name	A string identifying the user name that this entry should belong to. The allowed string length is 1 to 32, and the allowed content is ASCII characters from 33 to 126. (This entry influences the Groups .)
Security Level	<p>Indicates the security model that this entry should belong to.</p> <p>NoAuth, NoPriv No authentication and no privacy.</p> <hr/> <p>Auth, NoPriv Authentication and no privacy.</p> <hr/> <p>Auth, Priv Authentication and privacy.</p> <p>The value of security level cannot be modified if entry already exists. That means it must first be ensured that the value is set correctly.</p>
Authentication Protocol	<p>Indicates the authentication protocol that this entry should belong to.</p> <p>None No authentication protocol.</p> <hr/> <p>SHA An optional flag to indicate that this user uses SHA authentication protocol.</p> <p>The value of security level cannot be modified if entry already exists. That means must first ensure that the value is set correctly.</p>
Authentication Password	A string identifying the authentication password phrase. For SHA authentication protocol, the allowed string length is 8 to 40. The allowed content is ASCII characters from 33 to 126.
Privacy Protocol	<p>Indicates the privacy protocol that this entry should belong to.</p> <p>None No privacy protocol.</p> <hr/> <p>AES An optional flag to indicate that this user uses AES authentication protocol.</p>

Privacy Password	A string identifying the privacy password phrase. The allowed string length is 8 to 32, and the allowed content is ASCII characters from 33 to 126.

test_view
```

6.5.2. Network Configuration

6.5.2.1. Limit Control

WEB MENU Configuration>Security>Network>Limit Control

This page allows you to configure the Port Security Limit Control system and port settings.

You can set up port security aging for each system.

Limit Control allows for limiting the number of users on a given port. A user is identified by a MAC address and VLAN ID. If Limit Control is enabled on a port, the limit specifies the maximum number of users on the port. If this number is exceeded, an action is taken. The action can be one of the four different actions as described below.

- None, Trap, Shutdown, Trap and Shutdown

Switches are configured based on the total number of MAC addresses brought in by all ports when a new MAC address is detected on a port with port security enabled. Since all ports draw from the same pool, there could be instances where the configured maximum cannot be assigned if the remaining ports have already utilized all available MAC addresses.

The Limit Control module utilizes a lower-layer module, Port Security module, which manages MAC addresses learnt on the port.

The Limit Control configuration consists of two sections, a system- and a port-wide.

Port Security Limit Control Configuration

System Configuration

Mode	Disabled ▾
Aging Enabled	<input type="checkbox"/>
Aging Period	3600 seconds

Port Security Limit Control Configuration

System Configuration

Object	Description
Mode	Indicates if Limit Control is globally enabled or disabled on the switch. If globally disabled limit checks and corresponding actions are disabled.
Aging Enabled	If checked, secured MAC addresses are subject to aging as discussed under Aging Period.
Aging Period	If Aging Enabled is checked, then the aging period is controlled with this input. If other modules are using the underlying port security for securing MAC addresses, underlying port security will use the shorter requested aging period of all modules that use the functionality. (The Aging Period can be set to a number between 10 and 9,999,999 seconds.)

Port Configuration

Object	Description						
Port	The port number to which the configuration below applies.						
Mode	Controls whether Limit Control is enabled on this port. Both this and the Global Mode must be set to Enabled for Limit Control to be in effect. Notice that other modules may still use the underlying port security features without enabling Limit Control on a given port.						
Limit	The maximum number of MAC addresses that can be secured on this port. This number cannot exceed 1024. If the limit is exceeded, the corresponding action is taken. The switch has a total number of MAC addresses and since all ports draw from the same pool, it is possible that a configured maximum cannot be granted if all available MAC addresses have already been used by the remaining ports.						
Action	If MAC address Limit is reached, the switch can take one of the actions: <table border="0" style="width: 100%;"> <tr> <td style="vertical-align: top;">None</td> <td>Do not allow more than Limit MAC addresses on the port, but take no further action.</td> </tr> <tr> <td style="vertical-align: top;">Trap</td> <td>If Limit + 1 MAC addresses is seen on the port, send an SNMP trap. If Aging is disabled, only one SNMP trap will be sent, but with Aging enabled, new SNMP traps will be sent every time the limit gets exceeded.</td> </tr> <tr> <td style="vertical-align: top;">Shutdown</td> <td>If Limit + 1 MAC addresses is seen on the port, shut down the port. This implies that all secured MAC addresses will be removed from the port, and no new address will be learned. Even if the link is physically disconnected and reconnected on the port (by disconnecting the cable), the port will remain shut down. There are three ways to re-open the port: 1) Boot the switch, 2) Disable and re-enable Limit Control on the port or the</td> </tr> </table>	None	Do not allow more than Limit MAC addresses on the port, but take no further action.	Trap	If Limit + 1 MAC addresses is seen on the port, send an SNMP trap. If Aging is disabled, only one SNMP trap will be sent, but with Aging enabled, new SNMP traps will be sent every time the limit gets exceeded.	Shutdown	If Limit + 1 MAC addresses is seen on the port, shut down the port. This implies that all secured MAC addresses will be removed from the port, and no new address will be learned. Even if the link is physically disconnected and reconnected on the port (by disconnecting the cable), the port will remain shut down. There are three ways to re-open the port: 1) Boot the switch, 2) Disable and re-enable Limit Control on the port or the

(config-if)# port-security violation trap-shutdown
```

6.5.2.2. ACL

ACL (Access Control List) is composed of ACE (Access Control Entry) entries that specify individual users or groups allowed access to specific traffic entities such as processes or programs. ACE parameters vary depending on the selected frame type.

Each accessible traffic entity includes an identifier for its corresponding ACL. Permissions determine whether specific traffic entities have access rights.

Implementing ACLs can become highly complex, for instance, when prioritizing ACEs for various scenarios. In networking, ACLs represent lists of service ports or network service offerings available on hosts or servers. Each service has a list of allowed host or server entries for service usage. ACLs are typically configured to control inbound traffic, and in this context, ACLs share similarities with firewalls.

There are three configurable sections related to manual ACL configuration.

ACL configuration displays ACEs in a top-to-bottom priority manner, from highest (top) to lowest (bottom). Incoming frames hit only one ACE, even if multiple matching ACEs exist. The first matching ACE performs the action (permit/deny) for that frame, and the associated counter increments. ACEs can be associated with all combinations of incoming port and policy (value/mask pair). Once ACE policies are created, they can be linked with port groups as part of ACL port configuration. Multiple parameters can be configured with ACEs.

ACL port configuration is used to assign policy IDs to incoming ports, useful for grouping ports to follow the same traffic rules. Traffic policies are generated in ACL configuration. For each incoming port, the following traffic attributes can be set:

- Action
- Rate Limiter
- Port Redirection
- Mirroring
- Logging
- Termination

The management interface allows you to enable forwarding (Permit) or deny forwarding (Deny) on a port, determining whether traffic is allowed to pass through. The default action is Permit.

ACEs are applied only if frames do not match and pass through ACE matches. In this case, the counter associated with that port increases. There can be up to 16 different ACL rate limiters. Rate limiter IDs can be assigned to ACE(s) or incoming port(s).

ACEs are configured with multiple parameters, which vary depending on the selected frame type. Incoming ports must select the next frame type chosen for ACE. Different parameter options are displayed based on the chosen frame type. Supported frame types include:

- Any
- Configurable Ethernet types
- ARP
- IPv4
- IPv6

MAC-based filtering and IP protocol-based filtering can be achieved through configuration based on the appropriate frame type selection.

6.5.2.2.1. Ports

WEB MENU Configuration>Security>Network>ACL>Ports

Configure the ACL parameters (ACE) of each switch port. These parameters will affect frames received on a port unless the frame matches a specific ACE.

ACL Ports Configuration

Port	Policy ID	Action	Rate Limiter ID	Port Redirect	Mirror	Logging	Shutdown	State	Counter

ACL Ports Configuration

Object	Description
Port	The logical port for the settings contained in the same row.
Policy ID	Select the policy to apply to this port. The allowed values are 0 through 255. The default value is 0.
Action	Select whether forwarding is permitted ("Permit") or denied ("Deny"). The default value is "Permit".

Rate Limiter ID	Select which rate limiter to apply on this port. The allowed values are Disabled or the values 1 through 16. The default value is "Disabled".
Port Redirect	Select which port frames are redirected on. The allowed values are Disabled or a specific port number. The default value is "Disabled". (It can't be set when action is permitted.)
Mirror	Specify the mirror operation of this port. The allowed values are: Enabled: Frames received on the port are mirrored. Disabled: Frames received on the port are not mirrored. The default value is "Disabled".
Logging	Specify the logging operation of this port. Notice that the logging message doesn't include the 4 bytes CRC. The allowed values are: Enabled: Frames received on the port are stored in the System Log. Disabled: Frames received on the port are not logged. The default value is "Disabled". Note: The logging feature only works when the packet length is less than 1518(without VLAN tags) and the System Log memory size and logging rate is limited.
Shutdown	Specify the port shut down operation of this port. The allowed values are: Enabled: If a frame is received on the port, the port will be disabled. Disabled: Port shut down is disabled. The default value is "Disabled". Note: The shutdown feature only works when the packet length is less than 1518(without VLAN tags).
State	Specify the port state of this port. The allowed values are: Enabled: To reopen ports by changing the volatile port configuration of the ACL user module. Disabled: To close ports by changing the volatile port configuration of the ACL user module. The default value is "Enabled".
Counter	Counts the number of frames that match this ACE.

```

6.5.2.2.3. Access Control List Configuration

WEB MENU Configuration>Security>Network>ACL>Access Control List

This page shows the Access Control List (ACL), which is made up of the ACEs defined on this switch. Each row describes the ACE that is defined. The maximum number of ACEs is 512 on each switch.

Click on the lowest plus sign to add a new ACE to the list. The reserved ACEs used for internal protocol, cannot be edited or deleted, the order sequence cannot be changed and the priority is highest.

Access Control List Configuration

ACE	Ingress Port	Policy / Bitmask	Frame Type	Action	Rate Limiter	Port Redirect	Mirror	Counter
+								

Access Control List Configuration

Object	Description
ACE	Indicates the ACE ID.
Ingress Port	Indicates the ingress port of the ACE. Possible values are: All: The ACE will match all ingress port. Port: The ACE will match a specific ingress port.
Policy / Bitmask	Indicates the policy number and bitmask of the ACE.
Frame Type	Indicates the frame type of the ACE. Any The ACE will match any frame type. EType The ACE will match Ethernet Type frames. Note that an Ethernet Type based ACE will not get matched by IP and ARP frames. ARP The ACE will match ARP/RARP frames. IPv4 The ACE will match all IPv4 frames. IPv4/ICMP The ACE will match IPv4 frames with ICMP protocol. IPv4/UDP The ACE will match IPv4 frames with UDP protocol. IPv4/TCP The ACE will match IPv4 frames with TCP protocol. IPv4/Other The ACE will match IPv4 frames, which are not ICMP/UDP/TCP. IPv6 The ACE will match all IPv6 standard frames.
Action	Indicates the forwarding action of the ACE. Permit Frames matching the ACE may be forwarded and learned. Deny Frames matching the ACE are dropped. Filter Frames matching the ACE are filtered.
Rate Limiter	Indicates the rate limiter number of the ACE. The allowed range is 1 to 16. When Disabled is displayed, the rate limiter operation is disabled.
Port Redirect	Indicates the port redirect operation of the ACE. Frames matching the ACE are redirected to the port number. The allowed values are Disabled or a specific port number. When Disabled is displayed, the port redirect operation is disabled.
Mirror	Specify the mirror operation of this port. Frames matching the ACE are mirrored to the destination mirror port. Enabled: Frames received on the port are mirrored. Disabled: Frames received on the port are not mirrored.

Counter	Indicates the number of times the ACE was hit by a frame.
Modification Buttons	<p>You can modify each ACE in the table using the following buttons:</p> <p> Inserts a new ACE before the current row. Clicking on it will navigate to the ACE configuration page.</p> <p> Edits the ACE row.</p> <p> Moves the ACE up the list. (Priority Increase)</p> <p> Moves the ACE down the list. (Priority decrease)</p> <p> Deletes the ACE.</p> <p> The lowest plus sign adds a new entry at the bottom of the ACE listings. (Lowest Priority)</p>

Buttons

Auto-refresh : Check this box to refresh the page automatically. Automatic refresh every 3 seconds.

: Click to refresh the page;

: Click to clear the counters.

: Click to remove all ACEs.

ACE Configuration

Configure an ACE (Access Control Entry) on this page.

An ACE consists of several parameters. These parameters vary according to the frame type that you select. First select the ingress port for the ACE, and then select the frame type. Different parameter options are displayed depending on the frame type selected.

A frame that hits this ACE matches the configuration that is defined here.

ACE Configuration

Ingress Port	All Port 1 Port 2 Port 3 Port 4
Policy Filter	Any
Frame Type	Any

Action	Permit
Rate Limiter	Disabled
Mirror	Disabled
Logging	Disabled
Shutdown	Disabled
Counter	0

VLAN Parameters

802.1Q Tagged	Any
VLAN ID Filter	Any
Tag Priority	Any

ACE Configuration

Object	Description
Ingress Port	Select the ingress port for which this ACE applies. All: The ACE applies to all port. Port n: The ACE applies to this port number.
Policy Filter	Specify the policy number filter for this ACE. Any: No policy filter is specified.

	Specific: If you want to filter a specific policy with this ACE, choose this value. Two field for entering an policy value and bitmask appears.										
Policy Value	When "Specific" is selected for the policy filter, you can enter a specific policy value. The allowed range is 0 to 255.										
Policy Bitmask	When "Specific" is selected for the policy filter, you can enter a specific policy bitmask. The allowed range is 0x0 to 0xff.										
Frame Type	<p>Select the frame type for this ACE.</p> <table border="0"> <tr> <td>Any</td> <td>Any frame can match this ACE.</td> </tr> <tr> <td>Ethernet Type</td> <td>Only Ethernet Type frames can match this ACE. The IEEE 802.3 describes the value of Length/Type Field specifications to be greater than or equal to 1536 decimal (equal to 0600 hexadecimal) and the value should not be equal to 0x800(IPv4), 0x806(ARP) or 0x86DD(IPv6).</td> </tr> <tr> <td>ARP</td> <td>Only ARP frames can match this ACE. (0x806)</td> </tr> <tr> <td>IPv4</td> <td>Only IPv4 frames can match this ACE. (0x800)</td> </tr> <tr> <td>IPv6</td> <td>Only IPv6 frames can match this ACE. (0x86DD)</td> </tr> </table>	Any	Any frame can match this ACE.	Ethernet Type	Only Ethernet Type frames can match this ACE. The IEEE 802.3 describes the value of Length/Type Field specifications to be greater than or equal to 1536 decimal (equal to 0600 hexadecimal) and the value should not be equal to 0x800(IPv4), 0x806(ARP) or 0x86DD(IPv6).	ARP	Only ARP frames can match this ACE. (0x806)	IPv4	Only IPv4 frames can match this ACE. (0x800)	IPv6	Only IPv6 frames can match this ACE. (0x86DD)
Any	Any frame can match this ACE.										
Ethernet Type	Only Ethernet Type frames can match this ACE. The IEEE 802.3 describes the value of Length/Type Field specifications to be greater than or equal to 1536 decimal (equal to 0600 hexadecimal) and the value should not be equal to 0x800(IPv4), 0x806(ARP) or 0x86DD(IPv6).										
ARP	Only ARP frames can match this ACE. (0x806)										
IPv4	Only IPv4 frames can match this ACE. (0x800)										
IPv6	Only IPv6 frames can match this ACE. (0x86DD)										
Action	<p>Specify the action to take with a frame that hits this ACE.</p> <table border="0"> <tr> <td>Permit</td> <td>The frame that hits this ACE is granted permission for the ACE operation.</td> </tr> <tr> <td>Deny</td> <td>The frame that hits this ACE is dropped.</td> </tr> <tr> <td>Filter</td> <td>Frames matching the ACE are filtered.</td> </tr> </table>	Permit	The frame that hits this ACE is granted permission for the ACE operation.	Deny	The frame that hits this ACE is dropped.	Filter	Frames matching the ACE are filtered.				
Permit	The frame that hits this ACE is granted permission for the ACE operation.										
Deny	The frame that hits this ACE is dropped.										
Filter	Frames matching the ACE are filtered.										
Rate Limiter	Specify the rate limiter in number of base units. The allowed range is 1 to 16. Disabled indicates that the rate limiter operation is disabled.										
Port Redirect	Frames that hit the ACE are redirected to the port number specified here. The rate limiter will affect these ports. The allowed range is the same as the switch port number range. Disabled indicates that the port redirect operation is disabled and the specific port number of 'Port Redirect' can't be set when action is permitted.										
Mirror	<p>Specify the mirror operation of this port. Frames matching the ACE are mirrored to the destination mirror port. The rate limiter will not affect frames on the mirror port.</p> <p>Enabled: Frames received on the port are mirrored. Disabled: Frames received on the port are not mirrored.</p>										
Logging	<p>Specify the logging operation of the ACE.</p> <p>Enabled: Frames matching the ACE are stored in the System Log. Disabled: Frames matching the ACE are not logged.</p> <p>Note: The logging feature only works when the packet length is less than 1518(without VLAN tags) and the System Log memory size and logging rate is limited.</p>										
Shutdown	<p>Specify the port shut down operation of the ACE.</p> <p>Enabled: If a frame matches the ACE, the ingress port will be disabled. Disabled: Port shut down is disabled for the ACE.</p> <p>Note: The shutdown feature only works when the packet length is less than 1518(without VLAN tags).</p>										
Counter	The counter indicates the number of times the ACE was hit by a frame.										
MAC Parameters	Configure MAC settings for ACE (Only displayed when the frame type is Ethernet Type or ARP.)										
SMAC Filter	<p>Specify the source MAC filter for this ACE.</p> <p>Any: No SMAC filter is specified. Specific: If you want to filter a specific source MAC address with this ACE</p>										
SMAC Value	When "Specific" is selected for the SMAC filter, you can enter a specific										

	source MAC address. The legal format is "xx-xx-xx-xx-xx-xx" or "xx.xx.xx.xx.xx.xx" or "xxxxxxxxxxxx" (x is a hexadecimal digit). A frame that hits this ACE matches this SMAC value
DMAC Filter	Specify the destination MAC filter for this ACE. Any No DMAC filter is specified. MC Frame must be multicast. BC Frame must be broadcast. UC Frame must be unicast. Specific To filter a specific destination MAC address with this ACE.
DMAC Value	When "Specific" is selected for the DMAC filter, you can enter a specific destination MAC address. The legal format is "xx-xx-xx-xx-xx-xx" or "xx.xx.xx.xx.xx.xx" or "xxxxxxxxxxxx" (x is a hexadecimal digit). A frame that hits this ACE matches this DMAC value.
VLAN Parameters	Configure VLAN settings for ACE
802.1Q Tagged	Specify whether frames can hit the action according to the 802.1Q tagged. Any Any value is allowed. Enabled Tagged frame only. Disabled Untagged frame only.
VLAN ID Filter	Specify the VLAN ID filter for this ACE. Any No VLAN ID filter is specified. Specific If you want to filter a specific VLAN ID with this ACE
VLAN ID	When "Specific" is selected for the VLAN ID filter, you can enter a specific VLAN ID number. The allowed range is 1 to 4095. A frame that hits this ACE matches this VLAN ID value.
Tag Priority	Specify the tag priority for this ACE. A frame that hits this ACE matches this tag priority. The allowed number range is 0 to 7 or range 0-1, 2-3, 4-5, 6-7, 0-3 and 4-7. The value Any means that no tag priority is specified.
ARP Parameters	Configure ARP settings for ACE (The ARP parameters can be configured when Frame Type "ARP" is selected.)
ARP/RARP	Specify the available ARP/RARP opcode (OP) flag for this ACE. Any No ARP/RARP OP flag is specified. ARP Frame must have ARP opcode set to ARP. RARP Frame must have RARP opcode set to RARP. Other Frame has unknown ARP/RARP Opcode flag.
Request/Reply	Specify the available Request/Reply opcode (OP) flag for this ACE. Any No Request/Reply OP flag is specified. Request Frame must have ARP Request or RARP Request OP flag set. Reply Frame must have ARP Reply or RARP Reply OP flag.
Sender IP Filter	Specify the sender IP filter for this ACE. Any No sender IP filter is specified. Host Sender IP filter is set to Host. Network Sender IP filter is set to Network.
Sender IP Address	When "Host" or "Network" is selected for the sender IP filter, you can enter a specific sender IP address in dotted decimal notation.
Sender IP Mask	When "Network" is selected for the sender IP filter, you can enter a specific sender IP mask in dotted decimal notation.
Target IP Filter	Specify the target IP filter for this specific ACE. Any No target IP filter is specified. Host Target IP filter is set to Host. Network Target IP filter is set to Network.

Target IP Address	When "Host" or "Network" is selected for the target IP filter, you can enter a specific target IP address in dotted decimal notation.
Target IP Mask	When "Network" is selected for the target IP filter, you can enter a specific target IP mask in dotted decimal notation.
ARP Sender MAC Match	Specify whether frames can hit the action according to their sender hardware address field (SHA) settings. 0 ARP frames where SHA is not equal to the SMAC address. 1 ARP frames where SHA is equal to the SMAC address. Any Any value is allowed.
RARP Target MAC Match	Specify whether frames can hit the action according to their target hardware address field (THA) settings. 0 RARP frames where THA is not equal to the target MAC address. 1 RARP frames where THA is equal to the target MAC address. Any Any value is allowed.
IP/Ethernet Length	Specify whether frames can hit the action according to their ARP/RARP hardware address length (HLN) and protocol address length (PLN) settings. 0 ARP/RARP frames where the HLN is not equal to Ethernet (0x06) or the (PLN) is not equal to IPv4 (0x04). 1 ARP/RARP frames where the HLN is equal to Ethernet (0x06) and the (PLN) is equal to IPv4 (0x04). Any Any value is allowed.
IP	Specify whether frames can hit the action according to their ARP/RARP hardware address space (HRD) settings. 0 ARP/RARP frames where the HLD is not equal to Ethernet (1). 1 ARP/RARP frames where the HLD is equal to Ethernet (1). Any Any value is allowed.
Ethernet	Specify whether frames can hit the action according to their ARP/RARP protocol address space (PRO) settings. 0 ARP/RARP frames where the PRO is not equal to IP (0x800). 1 ARP/RARP frames where the PRO is equal to IP (0x800). Any Any value is allowed.
IP Parameters	Configure IPv4 settings for ACE. The IP parameters can be configured when Frame Type "IPv4" is selected.
IP Protocol Filter	Specify the IP protocol filter for this ACE. Any No IP protocol filter is specified Specific Select Specific if you want to filter a specific IP protocol with this ACE. ICMP Select ICMP to filter IPv4 ICMP protocol frames. UDP Select UDP to filter IPv4 UDP protocol frames. TCP Select TCP to filter IPv4 TCP protocol frames.
IP Protocol Value	When "Specific" is selected for the IP protocol value, you can enter a specific value. The allowed range is 0 to 255. A frame that hits this ACE matches this IP protocol value.
IP TTL	Specify the Time-to-Live settings for this ACE. zero IPv4 frames with a Time-to-Live field greater than zero must not be able to match this entry. non-zero IPv4 frames with a Time-to-Live field greater than zero must be able to match this entry. Any Any value is allowed.
IP Fragment	Specify the fragment offset settings for this ACE. This involves the settings for the More Fragments (MF) bit and the Fragment Offset (FRAG

	<p>OFFSET) field for an IPv4 frame.</p> <p>No IPv4 frames where the MF bit is set or the FRAG OFFSET field is greater than zero must not be able to match this entry.</p> <p>Yes IPv4 frames where the MF bit is set or the FRAG OFFSET field is greater than zero must be able to match this entry.</p> <p>Any Any value is allowed.</p>
IP Option	<p>Specify the options flag setting for this ACE.</p> <p>No IPv4 frames where the options flag is set must not be able to match this entry.</p> <p>Yes IPv4 frames where the options flag is set must be able to match this entry.</p> <p>Any Any value is allowed.</p>
SIP Filter	<p>Specify the source IP filter for this ACE.</p> <p>Any No source IP filter is specified.</p> <p>Host Source IP filter is set to Host.</p> <p>Network Source IP filter is set to Network.</p>
SIP Address	<p>When "Host" or "Network" is selected for the source IP filter, you can enter a specific SIP address in dotted decimal notation.</p>
SIP Mask	<p>When "Network" is selected for the source IP filter, you can enter a specific SIP mask in dotted decimal notation.</p>
DIP Filter	<p>Specify the destination IP filter for this ACE.</p> <p>Any No destination IP filter is specified.</p> <p>Host Destination IP filter is set to Host.</p> <p>Network Destination IP filter is set to Network.</p>
DIP Address	<p>When "Host" or "Network" is selected for the destination IP filter, you can enter a specific DIP address in dotted decimal notation.</p>
DIP Mask	<p>When "Network" is selected for the destination IP filter, you can enter a specific DIP mask in dotted decimal notation.</p>
IPv6 Parameters	<p>Configure IPv6 settings for ACE. The IPv6 parameters can be configured when Frame Type "IPv6" is selected.</p>
Next Header Filter	<p>Specify the IPv6 next header filter for this ACE.</p> <p>Any No IPv6 next header filter is specified</p> <p>Specific Select Specific if you want to filter a specific IPv6 next header filter with this ACE.</p> <p>ICMP Select ICMP to filter IPv6 ICMP protocol frames.</p> <p>UDP Select UDP to filter IPv6 UDP protocol frames.</p> <p>TCP Select TCP to filter IPv6 TCP protocol frames.</p>
Next Header Value	<p>When "Specific" is selected for the IPv6 next header value, you can enter a specific value. The allowed range is 0 to 255. A frame that hits this ACE matches this IPv6 protocol value.</p>
SIP Filter	<p>Specify the source IPv6 filter for this ACE.</p> <p>Any No source IPv6 filter is specified.</p> <p>Specific Source IPv6 filter is set to Network. Specify the source IPv6 address and source IPv6 mask in the SIP Address fields that appear.</p>
SIP Address	<p>When "Specific" is selected for the source IPv6 filter, you can enter a specific SIPv6 address. The field only supported last 32 bits for IPv6 address.</p>
SIP BitMask	<p>When "Specific" is selected for the source IPv6 filter, you can enter a specific SIPv6 mask. The field only supported last 32 bits for IPv6 address. Notice the usage of bitmask, if the binary bit value is "0", it means this bit is "don't-care". The real matched pattern is [sipv6_address</p>

	& sipv6_bitmask] (last 32 bits). For example, if the SIPv6 address is 2001::3 and the SIPv6 bitmask is 0xFFFFFFF0 (bit 0 is "don't-care" bit), then SIPv6 address 2001::2 and 2001::3 are applied to this rule.
Hop Limit	Specify the hop limit settings for this ACE. <hr/> Zero IPv6 frames with a hop limit field greater than zero must not be able to match this entry. <hr/> non-zero IPv6 frames with a hop limit field greater than zero must be able to match this entry. <hr/> Any Any value is allowed.
ICMP Parameters	Configure ICMP settings for ACE.
ICMP Type Filter	Specify the ICMP filter for this ACE. <hr/> Any No ICMP filter is specified. <hr/> Specific If you want to filter a specific ICMP filter with this ACE, you can enter a specific ICMP value.
ICMP Type Value	When "Specific" is selected for the ICMP filter, you can enter a specific ICMP value. The allowed range is 0 to 255. A frame that hits this ACE matches this ICMP value.
ICMP Code Filter	Specify the ICMP code filter for this ACE. <hr/> Any No ICMP code filter is specified. <hr/> Specific If you want to filter a specific ICMP code filter with this ACE, you can enter a specific ICMP code value.
ICMP Code Value	When "Specific" is selected for the ICMP code filter, you can enter a specific ICMP code value. The allowed range is 0 to 255. A frame that hits this ACE matches this ICMP code value.
TCP/UDP Parameters	Configure TCP/UDP settings for ACE.
TCP/UDP Source Filter	Specify the TCP/UDP source filter for this ACE. <hr/> Any No TCP/UDP source filter is specified. <hr/> Specific If you want to filter a specific TCP/UDP source filter with this ACE, you can enter a specific TCP/UDP source value. <hr/> Range If you want to filter a specific TCP/UDP source range filter with this ACE, you can enter a specific TCP/UDP source range value.
TCP/UDP Source No.	When "Specific" is selected for the TCP/UDP source filter, you can enter a specific TCP/UDP source value. The allowed range is 0 to 65535. A frame that hits this ACE matches this TCP/UDP source value.
TCP/UDP Source Range	When "Range" is selected for the TCP/UDP source filter, you can enter a specific TCP/UDP source range value. The allowed range is 0 to 65535. A frame that hits this ACE matches this TCP/UDP source value.
TCP/UDP Destination Filter	Specify the TCP/UDP destination filter for this ACE. <hr/> Any No TCP/UDP destination filter is specified <hr/> Specific If you want to filter a specific TCP/UDP destination filter with this ACE, you can enter a specific TCP/UDP destination value. <hr/> Range If you want to filter a specific range TCP/UDP destination filter with this ACE, you can enter a specific TCP/UDP destination range value.
TCP/UDP Destination Number	When "Specific" is selected for the TCP/UDP destination filter, you can enter a specific TCP/UDP destination value. The allowed range is 0 to 65535. A frame that hits this ACE matches this TCP/UDP destination value.
TCP/UDP Destination	When "Range" is selected for the TCP/UDP destination filter, you can enter a specific TCP/UDP destination range value. The allowed range is

Range	0 to 65535. A frame that hits this ACE matches this TCP/UDP destination value.
TCP FIN	Specify the TCP "No more data from sender" (FIN) value for this ACE. 0 TCP frames where the FIN field is set must not be able to match this entry. <hr/> 1 TCP frames where the FIN field is set must be able to match this entry. <hr/> Any Any value is allowed.
TCP SYN	Specify the TCP "Synchronize sequence numbers" (SYN) value for this ACE. 0 TCP frames where the SYN field is set must not be able to match this entry. <hr/> 1 TCP frames where the SYN field is set must be able to match this entry. <hr/> Any Any value is allowed.
TCP RST	Specify the TCP "Reset the connection" (RST) value for this ACE. 0 TCP frames where the RST field is set must not be able to match this entry. <hr/> 1 TCP frames where the RST field is set must be able to match this entry. <hr/> Any Any value is allowed.
TCP PSH	Specify the TCP "Push Function" (PSH) value for this ACE. 0 TCP frames where the PSH field is set must not be able to match this entry. <hr/> 1 TCP frames where the PSH field is set must be able to match this entry. <hr/> Any Any value is allowed.
TCP ACK	Specify the TCP "Acknowledgment field significant" (ACK) value for this ACE. 0 TCP frames where the ACK field is set must not be able to match this entry. <hr/> 1 TCP frames where the ACK field is set must be able to match this entry. <hr/> Any Any value is allowed.
TCP URG	Specify the TCP "Urgent Pointer field significant" (URG) value for this ACE. 0 TCP frames where the URG field is set must not be able to match this entry. <hr/> 1 TCP frames where the URG field is set must be able to match this entry. <hr/> Any Any value is allowed.
Ethernet Type Parameters	Configure Ethernet Type settings for ACE. The Ethernet Type parameters can be configured when Frame Type "Ethernet Type" is selected.
EtherType Filter	Specify the Ethernet type filter for this ACE. Any No EtherType filter is specified <hr/> Specific If you want to filter a specific EtherType filter with this ACE, you can enter a specific EtherType value.
Ethernet Type Value	When "Specific" is selected for the EtherType filter, you can enter a specific EtherType value. The allowed range is 0x600 to 0xFFFF but excluding 0x800(IPv4), 0x806(ARP) and 0x86DD(IPv6). A frame that hits this ACE matches this EtherType value.

IP Source Guard Configuration

Object	Description
Mode of IP Source Guard Configuration	Enable the Global IP Source Guard or disable the Global IP Source Guard. All configured ACEs will be lost when the mode is enabled.

Port Mode Configuration

Object	Description
Port Mode Configuration	Specify IP Source Guard is enabled on which ports. Only when both Global Mode and Port Mode on a given port are enabled, IP Source Guard is enabled on this given port.
Max Dynamic Clients	Specify the maximum number of dynamic clients that can be learned on given port. This value can be 0, 1, 2 or unlimited. If the port mode is enabled and the value of max dynamic client is equal to 0, it means only allow the IP packets forwarding that are matched in static entries on the specific port.

Buttons

: Click to apply changes.

: Click to apply and save changes.

: Click to undo any changes made locally and revert to previously saved values.

: Click to translate all dynamic entries to static entries.

: Updates the table starting from the first entry in the Dynamic ARP Inspection Table.

: Updates the table, starting with the entry after the last entry currently displayed.

6.5.3. AAA Configuration

AAA allows for common server configurations including Timeout, Retransmit, Secret Key, NAS IP Address, NAS IPv6 Address, NAS Identifier, and Dead Time parameters. The software supports configuration of RADIUS and TACACS+ servers.

RADIUS servers use the inherently untrusted UDP protocol by design. To handle lost frames, the timeout interval is divided into three equal sub-intervals. If no response is received within a sub-interval, the request is retransmitted. This algorithm allows the RADIUS server to be queried up to three times before being considered dead.

Dead Time, which can be set as a number between 0 to 3600 seconds, is the duration during which the switch does not send new requests to a server that did not respond to the previous request. This prevents the switch from continuously attempting to connect to a server it has already determined to be non-responsive. Dead Time can be set to a value greater than 0, but this feature is only applicable when multiple servers are configured.

Authentication is the process of verifying access to the switch's management interface for users. The RADIUS authentication server is used for granting access rights to both the NAS module and the switch's management interface. The RADIUS accounting server is used only by the NAS module.

TACACS+ is an access control network protocol for routers, network access servers, and other network computing devices. TACACS+ authentication, authorization, and accounting management are supported by the software. The CLI interface is only supported in the initial version for configuring TACACS+ authentication and accounting mechanisms.

6.5.3.1. Radius

WEB MENU Configuration>Security>AAA>RADIUS

This page allows you to configure the RADIUS servers

RADIUS Server Configuration

Global Configuration

Timeout	5	seconds
Retransmit	3	times
Deadtime	0	minutes
Key	<input type="text"/>	
NAS-IP-Address	<input type="text"/>	
NAS-IPv6-Address	<input type="text"/>	
NAS-Identifier	<input type="text"/>	

Server Configuration

Delete	Hostname	Auth Port	Acct Port	Timeout	Retransmit	Key
--------	----------	-----------	-----------	---------	------------	-----

RADIUS Server Configuration

Global Configuration

Object	Description
Timeout	Timeout is the number of seconds, in the range 1 to 1000, to wait for a reply from a RADIUS server before retransmitting the request.
Retransmit	Retransmit is the number of times, in the range 1 to 1000, a RADIUS request is retransmitted to a server that is not responding. If the server has not responded after the last retransmit it is considered to be dead.
Deadtime	Deadtime, which can be set to a number between 0 to 1440 minutes, is the period during which the switch will not send new requests to a server that has failed to respond to a previous request. This will stop the switch from continually trying to contact a server that it has already determined as dead. Setting the Deadtime to a value greater than 0 (zero) will enable this feature, but only if more than one server has been configured.
Key	The secret key - up to 63 characters long - shared between the RADIUS server and the switch.
NAS-IP-Address (Attribute 4)	The IPv4 address to be used as attribute 4 in RADIUS Access-Request packets. If this field is left blank, the IP address of the outgoing interface is used.
NAS-IPv6-Address (Attribute 95)	The IPv6 address to be used as attribute 95 in RADIUS Access-Request packets. If this field is left blank, the IP address of the outgoing interface is used.
NAS-Identifier (Attribute 32)	The identifier - up to 253 characters long - to be used as attribute 32 in RADIUS Access-Request packets. If this field is left blank, the NAS-Identifier is not included in the packet.

Server Configuration

Object	Description
Delete	To delete a RADIUS server entry, check this box. The entry will be deleted during the next Save.
Hostname	The IP address or hostname of the RADIUS server.
Auth Port	The UDP port to use on the RADIUS server for authentication. Set to 0 to disable authentication.
Acct Port	The UDP port to use on the RADIUS server for accounting. Set to 0 to disable accounting.
Timeout	This optional setting overrides the global timeout value. Leaving it blank will use the global timeout value.
Retransmit	This optional setting overrides the global retransmit value. Leaving it blank will use the global retransmit value.
Key	This optional setting overrides the global key. Leaving it blank will use the global key.

Buttons

Add New Server: Click **Add New Server** to add a new RADIUS server. An empty row is added to the table, and the RADIUS server can be configured as needed. Up to 5 servers are supported.

Delete: The **Delete** button can be used to undo the addition of the new server.

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

SSH	Receive:	89	Allow:	89	Discard:	0

6.5.5. Network Monitor

6.5.5.1. Port Security

6.5.5.1.1. Switch

WEB MENU Monitor>Security>Network>Port Security>Switch

This page shows the Port Security status. Port Security is a module with no direct configuration. Configuration comes indirectly from other modules - the user modules. When a user module has enabled port security on a port, the port is set-up for software-based learning. In this mode, frames from unknown MAC addresses are passed on to the port security module, which in turn asks all user modules whether to allow this new MAC address to forward or block it. For a MAC address to be set in the forwarding state, all enabled user modules must unanimously agree on allowing the MAC address to forward. If only one chooses to block it, it will be blocked until that user module decides otherwise.

The status page is divided into two sections - one with a legend of user modules and one with the actual port status.

Port Security Switch Status

User Module Legend

User Module Name	Abbr
Limit Control	L
Voice VLAN	V

Port Status

Port	Users	State	MAC Count	
			Current	Limit
1	--	Disabled	-	-
2	--	Disabled	-	-
3	--	Disabled	-	-
4	--	Disabled	-	-
5	--	Disabled	-	-
6	--	Disabled	-	-
7	--	Disabled	-	-
8	--	Disabled	-	-

Port Security Switch Status

User Module Legend

Object	Description
User Module Legend	The legend shows all user modules that may request Port Security services.
User Module Name	The full name of a module that may request Port Security services.
Abbr	A one-letter abbreviation of the user module. This is used in the Users column in the port status table.

User Module Legend

Object	Description
Port Status	The table has one row for each port on the switch and a number of columns
Port	The port number for which the status applies. Click the port number to see the status for this particular port .

Users	Each of the user modules has a column that shows whether that module has enabled Port Security or not. A '-' means that the corresponding user module is not enabled, whereas a letter indicates that the user module abbreviated by that letter (see Abbr) has enabled port security.
State	Shows the current state of the port. It can take one of four values: Disabled: No user modules are currently using the Port Security service. Ready: The Port Security service is in use by at least one user module, and is awaiting frames from unknown MAC addresses to arrive. Limit Reached: The Port Security service is enabled by at least the Limit Control user module, and that module has indicated that the limit is reached and no more MAC addresses should be taken in. Shutdown: The Port Security service is enabled by at least the Limit Control user module, and that module has indicated that the limit is exceeded. No MAC addresses can be learned on the port until it is administratively re-opened on the Limit Control configuration Web-page.
MAC Count (Current, Limit)	The two columns indicate the number of currently learned MAC addresses (forwarding as well as blocked) and the maximum number of MAC addresses that can be learned on the port, respectively. If no user modules are enabled on the port, the Current column will show a dash (-). If the Limit Control user module is not enabled on the port, the Limit column will show a dash (-).

6.5.5.1.2. Port

WEB MENU Monitor>Security>Network>Port Security>Port

This page shows the MAC addresses secured by the Port Security module. Port Security is a module with no direct configuration. Configuration comes indirectly from other modules - the user modules. When a user module has enabled port security on a port, the port is set-up for software-based learning. In this mode, frames from unknown MAC addresses are passed on to the port security module, which in turn asks all user modules whether to allow this new MAC address to forward or block it. For a MAC address to be set in the forwarding state, all enabled user modules must unanimously agree on allowing the MAC address to forward. If only one chooses to block it, it will be blocked until that user module decides otherwise.

Port Security Port Status Port 1

MAC Address	VLAN ID	State	Time of Addition	Age/Hold
<i>No MAC addresses attached</i>				

Port Security Port Status Port n

Object	Description
MAC Address & VLAN ID	The MAC address and VLAN ID that is seen on this port. If no MAC addresses are learned, a single row stating "No MAC addresses attached" is displayed.
State	Indicates whether the corresponding MAC address is blocked or forwarding. In the blocked state, it will not be allowed to transmit or receive traffic.
Time of Addition	Shows the date and time when this MAC address was first seen on the port.
Age/Hold	If at least one user module has decided to block this MAC address, it will stay in the blocked state until the hold time (measured in seconds) expires. If all user modules have decided to allow this MAC address to forward, and aging is enabled, the Port Security module will periodically check that this MAC address still forwards traffic. If the age period (measured in seconds) expires and no frames have been seen, the MAC address will be removed from the MAC table. Otherwise, a new age period will begin. If aging is disabled or a user module has decided to hold the MAC address indefinitely, a dash (-) will be shown.

6.5.5.2. ACL Status

WEB MENU Monitor>Security>Network>ACL Status

This page shows the ACL status by different ACL users. Each row describes the ACE that is defined. It is a conflict if a specific ACE is not applied to the hardware due to hardware limitations. The maximum number of ACEs is 512 on each switch.

ACL Status

User	ACE	Frame Type	Action	Rate Limiter	Mirror	CPU	Counter	Conflict
No entries								

ACL Status

Object	Description
User	Indicates the ACL user.
ACE	Indicates the ACE ID on local switch.
Frame Type	Indicates the frame type of the ACE. Any The ACE will match any frame type. EType The ACE will match Ethernet Type frames. Note that an Ethernet Type based ACE will not get matched by IP and ARP frames. ARP The ACE will match ARP/RARP frames. IPv4 The ACE will match all IPv4 frames. IPv4/ICMP The ACE will match IPv4 frames with ICMP protocol. IPv4/UDP The ACE will match IPv4 frames with UDP protocol. IPv4/TCP The ACE will match IPv4 frames with TCP protocol. IPv4/Other The ACE will match IPv4 frames, which are not ICMP/UDP/TCP. IPv6 The ACE will match all IPv6 standard frames.
Action	Indicates the forwarding action of the ACE. Permit Frames matching the ACE may be forwarded and learned. Deny Frames matching the ACE are dropped. Filter Frames matching the ACE are filtered.
Rate Limiter	Indicates the rate limiter number of the ACE. The allowed range is 1 to 16. When Disabled is displayed, the rate limiter operation is disabled.
CPU	Forward packet that matched the specific ACE to CPU.
Counter	The counter indicates the number of times the ACE was hit by a frame.
Conflict	Indicates the hardware status of the specific ACE. The specific ACE is not applied to the hardware due to hardware limitations.

6.5.6.2. RADIUS Details

WEB MENU Monitor>Security>AAA>RADIUS Details

This page provides detailed statistics for a particular RADIUS server.

RADIUS Authentication Statistics for Server #1

Receive Packets		Transmit Packets	
Access Accepts	0	Access Requests	0
Access Rejects	0	Access Retransmissions	0
Access Challenges	0	Pending Requests	0
Malformed Access Responses	0	Timeouts	0
Bad Authenticators	0		
Unknown Types	0		
Packets Dropped	0		
Other Info			
IP Address			
State		Disabled	
Round-Trip Time		0 ms	

RADIUS Authentication Statistics for Server #n

Object	Description
RADIUS Authentication Statistics	The statistics map closely to those specified in RFC4668 - RADIUS Authentication Client MIB. Use the server select box to switch between the backend servers to show details for.
Packet Counters	<p>RADIUS authentication server packet counter. There are seven receive and four transmit counters.</p> <p>Access Accepts The number of RADIUS Access-Accept packets (valid or invalid) received from the server.</p> <p>Access Rejects The number of RADIUS Access-Reject packets (valid or invalid) received from the server.</p> <p>Access Challenges The number of RADIUS Access-Challenge packets (valid or invalid) received from the server.</p> <p>Malformed Access Responses The number of malformed RADIUS Access-Response packets received from the server. Malformed packets include packets with an invalid length. Bad authenticators or Message Authenticator attributes or unknown types are not included as malformed access responses.</p> <p>Bad Authenticators The number of RADIUS Access-Response packets containing invalid authenticators or Message Authenticator attributes received from the server.</p> <p>Unknown Types The number of RADIUS packets that were received with unknown types from the server on the authentication port and dropped.</p> <p>Packets Dropped The number of RADIUS packets that were received from the server on the authentication port and dropped for some other reason.</p> <p>Access Requests The number of RADIUS Access-Request packets sent to the server. This does not include retransmissions.</p> <p>Access Retransmissions The number of RADIUS Access-Request packets retransmitted to the RADIUS authentication server.</p> <p>Pending Requests The number of RADIUS Access-Request packets destined for the server that have not yet timed out or received a response. This variable is incremented when an Access-Request is sent and decremented due to receipt of an Access-Accept, Access-Reject, Access-Challenge, timeout, or retransmission.</p> <p>Timeouts The number of authentication timeouts to the server. After a timeout, the client may retry to the same server, send to a different server, or give up. A retry to the same server is counted as a retransmit as well as a timeout. A send to a different server is counted as a Request as well as a timeout.</p>

Other Info	This section contains information about the state of the server and the latest round-trip time.
	IP Address IP address and UDP port for the authentication server in question.
	State The number of RADIUS Access-Reject packets (valid or invalid) received from the server.
	Round-Trip Time The number of RADIUS Access-Challenge packets (valid or invalid) received from the server.

Buttons

Auto-refresh : Check this box to refresh the page automatically. Automatic refresh every 3 seconds.

: Click to refresh the page immediately.

: Clears the counters for the selected server. The "Pending Requests" counter will not be cleared by this operation.

6.6. SPANNING TREE

6.6.1. Spanning Tree Configuration

6.6.1.1. Bridge Setting

WEB MENU Configuration>Spanning Tree>Bridge Setting

This page allows you to configure STP system settings.

The settings are used by all STP Bridge instances in the Switch .

STP Bridge Configuration

Basic Settings	
Protocol Version	MSTP <input type="button" value="v"/>
Bridge Priority	32768 <input type="button" value="v"/>
Hello Time	2
Forward Delay	15
Max Age	20
Maximum Hop Count	20
Transmit Hold Count	6

Advanced Settings	
Edge Port BPDU Filtering	<input type="checkbox"/>
Edge Port BPDU Guard	<input type="checkbox"/>
Port Error Recovery	<input type="checkbox"/>
Port Error Recovery Timeout	<input type="text"/>

STP Bridge Configuration

Basic Settings

Object	Description
Protocol Version	The MSTP / RSTP / STP protocol version setting. Valid values are STP, RSTP and MSTP.
Bridge Priority	Controls the bridge priority. Lower numeric values have better priority. The bridge priority plus the MSTI instance number, concatenated with the 6-byte MAC address of the switch forms a Bridge Identifier. For MSTP operation, this is the priority of the CIST. Otherwise, this is the priority of the STP/RSTP bridge.
Hello Time	The interval between sending STP BPDU's. Valid values are in the range 1 to 10 seconds, default is 2 seconds. Note: Changing this parameter from the default value is not recommended, and may have adverse effects on your network.
Forward Delay	The delay used by STP Bridges to transit Root and Designated Ports to Forwarding (used in STP compatible mode). Valid values are in the range 4 to 30 seconds.
Max Age	The maximum age of the information transmitted by the Bridge when it is the Root Bridge. Valid values are in the range 6 to 40 seconds, and Max Age must be $\leq (FwdDelay-1)*2$.
Maximum Hop Count	This defines the initial value of remaining Hops for MSTI information generated at the boundary of an MSTI region. It defines how many bridges a root bridge can distribute its BPDU information to. Valid values are in the range 6 to 40 hops.
Transmit Hold Count	The number of BPDU's a bridge port can send per second. When exceeded, transmission of the next BPDU will be delayed. Valid values are in the range 1 to 10 BPDU's per second.

Advanced Settings

Object	Description
Edge Port BPDU	Control whether a port explicitly configured as Edge will transmit and receive BPDUs.

Filtering	
Edge Port BPDU Guard	Control whether a port explicitly configured as Edge will disable itself upon reception of a BPDU. The port will enter the error-disabled state, and will be removed from the active topology.
Port Error Recovery	Control whether a port in the error-disabled state automatically will be enabled after a certain time. If recovery is not enabled, ports have to be disabled and re-enabled for normal STP operation. The condition is also cleared by a system reboot.
Port Error Recovery Timeout	The time to pass before a port in the error-disabled state can be enabled. Valid values are between 30 and 86400 seconds (24 hours).

Buttons

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

6.6.1.2. MSTI Mapping

WEB MENU Configuration>Spanning Tree>MSTI Mapping

This page allows the user to inspect the current STP MSTI bridge instance priority configurations, and possibly change them as well.

MSTI Configuration

Add VLANs separated by spaces or comma.

Unmapped VLANs are mapped to the CIST. (The default bridge instance).

Configuration Identification	
Configuration Name	00-21-6d-00-00-00
Configuration Revision	0

MSTI Mapping	
MSTI	VLANs Mapped
MSTI1	
MSTI2	
MSTI3	
MSTI4	
MSTI5	
MSTI6	
MSTI7	

MSTI Configuration

Configuration Identification

Object	Description
Configuration Identification	Configuration Identification refers to a value used to identify changes in the MSTP (Multiple Spanning Tree Protocol) configuration.
Configuration Name	The name identifying the VLAN to MSTI mapping. Bridges must share the name and revision (see below), as well as the VLAN-to-MSTI mapping configuration in order to share spanning trees for MSTI's (Intra-region). The name is at most 32 characters.
Configuration Revision	The revision of the MSTI configuration named above. This must be an integer between 0 and 65535.

MSTI Mapping

Object	Description
MSTI Mapping	MSTI Mapping refers to the process of defining the mapping between VLANs (Virtual LANs) and MSTIs (Multiple Spanning Tree Instances) in the context of MSTP (Multiple Spanning Tree Protocol).
MSTI	The bridge instance. The CIST is not available for explicit mapping, as it will receive the VLANs not explicitly mapped.
VLANs Mapped	The list of VLANs mapped to the MSTI. The VLANs can be given as a single (xx, xx being between 1 and 4094) VLAN, or a range (xx-yy), each of which must be separated with comma and/or space. A VLAN can only be mapped to one MSTI. An unused MSTI should just be left empty. (I.e. not having any VLANs mapped to it.)

Buttons

STP CIST Port Configuration

CIST Aggregated Port Configuration

CIST Normal Port Configuration

Object	Description
Port	The switch port number of the logical STP port.
STP Enabled	Controls whether STP is enabled on this switch port.
Path Cost	Controls the path cost incurred by the port. The Auto setting will set the path cost as appropriate by the physical link speed, using the 802.1D recommended values. Using the Specific setting, a user-defined value can be entered. The path cost is used when establishing the active topology of the network. Lower path cost ports are chosen as forwarding ports in favor of higher path cost ports. Valid values are in the range 1 to 200000000.
Priority	Controls the port priority. This can be used to control priority of ports having identical port cost. (See above).
operEdge (state flag)	Operational flag describing whether the port is connecting directly to edge devices. (No Bridges attached). Transition to the forwarding state is faster for edge ports (having operEdge true) than for other ports. The value of this flag is based on AdminEdge and AutoEdge fields. This flag is displayed as Edge in Monitor->Spanning Tree -> STP Detailed Bridge Status.
AdminEdge	Controls whether the operEdge flag should start as set or cleared. (The initial operEdge state when a port is initialized)
AutoEdge	Controls whether the bridge should enable automatic edge detection on the bridge port. This allows operEdge to be derived from whether BPDU's are received on the port or not.
Restricted Role	If enabled, causes the port not to be selected as Root Port for the CIST or any MSTI, even if it has the best spanning tree priority vector. Such a port will be selected as an Alternate Port after the Root Port has been selected. If set, it can cause lack of spanning tree connectivity. It can be set by a network administrator to prevent bridges external to a core region of the network influence the spanning tree active topology, possibly because those bridges are not under the full control of the administrator. This feature is also known as Root Guard.

Restricted TCN	If enabled, causes the port not to propagate received topology change notifications and topology changes to other ports. If set it can cause temporary loss of connectivity after changes in a spanning tree's active topology as a result of persistently incorrect learned station location information. It is set by a network administrator to prevent bridges external to a core region of the network, causing address flushing in that region, possibly because those bridges are not under the full control of the administrator or the physical link state of the attached LANs transits frequently.
BPDU Guard	If enabled, causes the port to disable itself upon receiving valid BPDU's. Contrary to the similar bridge setting, the port Edge status does not effect this setting. A port entering error-disabled state due to this setting is subject to the bridge Port Error Recovery setting as well.
Point-to-Point	Controls whether the port connects to a point-to-point LAN rather than to a shared medium. This can be automatically determined, or forced either true or false. Transition to the forwarding state is faster for point-to-point LANs than for shared media.

```

6.6.1.5. MSTI Ports

WEB MENU Configuration>Spanning Tree>MSTI Ports

This page allows the user to inspect the current STP MSTI port configurations, and possibly change them as well. An MSTI port is a virtual port, which is instantiated separately for each active CIST (physical) port for each MSTI instance configured on and applicable to the port. The MSTI instance must be selected before displaying actual MSTI port configuration options.

This page contains MSTI port settings for physical and aggregated ports.

6.6.2. Spanning Tree Monitor

6.6.2.1. Bridge Status

WEB MENU Monitor>Spanning Tree>Bridge Status

This page provides a status overview of all STP bridge instances.

STP Bridges

MSTI	Bridge ID	Root			Topology Flag	Topology Change Last
		ID	Port	Cost		
CIST	32768.00-21-6D-00-00-00	32768.00-21-6D-00-00-00	-	0	Steady	-

The displayed table contains a row for each STP bridge instance, where the column displays the following information

STP Bridges

Object	Description
MSTI	The Bridge Instance. This is also a link to the STP Detailed Bridge Status.
Bridge ID	The Bridge ID of this Bridge instance.
Root ID	The Bridge ID of the currently elected root bridge.
Root Port	The switch port currently assigned the <i>root</i> port role.
Root Cost	Root Path Cost. For the Root Bridge it is zero. For all other Bridges, it is the sum of the Port Path Costs on the least cost path to the Root Bridge.
Topology Flag	The current state of the Topology Change Flag of this Bridge instance.
Topology Change Last	The time since last Topology Change occurred.

Buttons

STP Detailed Bridge Status

This page provides detailed information on a single STP bridge instance, along with port state for all active ports associated.

STP Detailed Bridge Status

STP Bridge Status	
Bridge Instance	CIST
Bridge ID	32768.00-21-6D-00-00-00
Root ID	32768.00-21-6D-00-00-00
Root Cost	0
Root Port	-
Regional Root	32768.00-21-6D-00-00-00
Internal Root Cost	0
Topology Flag	Steady
Topology Change Count	0
Topology Change Last	-

CIST Ports & Aggregations State

Port	Port ID	Role	State	Path Cost	Edge	Point-to-Point	Uptime
No ports or aggregations active							

STP Detailed Bridge Status

Object	Description
STP Bridge Status	This entry shows the state of the STP bridge instance.
Bridge Instance	The Bridge instance - CIST, MST1, ...
Bridge ID	The Bridge ID of this Bridge instance.
Root ID	The Bridge ID of the currently elected root bridge.
Root Port	The switch port currently assigned the root port role.
Root Cost	Root Path Cost. For the Root Bridge this is zero. For all other Bridges, it is the sum of the Port Path Costs on the least cost path to the Root Bridge.
Regional Root	The Bridge ID of the currently elected regional root bridge, inside the MSTP region of this bridge. (For the CIST instance only).
Internal Root Cost	The Regional Root Path Cost. For the Regional Root Bridge this is zero. For all other CIST instances in the same MSTP region, it is the sum of the Internal Port Path Costs on the least cost path to the Internal Root Bridge. (For the CIST instance only).
Topology Flag	The current state of the Topology Change Flag of this Bridge instance.
Topology Change Count	The number of times where the topology change flag has been set (during a one-second interval).
Topology Change Last	The time passed since the Topology Flag was last set.

CIST Ports & Aggregations State

Object	Description
CIST Ports & Aggregations State	This entry shows the state of the CIST (Common and Internal Spanning Tree) ports and aggregations.
Port	The switch port number of the logical STP port.
Port ID	The port id as used by the STP protocol. This is the priority part and the logical port index of the bridge port.
Role	The current STP port role. The port role can be one of the following values: Alternate Port, Backup Port, Root Port, Designated Port.
State	The current STP port state. The port state can be one of the following values: Discarding, Learning, Forwarding.
Path Cost	The current STP port path cost. This will either be a value computed from the Auto setting, or any explicitly configured value.
Edge	The current STP port (operational) Edge Flag. An Edge Port is a switch port to which no Bridges are attached. The flag may be automatically computed or explicitly configured. Each Edge Port transmits directly to the Forwarding Port State, since there is no possibility of it participating in a loop.
Point-to-Point	The current STP port point-to-point flag. A point-to-point port connects to a non-shared LAN media. The flag may be automatically computed or explicitly configured. The point-to-point properties of a port affect how fast it can transit to STP state.
Uptime	The time since the bridge port was last initialized.

6.6.2.3. Port Statistics

WEB MENU Monitor>Spanning Tree>Port Statistics

This page displays the STP port statistics counters of bridge ports in the switch.

STP Statistics

Port	Transmitted				Received				Discarded	
	MSTP	RSTP	STP	TCN	MSTP	RSTP	STP	TCN	Unknown	Illegal
No ports enabled										

STP Statistics

Object	Description
Port	The switch port number of the logical STP port.
MSTP	The number of MSTP BPDU's received/transmitted on the port.
RSTP	The number of RSTP BPDU's received/transmitted on the port.
STP	The number of legacy STP Configuration BPDU's received/transmitted on the port.
TCN	The number of (legacy) Topology Change Notification BPDU's received/transmitted on the port.
Discarded Unknown	The number of unknown Spanning Tree BPDU's received (and discarded) on the port.
Discarded Illegal	The number of illegal Spanning Tree BPDU's received (and discarded) on the port.

LLDP Configuration

LLDP Parameters

Object	Description
Tx Interval	The switch periodically transmits LLDP frames to its neighbors for having the network discovery information up-to-date. The interval between each LLDP frame is determined by the Tx Interval value. Valid values are restricted to 5 - 32768 seconds.
Tx Hold	Each LLDP frame contains information about how long time the information in the LLDP frame shall be considered valid. The LLDP information valid period is set to Tx Hold multiplied by Tx Interval seconds. Valid values are restricted to 2 - 10 times.
Tx Delay	If some configuration is changed (e.g. the IP address) a new LLDP frame is transmitted, but the time between the LLDP frames will always be at least the value of Tx Delay seconds. Tx Delay cannot be larger than 1/4 of the Tx Interval value. Valid values are restricted to 1 - 8192 seconds.
Tx Reinit	When a interface is disabled, LLDP is disabled or the switch is rebooted, a LLDP shutdown frame is transmitted to the neighboring units, signaling that the LLDP information isn't valid anymore. Tx Reinit controls the number of seconds between the shutdown frame and a new LLDP initialization. Valid values are restricted to 1 - 10 seconds.

LLDP Interface Configuration

Object	Description
Interface	The switch interface name of the logical LLDP interface.
Mode	Select LLDP mode. Rx only The switch will not send out LLDP information, but LLDP information from neighbor units is analyzed.

	<table border="1"> <tr> <td>Tx only</td> <td>The switch will drop LLDP information received from neighbors, but will send out LLDP information.</td> </tr> <tr> <td>Disabled</td> <td>The switch will not send out LLDP information, and will drop LLDP information received from neighbors.</td> </tr> <tr> <td>Enabled</td> <td>The switch will send out LLDP information, and will analyze LLDP information received from neighbors.</td> </tr> </table>	Tx only	The switch will drop LLDP information received from neighbors, but will send out LLDP information.	Disabled	The switch will not send out LLDP information, and will drop LLDP information received from neighbors.	Enabled	The switch will send out LLDP information, and will analyze LLDP information received from neighbors.
Tx only	The switch will drop LLDP information received from neighbors, but will send out LLDP information.						
Disabled	The switch will not send out LLDP information, and will drop LLDP information received from neighbors.						
Enabled	The switch will send out LLDP information, and will analyze LLDP information received from neighbors.						
CDP Aware	<p>Select CDP awareness.</p> <p>The CDP operation is restricted to decoding incoming CDP frames (The switch doesn't transmit CDP frames). CDP frames are only decoded if LLDP on the interface is enabled.</p> <p>Only CDP TLVs that can be mapped to a corresponding field in the LLDP neighbors' table are decoded. All other TLVs are discarded (Unrecognized CDP TLVs and discarded CDP frames are not shown in the LLDP statistics.). CDP TLVs are mapped onto LLDP neighbors' table as shown below.</p> <p>CDP TLV "Device ID" is mapped to the LLDP "Chassis ID" field.</p> <p>CDP TLV "Address" is mapped to the LLDP "Management Address" field. The CDP address TLV can contain multiple addresses, but only the first address is shown in the LLDP neighbor's table.</p> <p>CDP TLV "Port ID" is mapped to the LLDP "Port ID" field.</p> <p>CDP TLV "Version and Platform" is mapped to the LLDP "System Description" field.</p> <p>Both the CDP and LLDP support "system capabilities", but the CDP capabilities cover capabilities that are not part of the LLDP. These capabilities are shown as "others" in the LLDP neighbors' table.</p> <p>If all interfaces have CDP awareness disabled the switch forwards CDP frames received from neighbor devices. If at least one interface has CDP awareness enabled all CDP frames are terminated by the switch.</p> <p>Note: When CDP awareness on an interface is disabled the CDP information isn't removed immediately, but gets removed when the hold time is exceeded.</p>						
Port Descr	When checked the "port description" is included in LLDP information transmitted.						
Sys Name	When checked the "system name" is included in LLDP information transmitted.						
Sys Descr	When checked the "system description" is included in LLDP information transmitted.						
Sys Capa	When checked the "system capability" is included in LLDP information transmitted.						
Mgmt Addr	When checked the "management address" is included in LLDP information transmitted.

LLDP-MED Configuration

Fast Start Repeat Count

Object	Description
Fast start repeat count	<p>Rapid startup and Emergency Call Service Location Identification Discovery of endpoints is a critically important aspect of VoIP systems in general. In addition, it is best to advertise only those pieces of information which are specifically relevant to particular endpoint types (for example only advertise the voice network policy to permitted voice-capable devices), both in order to conserve the limited LLDP space and to reduce security and system integrity issues that can come with inappropriate knowledge of the network policy.</p> <p>With this in mind LLDP-MED defines an LLDP-MED Fast Start interaction between the protocol and the application layers on top of the protocol, in order to achieve these related properties. Initially, a Network Connectivity Device will only transmit LLDP TLVs</p>

	<p>in an LLDPDU. Only after an LLDP-MED Endpoint Device is detected, will an LLDP-MED capable Network Connectivity Device start to advertise LLDP-MED TLVs in outgoing LLDPDUs on the associated interface. The LLDP-MED application will temporarily speed up the transmission of the LLDPDU to start within a second, when a new LLDP-MED neighbor has been detected in order share LLDP-MED information as fast as possible to new neighbors.</p> <p>Because there is a risk of an LLDP frame being lost during transmission between neighbors, it is recommended to repeat the fast start transmission multiple times to increase the possibility of the neighbors receiving the LLDP frame. With Fast start repeat count it is possible to specify the number of times the fast start transmission would be repeated. The recommended value is 4 times, given that 4 LLDP frames with a 1 second interval will be transmitted, when an LLDP frame with new information is received.</p> <p>It should be noted that LLDP-MED and the LLDP-MED Fast Start mechanism is only intended to run on links between LLDP-MED Network Connectivity Devices and Endpoint Devices, and as such does not apply to links between LAN infrastructure elements, including Network Connectivity Devices, or other types of links.</p>
--	---

Transmit TLVs

Object	Description
Transmit TLVs	It is possible to select which LLDP-MED information that shall be transmitted to the neighbors. When the checkbox is checked the information is included in the frame transmitted to the neighbor.
Interface	The interface name to which the configuration applies.
Capabilities	When checked the switch's capabilities is included in LLDP-MED information transmitted.
Policies	When checked the configured policies for the interface is included in LLDP-MED information transmitted.
Location	When checked the configured location information for the switch is included in LLDP-MED information transmitted.
PoE	When checked the configured PoE (Power Over Ethernet) information for the interface is included in LLDP-MED information transmitted.

Coordinates Location

Object	Description
Coordinates Location	This section is dedicated to configuring the coordinates for a switch.
Latitude	Latitude SHOULD be normalized to within 0-90 degrees with a maximum of 4 digits. It is possible to specify the direction to either North of the equator or South of the equator.
Longitude	Longitude SHOULD be normalized to within 0-180 degrees with a maximum of 4 digits. It is possible to specify the direction to either East of the prime meridian or West of the prime meridian.
Altitude	Altitude SHOULD be normalized to within -2097151.9 to 2097151.9 with a maximum of 1 digit. It is possible to select between two altitude types (floors or meters). Meters: Representing meters of Altitude defined by the vertical datum specified. Floors: Representing altitude in a form more relevant in buildings which have different floor-to-floor dimensions. An altitude = 0.0 is meaningful even outside a building, and

	represents ground level at the given latitude and longitude. Inside a building, 0.0 represents the floor level associated with ground level at the main entrance.
Map Datum	<p>The Map Datum is used for the coordinates given in these options:</p> <p>WGS84: (Geographical 3D) - World Geodesic System 1984, CRS Code 4327, Prime Meridian Name: Greenwich.</p> <p>NAD83/NAVD88: North American Datum 1983, CRS Code 4269, Prime Meridian Name: Greenwich; The associated vertical datum is the North American Vertical Datum of 1988 (NAVD88). This datum pair is to be used when referencing locations on land, not near tidal water (which would use Datum = NAD83/MLLW).</p> <p>NAD83/MLLW: North American Datum 1983, CRS Code 4269, Prime Meridian Name: Greenwich; The associated vertical datum is Mean Lower Low Water (MLLW). This datum pair is to be used when referencing locations on water/sea/ocean.</p>

Civic Address Location

Object	Description
Civic Address Location	<p>IETF Geopriv Civic Address based Location Configuration Information (Civic Address LCI). The total number of characters for the combined civic address information must not exceed 250 characters.</p> <p>A couple of notes to the limitation of 250 characters.</p> <p>1) A non-empty civic address location will use 2 extra characters in addition to the civic address location text.</p> <p>2) The 2 letter country code is not part of the 250 characters limitation.</p>
Country code	The two-letter ISO 3166 country code in capital ASCII letters - Example: DK, DE or US.
State	National subdivisions (state, canton, region, province, prefecture).
County	County, parish, gun (Japan), district.
City	City, township, shi (Japan) - Example: Copenhagen.
City district	City division, borough, city district, ward, chou (Japan).
Block (Neighborhood)	Neighborhood, block.
Street	Street - Example: Poppelvej.
Leading street direction	Leading street direction - Example: N.
Trailing street suffix	Trailing street suffix - Example: SW.
Street suffix	Street suffix - Example: Ave, Platz.
House no.	House number - Example: 21.
House no. suffix	House number suffix - Example: A, 1/2.
Landmark	Landmark or vanity address - Example: Columbia University.
Additional location info	Additional location info - Example: South Wing.
Name	Name (residence and office occupant) - Example: Flemming Jahn.
Zip code	Postal/zip code - Example: 2791.
Building	Building (structure) - Example: Low Library.
Apartment	Unit (Apartment, suite) - Example: Apt 42.
Floor	Floor - Example: 4.

Room no.	Room number - Example: 450F.
Place type	Place type - Example: Office.
Postal community name	Postal community name - Example: Leonia.
P.O. Box	Post office box (P.O. BOX) - Example: 12345.
Additional code	Additional code - Example: 1320300003.

Emergency Call Service

Object	Description
Emergency Call Service	Emergency Call Service (e.g. E911 and others), such as defined by TIA or NENA. ELIN identifier data format is defined to carry the ELIN identifier as used during emergency call setup to a traditional CAMA or ISDN trunk-based PSAP. This format consists of a numerical digit string, corresponding to the ELIN to be used for emergency calling.

Policies

Object	Description
Policies	<p>Network Policy Discovery enables the efficient discovery and diagnosis of mismatch issues with the VLAN configuration, along with the associated Layer 2 and Layer 3 attributes, which apply for a set of specific protocol applications on that port. Improper network policy configurations are a very significant issue in VoIP environments that frequently result in voice quality degradation or loss of service.</p> <p>Policies are only intended for use with applications that have specific 'real-time' network policy requirements, such as interactive voice and/or video services</p> <p>The network policy attributes advertised are:</p> <ol style="list-style-type: none"> 1. Layer 2 VLAN ID (IEEE 802.1Q-2003) 2. Layer 2 priority value (IEEE 802.1D-2004) 3. Layer 3 Diffserv code point (DSCP) value (IETF RFC 2474) <p>This network policy is potentially advertised and associated with multiple sets of application types supported on a given port. The application types specifically addressed are:</p> <ol style="list-style-type: none"> 1. Voice 2. Guest Voice 3. Softphone Voice 4. Video Conferencing 5. Streaming Video 6. Control / Signaling (conditionally support a separate network policy for the media types above) <p>A large network may support multiple VoIP policies across the entire organization, and different policies per application type. LLDP-MED allows multiple policies to be advertised per port, each corresponding to a different application type. Different ports on the same Network Connectivity Device may advertise different sets of policies, based on the authenticated user identity or port configuration.</p> <p>It should be noted that LLDP-MED is not intended to run on links other than between Network Connectivity Devices and Endpoints, and therefore does not need to advertise the multitude of network policies that frequently run on an aggregated link interior to the LAN.</p>
Delete	Check to delete the policy. It will be deleted during the next save.

Policy ID	ID for the policy. This is auto generated and shall be used when selecting the policies that shall be mapped to the specific interfaces.
Application Type	<p>Intended use of the application types:</p> <ol style="list-style-type: none"> 1. Voice - for use by dedicated IP Telephony handsets and other similar appliances supporting interactive voice services. These devices are typically deployed on a separate VLAN for ease of deployment and enhanced security by isolation from data applications. 2. Voice Signaling (conditional) - for use in network topologies that require a different policy for the voice signaling than for the voice media. This application type should not be advertised if all the same network policies apply as those advertised in the Voice application policy. 3. Guest Voice - support a separate 'limited feature-set' voice service for guest users and visitors with their own IP Telephony handsets and other similar appliances supporting interactive voice services. 4. Guest Voice Signaling (conditional) - for use in network topologies that require a different policy for the guest voice signaling than for the guest voice media. This application type should not be advertised if all the same network policies apply as those advertised in the Guest Voice application policy. 5. Softphone Voice - for use by softphone applications on typical data centric devices, such as PCs or laptops. This class of endpoints frequently does not support multiple VLANs, if at all, and are typically configured to use an 'untagged' VLAN or a single 'tagged' data specific VLAN. When a network policy is defined for use with an 'untagged' VLAN (see Tagged flag below), then the L2 priority field is ignored and only the DSCP value has relevance. 6. Video Conferencing - for use by dedicated Video Conferencing equipment and other similar appliances supporting real-time interactive video/audio services. 7. Streaming Video - for use by broadcast or multicast-based video content distribution and other similar applications supporting streaming video services that require specific network policy treatment. Video applications relying on TCP with buffering would not be an intended use of this application type. 8. Video Signaling (conditional) - for use in network topologies that require a separate policy for the video signaling than for the video media. This application type should not be advertised if all the same network policies apply as those advertised in the Video Conferencing application policy.
Tag	<p>Tag indicating whether the specified application type is using a 'tagged' or an 'untagged' VLAN.</p> <p>Untagged indicates that the device is using an untagged frame format and as such does not include a tag header as defined by IEEE 802.1Q-2003. In this case, both the VLAN ID and the Layer 2 priority fields are ignored and only the DSCP value has relevance.</p> <p>Tagged indicates that the device is using the IEEE 802.1Q tagged frame format, and that both the VLAN ID and the Layer 2 priority values are being used, as well as the DSCP value. The tagged format includes an additional field, known as the tag header. The tagged frame format also includes priority tagged frames as defined by IEEE 802.1Q-2003.</p>
VLAN ID	VLAN identifier (VID) for the interface as defined in IEEE 802.1Q-2003.
L2 Priority	L2 Priority is the Layer 2 priority to be used for the specified application type. L2 Priority may specify one of eight priority levels (0 through 7), as defined by IEEE 802.1D-2004. A value of 0 represents use of the default priority as defined in IEEE 802.1D-2004.

DSCP	DSCP value to be used to provide Diffserv node behavior for the specified application type as defined in IETF RFC 2474. DSCP may contain one of 64 code point values (0 through 63). A value of 0 represents use of the default DSCP value as defined in RFC 2475.
-------------	--

Adding a new policy

Object	Description
Adding a new policy	Click Add New Policy to add a new policy. Specify the Application type, Tag, VLAN ID, L2 Priority and DSCP for the new policy. Click "Save". The number of policies supported is 32
Policies Interface Configuration	Every interface may advertise a unique set of network policies or different attributes for the same network policies, based on the authenticated user identity or interface configuration.
Interface	The interface name to which the configuration applies.
Policy Id	The set of policies that shall apply to a given interface. The set of policies is selected by check marking the checkboxes that corresponds to the policies.

Buttons

Add New Policy: Click to add a new policy.

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

Local Interface	Chassis ID	Port ID	Port Description	System Name	System Capabilities	Management Address
No neighbor information found						

LLDP Neighbor Information

The displayed table contains a row for each interface on which an LLDP neighbor is detected. The columns hold the following information.

Object	Description
Local Interface	The interface on which the LLDP frame was received.
Chassis ID	The Chassis ID is the identification of the neighbor's LLDP frames.
Port ID	The Port ID is the identification of the neighbor port.
Port Description	Port Description is the port description advertised by the neighbor unit.
System Name	System Name is the name advertised by the neighbor unit.
System Capabilities	System Capabilities describes the neighbor unit's capabilities. 1. Other 2. Repeater 3. Bridge 4. WLAN Access Point 5. Router 6. Telephone 7. DOCSIS cable device 8. Station only 9. Reserved When a capability is enabled, the capability is followed by (+). If the capability is disabled, the capability is followed by (-).
Management Address	Management Address is the neighbor unit's address that is used for higher layer entities to assist discovery by the network management. This could for instance hold the neighbor's IP address.

LLDP-MED Neighbor Information

The displayed table contains a row for each interface on which an LLDP neighbor is detected. This function applies to VoIP devices which support LLDP-MED. The columns hold the following information.

Object	Description
Interface	The interface on which the LLDP frame was received.
Device Type	<p>LLDP-MED Devices are comprised of two primary Device Types: Network Connectivity Devices and Endpoint Devices.</p> <p>LLDP-MED Network Connectivity Device Definition LLDP-MED Network Connectivity Devices, as defined in TIA-1057, provide access to the IEEE 802 based LAN infrastructure for LLDP-MED Endpoint Devices. An LLDP-MED Network Connectivity Device is a LAN access device based on any of the following technologies:</p> <ol style="list-style-type: none"> 1. LAN Switch/Router 2. IEEE 802.1 Bridge 3. IEEE 802.3 Repeater (included for historical reasons) 4. IEEE 802.11 Wireless Access Point 5. Any device that supports the IEEE 802.1AB and MED extensions defined by TIA-1057 and can relay IEEE 802 frames via any method. <p>LLDP-MED Endpoint Device Definition LLDP-MED Endpoint Devices, as defined in TIA-1057, are located at the IEEE 802 LAN network edge, and participate in IP communication service using the LLDP-MED framework.</p> <p>Within the LLDP-MED Endpoint Device category, the LLDP-MED scheme is broken into further Endpoint Device Classes, as defined in the following.</p> <p>Each LLDP-MED Endpoint Device Class is defined to build upon the capabilities defined for the previous Endpoint Device Class. For-example will any LLDP-MED Endpoint Device claiming compliance as a Media Endpoint (Class II) also support all aspects of TIA-1057 applicable to Generic Endpoints (Class I), and any LLDP-MED Endpoint Device claiming compliance as a Communication Device (Class III) will also support all aspects of TIA-1057 applicable to both Media Endpoints (Class II) and Generic Endpoints (Class I).</p> <p>LLDP-MED Generic Endpoint (Class I) The LLDP-MED Generic Endpoint (Class I) definition is applicable to all endpoint products that require the base LLDP discovery services defined in TIA-1057, however do not support IP media or act as an end-user communication appliance. Such devices may include (but are not limited to) IP Communication Controllers, other communication related servers, or any device requiring basic services as defined in TIA-1057. Discovery services defined in this class include LAN configuration, device location, network policy, power management, and inventory management.</p> <p>LLDP-MED Media Endpoint (Class II) The LLDP-MED Media Endpoint (Class II) definition is applicable to all endpoint products that have IP media capabilities however may or may not be associated with a</p>

	<p>particular end user. Capabilities include all of the capabilities defined for the previous Generic Endpoint Class (Class I), and are extended to include aspects related to media streaming. Example product categories expected to adhere to this class include (but are not limited to) Voice / Media Gateways, Conference Bridges, Media Servers, and similar. Discovery services defined in this class include media-type-specific network layer policy discovery.</p> <p>LLDP-MED Communication Endpoint (Class III) The LLDP-MED Communication Endpoint (Class III) definition is applicable to all endpoint products that act as end user communication appliances supporting IP media. Capabilities include all of the capabilities defined for the previous Generic Endpoint (Class I) and Media Endpoint (Class II) classes, and are extended to include aspects related to end user devices. Example product categories expected to adhere to this class include (but are not limited to) end user communication appliances, such as IP Phones, PC-based softphones, or other communication appliances that directly support the end user.</p> <p>Discovery services defined in this class include provision of location identifier (including ECS / E911 information), embedded L2 switch support, inventory management.</p>
LLDP-MED Capabilities	<p>LLDP-MED Capabilities describes the neighbor unit's LLDP-MED capabilities. The possible capabilities are:</p> <ol style="list-style-type: none"> 1. LLDP-MED capabilities 2. Network Policy 3. Location Identification 4. Extended Power via MDI – PSE 5. Extended Power via MDI – PD 6. Inventory 7. Reserved
Application Type	<p>Application Type indicating the primary function of the application(s) defined for this network policy, advertised by an Endpoint or Network Connectivity Device. The possible application types are shown below.</p> <ol style="list-style-type: none"> 1. Voice - for use by dedicated IP Telephony handsets and other similar appliances supporting interactive voice services. These devices are typically deployed on a separate VLAN for ease of deployment and enhanced security by isolation from data applications. 2. Voice Signalling - for use in network topologies that require a different policy for the voice signalling than for the voice media. 3. Guest Voice - to support a separate limited feature-set voice service for guest users and visitors with their own IP Telephony handsets and other similar appliances supporting interactive voice services. 4. Guest Voice Signalling - for use in network topologies that require a different policy for the guest voice signalling than for the guest voice media. 5. Softphone Voice - for use by softphone applications on typical data centric devices, such as PCs or laptops. 6. Video Conferencing - for use by dedicated Video Conferencing equipment and other similar appliances supporting real-time interactive video/audio services. 7. Streaming Video - for use by broadcast or multicast based video content distribution and other similar applications supporting streaming video services that require specific network policy treatment. Video applications relying on TCP with buffering would not be an intended use of this application type. 8. Video Signalling - for use in network topologies that require a separate policy for the video signalling than for the video media.
Policy	<p>Policy indicates that an Endpoint Device wants to explicitly advertise that the policy is required by the device.</p> <p>Unknown: The network policy for the specified application type is currently unknown. Defined: The network policy is defined (known).</p>
TAG	<p>TAG is indicative of whether the specified application type is using a tagged or an untagged VLAN.</p> <p>Untagged: The device is using an untagged frame format and as such does not include a tag header as defined by IEEE 802.1Q-2003. Tagged: The device is using the IEEE 802.1Q tagged frame format.</p>
VLAN ID	<p>VLAN ID is the VLAN identifier (VID) for the interface as defined in IEEE 802.1Q-2003. A value of 1 through 4094 is used to define a valid VLAN ID. A value of 0 (Priority Tagged) is used if the device is using priority tagged frames as defined by IEEE 802.1Q-2003, meaning that only the IEEE 802.1D priority level is significant and the default PVID of the ingress interface is used instead.</p>

Priority	Priority is the Layer 2 priority to be used for the specified application type. One of the eight priority levels (0 through 7).
DSCP	DSCP is the DSCP value to be used to provide Diffserv node behavior for the specified application type as defined in IETF RFC 2474. Contain one of 64 code point values (0 through 63).
Auto-negotiation	Auto-negotiation identifies if MAC/PHY auto-negotiation is supported by the link partner.
Auto-negotiation status	Auto-negotiation status identifies if auto-negotiation is currently enabled at the link partner. If Auto-negotiation is supported and Auto-negotiation status is disabled, the 802.3 PMD operating mode will be determined the operational MAU type field value rather than by auto-negotiation.
Auto-negotiation Capabilities	Auto-negotiation Capabilities shows the link partners MAC/PHY capabilities.

6.7.2.3. EEE

WEB MENU Monitor>LLDP>EEE

By using EEE power savings can be achieved at the expense of traffic latency. This latency occurs due to that the circuits EEE turn off to save power, need time to boot up before sending traffic over the link. This time is called "wakeup time". To achieve minimal latency, devices can use LLDP to exchange information about their respective tx and rx "wakeup time ", as a way to agree upon the minimum wakeup time they need.

This page provides an overview of EEE information exchanged by LLDP.

LLDP Neighbors EEE Information

Local Interface	Tx Tw	Rx Tw	Fallback Receive Tw	Echo Tx Tw	Echo Rx Tw	Resolved Tx Tw	Resolved Rx Tw	EEE in Sync
No LLDP EEE information found								

LLDP Neighbors EEE Information

The displayed table contains a row for each interface.

If the interface does not supports EEE, then it displays as "EEE not supported for this interface".

If EEE is not enabled on particular interface, then it displays as "EEE not enabled for this interface".

If the link partner doesn't supports EEE, then it displays as "Link partner is not EEE capable".

The columns hold the following information.

Object	Description
Local Interface	The interface at which LLDP frames are received or transmitted.
Tx Tw	The link partner's maximum time that transmit path can hold-off sending data after dissertation of LPI.
Rx Tw	The link partner's time that receiver would like the transmitter to hold-off to allow time for the receiver to wake from sleep.
Fallback Receive Tw	The link partner's fallback receive Tw. A receiving link partner may inform the transmitter of an alternate desired Tw sys Tx. Since a receiving link partner is likely to have discrete levels for savings, this provides the transmitter with additional information that it may use for a more efficient allocation. Systems that do not implement this option default the value to be the same as that of the Receive Tw sys Tx.
Echo Tx Tw	The link partner's Echo Tx Tw value. The respective echo values shall be defined as the local link partners reflection (echo) of the remote link partners respective values. When a local link partner receives its echoed values from the remote link partner it can determine whether or not the remote link partner has received, registered and processed its most recent values. For example, if the local link partner receives echoed parameters that do not match the values in its local MIB, then the local link partner infers that the remote link partners request was based on stale information.
Echo Rx Tw	The link partner's Echo Rx Tw value.
Resolved Tx Tw	The resolved Tx Tw for this link. Note : NOT the link partner The resolved value that is the actual "tx wakeup time " used for this link (based on EEE information exchanged via LLDP).
Resolved Rx Tw	The resolved Rx Tw for this link. Note : NOT the link partner The resolved value that is the actual "tx wakeup time " used for this link (based on EEE information exchanged via LLDP).
EEE in Sync	Shows whether the switch and the link partner have agreed on wake times. Red - Switch and link partner have not agreed on wakeup times.

Green - Switch and link partner have agreed on wakeup times.

LLDP Global Counters

Object	Description
Global Counters	Global counters are counters that refer to the whole switch
Clear global counters	If checked the global counters are cleared when CLEAR is pressed.
Neighbor entries were last changed	Shows the time when the last entry was last deleted or added. It also shows the time elapsed since the last change was detected.
Total Neighbors Entries Added	Shows the number of new entries added since switch reboot.
Total Neighbors Entries Deleted	Shows the number of new entries deleted since switch reboot.
Total Neighbors Entries Dropped	Shows the number of LLDP frames dropped due to the entry table being full.
Total Neighbors Entries Aged Out	Shows the number of entries deleted due to Time-To-Live expiring.

LLDP Statistics Local Counters

Object	Description
Local Counters	Local counters refer to per interface counters for the currently selected switch.
Local Interface	The interface on which LLDP frames are received or transmitted.
Tx Frames	The number of LLDP frames transmitted on the interface.
Rx Frames	The number of LLDP frames received on the interface.
Rx Errors	The number of received LLDP frames containing some kind of error.
Frames Discarded	If a LLDP frame is received on a interface, and the switch's internal table has run full, the LLDP frame is counted and discarded. This situation is known as "Too Many Neighbors" in the LLDP standard. LLDP frames require a new entry in the table when

	the Chassis ID or Remote Port ID is not already contained within the table. Entries are removed from the table when a given interface's link is down, an LLDP shutdown frame is received, or when the entry ages out.
TLVs Discarded	Each LLDP frame can contain multiple pieces of information, known as TLVs (TLV is short for "Type Length Value"). If a TLV is malformed, it is counted and discarded.
TLVs Unrecognized	The number of well-formed TLVs, but with an unknown type value.
Org. Discarded	If LLDP frame is received with an organizationally TLV, but the TLV is not supported the TLV is discarded and counted.
Age-Outs	Each LLDP frame contains information about how long time the LLDP information is valid (age-out time). If no new LLDP frame is received within the age out time, the LLDP information is removed, and the Age-Out counter is incremented.
Clear	If checked the counters for the specific interface are cleared when Clear is pressed.

Buttons

Auto-refresh : Check this box to refresh the page automatically. Automatic refresh every 3 seconds.

: Click to refresh the page.

: Clears the local counters. All counters (including global counters) are cleared upon reboot.

Maintenance Entity Point

Object	Description
Delete	This box is used to mark a MEP for deletion in next Save operation.
Instance	The ID of the MEP. Click on the ID of a MEP to enter the configuration page. The range is from 1 through 100.
Domain	Port: This is a MEP in the Port Domain.
Mode	MEP: This is a Maintenance Entity End Point. MIP: This is a Maintenance Entity Intermediate Point.
Direction	Down: This is a Down MEP - monitoring ingress OAM and traffic on 'Residence Port'. Up: This is a Up MEP - monitoring egress OAM and traffic on 'Residence Port'.
Residence Port	The port where MEP is monitoring - see 'Direction'. For a EVC MEP the port must be a port in the EVC. For a VLAN MEP the port must be a VLAN member.
Level	The MEG level of this MEP.
Flow Instance	The MEP is related to this flow - See 'Domain'. This is not relevant and not shown in case of Port MEP.
Tagged VID	Port MEP: An outer C/S-tag (depending on VLAN Port Type) is added with this VID. Entering '0' means no TAG added. EVC MEP: This is not used. VLAN MEP: This is not used. EVC MIP: On Serval, this is the Subscriber VID that identify the subscriber flow in this EVC where the MIP is active.
This MAC	The MAC of this MEP - can be used by other MEP when unicast is selected (Info only).
Alarm	There is an active alarm on the MEP.

Buttons

Add New MEP : Click to add a new MEP entry.

Refresh : Click to refresh the page immediately.

Apply : Click to apply changes.

Apply&Save : Click to apply and save changes.

Reset : Click to undo any changes made locally and revert to previously saved values.

Instance Data

Object	Description
MEP Instance	The ID of the MEP.
Domain	See help on MEP create WEB.
Mode	See help on MEP create WEB.
Direction	See help on MEP create WEB.
Residence Port	See help on MEP create WEB.
Flow Instance	See help on MEP create WEB.
Tagged VID	See help on MEP create WEB.
This MAC	See help on MEP create WEB.

Instance Configuration

Object	Description
Level	See help on MEP create WEB.
Format	<p>This is the configuration of the two possible Maintenance Association Identifier formats.</p> <p>ITU ICC: This is defined by ITU (Y1731 Fig. A3). 'Domain Name' is not used. 'MEG id' must be max. 13 char.</p> <p>IEEE String: This is defined by IEEE (802.1ag Section 21.6.5). 'Domain Name' can be max. 16 char. 'MEG id' (Short MA Name) can be max. 16 char.</p> <p>ITU CC ICC: This is defined by ITU (Y1731 Fig. A5). 'Domain Name' is not used. 'MEG id' must be max. 15 char.</p>

Domain Name	This is the IEEE Maintenance Domain Name and is only used in case of 'IEEE String' format. This string can be empty giving Maintenance Domain Name Format 1 - Not present. This can be max 16 char.
MEG Id	This is either ITU MEG ID or IEEE Short MA Name - depending on 'Format'. See 'Format'. In case of ITU ICC format this must be 13 char. In case of ITU CC ICC format this must be 15 char. In case of IEEE String format this can be max 16 char.
MEP Id	This value will become the transmitted two byte CCM MEP ID.
Tagged VID	This value will be the VID of a TAG added to the OAM PDU.
VOE	This will attempt to utilize VOE HW for MEP implementation. Not all platforms support VOE.
cLevel	Fault Cause indicating that a CCM is received with a lower level than the configured for this MEP.
cMEG	Fault Cause indicating that a CCM is received with a MEG ID different from configured for this MEP.
cMEP	Fault Cause indicating that a CCM is received with a MEP ID different from all 'Peer MEP ID' configured for this MEP.
cAIS	Fault Cause indicating that AIS PDU is received.
cLCK	Fault Cause indicating that LCK PDU is received.
cDEG	Fault Cause indicating that server layer is indicating Signal Degraded.
cSSF	Fault Cause indicating that server layer is indicating Signal Fail.
aBLK	The consequent action of blocking service frames in this flow is active.
aTSD	The consequent action of indicating Trail Signal Degrade is calculated.
aTSF	The consequent action of indicating Trail Signal Fail to-wards protection is active.

Peer MEP Configuration

Object	Description
Delete	This box is used to mark a Peer MEP for deletion in next Save operation.
Peer MEP ID	This value will become an expected MEP ID in a received CCM - see 'cMEP'.
Unicast Peer MAC	This MAC will be used when unicast is selected with this peer MEP. Also this MAC is used to create HW checking of receiving CCM PDU (LOC detection) from this MEP.
cLOC	Fault Cause indicating that no CCM has been received (in 3,5 periods) - from this peer MEP.
cRDI	Fault Cause indicating that a CCM is received with Remote Defect Indication - from this peer MEP.
cPeriod	Fault Cause indicating that a CCM is received with a period different what is configured for this MEP - from this peer MEP.
cPriority	Fault Cause indicating that a CCM is received with a priority different what is configured for this MEP - from this peer MEP.

Functional Configuration

Continuity Check

Object	Description
Enable	Continuity Check based on transmitting/receiving CCM PDU can be enabled/disabled. The CCM PDU is always transmitted as Multi-cast Class 1.

Priority	The priority to be inserted as PCP bits in TAG (if any). In case of enable of Continuity Check and Loss Measurement both implemented on SW based CCM, 'Priority' has to be the same.
Frame rate	<p>Selecting the frame rate of CCM PDU. This is the inverse of transmission period as described in Y.1731. This value has the following uses:</p> <ul style="list-style-type: none"> * The transmission rate of the CCM PDU. * Fault Cause cLOC is declared if no CCM PDU has been received within 3.5 periods - see 'cLOC'. * Fault Cause cPeriod is declared if a CCM PDU has been received with different period - see 'cPeriod'. <p>Selecting 300f/sec or 100f/sec will configure HW based CCM (if possible). Selecting other frame rates will configure SW based CCM. In case of enable of Continuity Check and Loss Measurement both implemented on SW based CCM, 'Frame Rate' has to be the same.</p>
TLV	Enable/disable of TLV insertion in the CCM PDU.

APS Protocol

Object	Description
Enable	Automatic Protection Switching protocol information transportation based on transmitting/receiving R-APS/L-APS PDU can be enabled/disabled. Must be enabled to support ERPS/ELPS implementing APS. This is only valid with one Peer MEP configured.
Priority	The priority to be inserted as PCP bits in TAG (if any).
Cast	Selection of APS PDU transmitted unicast or multi-cast. The unicast MAC will be taken from the 'Unicast Peer MAC' configuration. Unicast is only valid for L-APS - see 'Type'. The R-APS PDU is always transmitted with multi-cast MAC described in G.8032.
Type	R-APS: APS PDU is transmitted as R-APS - this is for ERPS. L-APS: APS PDU is transmitted as L-APS - this is for ELPS.
Last Octet	This is the last octet of the transmitted and expected RAPS multi-cast MAC. In G.8031 (03/2010) a RAPS multi-cast MAC is defined as 01-19-A7-00-00-XX. In current standard the value for this last octet is '01' and the usage of other values is for further study.

TLV Configuration

Configuration of the OAM PDU TLV. Currently only TLV in the CCM is supported.

Object	Description
Organization Specific	
- OUI First	The transmitted first value in the OS TLV OUI field.
- OUI Second	The transmitted second value in the OS TLV OUI field.
- OUI Third	The transmitted third value in the OS TLV OUI field.
- Sub-Type	The transmitted value in the OS TLV Sub-Type field.
- Value	The transmitted value in the OS TLV Value field.

TLV Status

Display of the last received TLV. Currently only TLV in the CCM is supported.

Object	Description
CC Organization	The last received first value in the OS TLV OUI field.

Specific	
- OUI First	
- OUI Second	The last received second value in the OS TLV OUI field.
- OUI Third	The last received third value in the OS TLV OUI field.
- Sub-Type	The last received value in the OS TLV Sub-Type field.
- Value	The last received value in the OS TLV Value field.
- Last RX	OS TLV was received in the last received CCM PDU.
CC Port Status	
- Value	The last received value in the PS TLV Value field.
- Last RX	PS TLV was received in the last received CCM PDU.
CC Interface Status	
- Value	The last received value in the IS TLV Value field.
- Last RX	IS TLV was received in the last received CCM PDU.

Link State Tracking

Object	Description
Enable	When LST is enabled in an instance, Local SF or received 'isDown' in CCM Interface Status TLV, will bring down the residence port. Only valid in Up-MEP. The CCM rate must be 1 f/s or faster.

Loop Back

Object	Description
Enable	Loop Back based on transmitting/receiving LBM/LBR PDU can be enabled/disabled. Loop Back is automatically disabled when all 'To Send' LBM PDU has been transmitted - waiting 5 sec. for all LBR from the end.
DEI	The DEI to be inserted as PCP bits in TAG (if any).
Priority	The priority to be inserted as PCP bits in TAG (if any).

Cast	Selection of LBM PDU transmitted unicast or multi-cast. The unicast MAC will be configured through 'Peer MEP' or 'Unicast Peer MAC'. To-towards MIP only unicast Loop Back is possible.
Peer MEP	This is only used if the 'Unicast MAC' is configured to all zero. The LBM unicast MAC will be taken from the 'Unicast Peer MAC' configuration of this peer.
Unicast MAC	This is only used if NOT configured to all zero. This will be used as the LBM PDU unicast MAC. This is the only way to configure Loop Back to-towards a MIP.
To Send	The number of LBM PDU to send in one loop test. The value 0 indicate infinite transmission (test behavior). This is HW based LBM/LBR and Requires VOE.
Size	<p>The LBM frame size. This is entered as the wanted size (in bytes) of a un-tagged frame containing LBM OAM PDU - including CRC (four bytes).</p> <p>Example when 'Size' = 64=> Un-tagged frame size = DMAC(6) + SMAC(6) + TYPE(2) + LBM PDU LENGTH(46) + CRC(4) = 64 bytes</p> <p>The transmitted frame will be four bytes longer for each tag added - 8 bytes in case of a tunnel EVC.</p> <p>There are two frame MAX sizes to consider.</p> <p>Switch RX frame MAX size: The MAX frame size (all inclusive) accepted on the switch port of 10240 Bytes</p> <p>CPU RX frame MAX size: The MAX frame size (all inclusive) possible to copy to CPU of 1526 Bytes</p> <p>Consider that the Peer MEP must be able to handle the selected frame size. Consider that In case of SW based MEP, the received LBR PDU must be copied to CPU</p> <p>Warning will be given if selected frame size exceeds the CPU RX frame MAX size</p> <p>Frame MIN Size is 64 Bytes.</p>
Interval	The interval between transmitting LBM PDU. In 10ms. in case 'To Send' != 0 (max 100 - '0' is as fast as possible) In 1us. in case 'To Send' == 0 (max 10.000)".

Loop Back State

Object	Description
Transaction ID	The transaction id of the first LBM transmitted. For each LBM transmitted the transaction id in the PDU is incremented.
Transmitted	The total number of LBM PDU transmitted.
Reply MAC	The MAC of the replying MEP/MIP. In case of multi-cast LBM, replies can be received from all peer MEP in the group. This MAC is not shown in case of 'To Send' == 0.
Received	The total number of LBR PDU received from this 'Reply MAC'.
Out Of Order	The number of LBR PDU received from this 'Reply MAC' with incorrect 'Transaction ID'.

Link Trace

Object	Description
Enable	Link Trace based on transmitting/receiving LTM/LTR PDU can be enabled/disabled. Link Trace is automatically disabled when all 5 transactions are done with 5 sec. interval - waiting 5 sec. for all LTR in the end. The LTM PDU is always transmitted as Multi-cast Class 2.
Priority	The priority to be inserted as PCP bits in TAG (if any).
Peer MEP	This is only used if the 'Unicast MAC' is configured to all zero. The Link Trace Target MAC will be taken from the 'Unicast Peer MAC' configuration of this peer.

Unicast MAC	This is only used if NOT configured to all zero. This will be used as the Link Trace Target MAC. This is the only way to configure a MIP as Target MAC.
Time To Live	This is the LTM PDU TTL value as described in Y.1731. This value is decremented each time forwarded by a MIP. Will not be forwarded reaching zero.

Link Trace State

Object	Description
Transaction ID	The transaction id is incremented for each LTM send. This value is inserted the transmitted LTM PDU and is expected to be received in the LTR PDU. Received LTR with wrong transaction id is ignored. There are five transactions in one Link Trace activated.
Time To Live	This is the TTL value taken from the LTM received by the MIP/MEP sending this LTR - decremented as if forwarded.
Mode	Indicating if it was a MEP/MIP sending this LTR.
Direction	Indicating if MEP/MIP sending this LTR is ingress/egress.
Forwarded	Indicating if MEP/MIP sending this LTR has forwarded the LTM.
Relay	The Relay action can be one of the following MAC: The was a hit on the LT Target MAC FDB: LTM is forwarded based on hit in the Filtering DB MFDB: LTM is forwarded based on hit in the MIP CCM DB
Last MAC	The MAC identifying the last sender of the LBM causing this LTR - initiating MEP or previous MIP forwarding.
Next MAC	The MAC identifying the next sender of the LBM causing this LTR - MIP forwarding or terminating MEP.

Test Signal

Object	Description
Enable	Test Signal based on transmitting TEST PDU can be enabled/disabled.
DEI	The DEI to be inserted as PCP bits in TAG (if any).
Priority	The priority to be inserted as PCP bits in TAG (if any).
Peer MEP	The TEST frame destination MAC will be taken from the 'Unicast Peer MAC' configuration of this peer.
Rate	The transmission rate of the test frame.
Size	The TEST frame size. This is entered as the wanted size (in bytes) of a un-tagged frame containing TEST OAM PDU - including CRC (four bytes). Example when 'Size' = 64=> Un-tagged frame size = DMAC(6) + SMAC(6) + TYPE(2) + TEST PDU LENGTH(46) + CRC(4) = 64 bytes The transmitted frame will be four bytes longer for each tag added - 8 bytes in case of a tunnel EVC. There are two frame MAX sizes to consider. Switch RX frame MAX size: The MAX frame size (all inclusive) accepted on the switch port of 10240 Bytes CPU RX frame MAX size: The MAX frame size (all inclusive) possible to copy to CPU of 1526 Bytes Consider that the Peer MEP must be able to handle the selected frame size. Consider that in order to calculate the 'RX rate' a received TEST PDU must be copied to CPU

	Warning will be given if selected frame size exceeds the CPU RX frame MAX size Frame MIN Size is 64 Bytes.
Pattern	The 'empty' TEST PDU has the size of 12 bytes. In order to achieve the configured frame size a data TLV will be added with a pattern. Example when 'Size' = 64=> Un-tagged frame size = DMAC(6) + SMAC(6) + TYPE(2) + TEST PDU LENGTH(46) + CRC(4) = 64 bytes The TEST PDU needs to be 46 bytes so a pattern of 46-12=34 bytes will be added. All Zero: Pattern will be '00000000' All One: Pattern will be '11111111' 10101010: Pattern will be '10101010'

Test Signal State

Object	Description
TX frame count	The number of transmitted TEST frames since last 'Clear'.
RX frame count	The number of received TEST frames since last 'Clear'.
RX rate	The current received TEST frame bit rate in Kbps. This is calculated on a 1 s. basis, starting when first TEST frame is received after 'Clear'. The frame size used for this calculation is the first received after 'Clear'
Test time	The number of seconds passed since first TEST frame received after last 'Clear'.
Clear	This will clear all Test Signal State. Transmission of TEST frame will be restarted. Calculation of 'Rx frame count', 'RX rate' and 'Test time' will be started when receiving first TEST frame.

Client Configuration

Only a Port MEP is able to be a server MEP with flow configuration. The Priority in the client flow is always the highest priority configured in the EVC.

Object	Description
Domain	The domain of the client layer flow.
Instance	Client layer flow instance numbers.
Level	Client layer level - AIS and LCK PDU transmitted in this client layer flow will be on this level.
AIS Prio	The priority to be used when transmitting AIS in each client flow. Priority resulting in highest possible PCP can be selected.
LCK Prio	The priority to be used when transmitting LCK in each client flow. Priority resulting in highest possible PCP can be selected.

AIS

Object	Description
Enable	Insertion of AIS signal (AIS PDU transmission) in client layer flows, can be enable/disabled.
Frame Rate	Selecting the frame rate of AIS PDU. This is the inverse of transmission period as described in Y.1731.
Protection	Selecting this means that the first 3 AIS PDU is transmitted as fast as possible - in case of using this for protection in the end point.

LOCK

Object	Description
Enable	Insertion of LOCK signal (LCK PDU transmission) in client layer flows, can be enable/disabled.
Frame Rate	Selecting the frame rate of LCK PDU. This is the inverse of transmission period as described in Y.1731.:

Performance Monitoring Data Set

Object	Description
Enable	When enabled this MEP instance will contribute to the 'PM Data Set' gathered by the PM Session.

Loss Measurement

Object	Description
Tx	Loss Measurement initiator is enabled/disabled. Initiator is transmitting/receiving CCM or LMM/LMR or SLM/SLR/1SL PDUs - see 'Synthetic' and 'Ended'. Service frame LM (not 'Synthetic') is only allowed with one Peer MEP configured. Synthetic frame LM is allowed with multiple Peer MEPs configured.
Rx	Enable loss calculation when receiving LM PDUs (LMM/SLM/1SL). This is ignored when LM initiator is enabled.
Priority	The priority to be inserted as PCP bits in TAG (if any). In case of enable of Continuity Check and Loss Measurement both implemented on SW based CCM, 'Priority' has to be the same.
Cast	Selection of LM PDU transmitted unicast or multicast. The unicast MAC will be taken from the 'Unicast Peer MAC' database. In case of enable of Continuity Check and dual ended Loss Measurement both implemented on SW based CCM, 'Cast' has to be the same.
Peer MEP	Peer MEP-ID for unicast LM. The MAC is taken from the 'Unicast Peer MAC' database. Only used in case of multiple peers ('Synthetic' LM).
Rate	Selecting the frame rate of LM PDU. This is the inverse of transmission period as described in Y.1731. Selecting 100f/sec is only valid in case of 'Synthetic' LM. Selecting 6f/min is not valid in case of dual ended 'Service frame' LM (CCM PDU based). In case of enable of Continuity Check and Loss Measurement both implemented on SW based CCM, 'Frame Rate' has to be the same.
Size	The 'Synthetic' SLM/1SL frame size. This is entered as the wanted size (in bytes) of a un-tagged frame containing LM OAM PDU - including CRC (four bytes). Example when 'Size' = 64=> Un-tagged frame size = DMAC(6) + SMAC(6) + TYPE(2) + LBM PDU LENGTH(46) + CRC(4) = 64 bytes The transmitted frame will be four bytes longer for each tag added - 8 bytes in case of a tunnel EVC. There are two frame MAX sizes to consider. Switch RX frame MAX size: The MAX frame size (all inclusive) accepted on the switch port of Bytes CPU RX frame MAX size: The MAX frame size (all inclusive) possible to copy to CPU of Bytes Consider that the Peer MEP must be able to handle the selected frame size. Consider that the received SLR PDU must be copied to CPU Warning will be given if selected frame size exceeds the CPU RX frame MAX size Frame MIN Size is 64 Bytes.
Synthetic	Synthetic frame LM is enabled. This is SLM/SLR/1SL PDU based LM.
Ended	Single: Single ended Loss Measurement implemented on LMM/LMR or SLM/SLR. Dual: Dual ended Loss Measurement implemented on SW based CCM or 1SL.

FLR Interval	This is the interval in number of measurement intervals where the interval Frame Loss Ratio is calculated.
Meas Interval	This is the 'synthetic' LM measurement interval in milliseconds. This must be a whole number of the LM PDU transmission interval (inverse 'Rate'). This is the interval in time where the loss and FLR is calculated based on the counted number of SL OAM PDUs. It is in this interval that the calculated FLR is checked against availability, high loss and degraded FLR threshold. example: 'Rate' = 100f/sec => 'Meas Interval' = N*10 milliseconds. example: 'Rate' = 10f/sec => 'Meas Interval' = N*100 milliseconds. In case of service frame based LM this attribute is not used and the measurement interval is always the LM PDU transmission interval.
Loss Threshold	Far end loss threshold count is incremented if a loss measurement is above this threshold.
SLM Test ID	The Test ID value to use in SLM PDUs (see G.8013, section 9.22.1). The default value is 0.

Loss Measurement State

Object	Description
Peer MEP	The Peer MEP ID that the following state relates to.
Tx	The accumulated transmitted LM PDUs - since last 'clear'.
Rx	The accumulated received LM PDUs - since last 'clear'.
Near End Loss Count	The accumulated near end frame loss count - since last 'clear'.
Far End Loss Count	The accumulated far end frame loss count - since last 'clear'.
Interval Elapsed	The accumulated number of 'FLR Interval' elapsed - since last 'clear'.
Interval Near End Loss Ratio	The near end frame loss ratio calculated based on the near end frame loss count and far end frame transmitted - in the latest 'FLR Interval'. This is shown in $(Loss/Tx)*10000$. Same as 1/100 Percent.
Interval Far End Loss Ratio	The far end frame loss ratio calculated based on the far end frame loss count and near end frame transmitted - in the latest 'FLR Interval'. This is shown in $(Loss/Tx)*10000$. Same as 1/100 Percent.
Total Near End Loss Ratio	The near end frame loss ratio calculated based on the near end frame loss count and far end frame transmitted - since last 'clear'. This is shown in $(Loss/Tx)*10000$. Same as 1/100 Percent.
Interval Far End Loss Ratio	The far end frame loss ratio calculated based on the far end frame loss count and near end frame transmitted - since last 'clear'. This is shown in $(Loss/Tx)*10000$. Same as 1/100 Percent.
Clear	Set of this check and save will clear the accumulated counters and restart ratio calculation.

Loss Measurement Availability

Object	Description
Enable	Enable/disable of loss measurement availability.
Interval	Availability interval - number of measurements with same availability in order to change availability state. The valid range is 1 to 1000.
FLR Threshold	Availability frame loss ratio threshold in per mile.

Maintenance	Enable/disable of loss measurement availability maintenance.
--------------------	--

Loss Measurement Availability Status

Object	Description
Near Avail Count	The number of measurements performed while the near end has been in the "Avail" state.
Far Avail Count	The number of measurements performed while the far end has been in the "Avail" state.
Near Unavail Count	The number of measurements performed while the near end has been in the "Unavail" state.
Far Unavail Count	The number of measurements performed while the far end has been in the "Unavail" state.
Near Window Curr	The current near-end availability window size. When Near State is "Avail" this value indicate the current number of consecutive measurements that are above the defined frame loss ratio threshold. When Near State is "Unavail" this value indicate the current number of consecutive measurements that are equal to or below the defined frame loss ratio threshold. Once this value reaches the defined "Interval" value (aka. the "window size") the availability state will change.
Far Window Curr	The current far-end availability window size. See the description for Near Window Curr for more details.
Near State	The current near end availability state.
Far State	The current far end availability state.

Loss Measurement High Loss Interval

Object	Description
Enable	Enable/disable of loss measurement high loss interval.
FLR Threshold	High Loss Interval frame loss ratio threshold in per mile.
Consecutive Interval	High Loss Interval consecutive interval (number of measurements).

Loss Measurement High Loss Interval Status

Object	Description
Near Count	Near end high loss interval count (number of measurements where availability state is available and FLR is above high loss interval FLR threshold).
Far Count	Far end high loss interval count (number of measurements where availability state is available and FLR is above high loss interval FLR threshold).
Near Consecutive Count	Near end high loss interval consecutive count.
Far Consecutive Count	Far end high loss interval consecutive count.

Loss Measurement Signal Degrade

Object	Description
Enable	Enable/disable of loss measurement signal degrade.
TX Minimum	Minimum number of frames that must be transmitted in a measurement before frame loss ratio is tested against loss ratio threshold.

FLR Threshold	Signal Degraded frame loss ratio threshold in per mille.
Bad Threshold	Number of consecutive bad interval measurements required to set degrade state.
Good Threshold	Number of consecutive good interval measurements required to clear degrade state.

Delay Measurement

Object	Description
Enable	Delay Measurement based on transmitting 1DM/DMM PDU can be enabled/disabled. Delay Measurement based on receiving and handling 1DM/DMR PDU is always enabled.
Priority	The priority to be inserted as PCP bits in TAG (if any).
Cast	Selection of 1DM/DMM PDU transmitted unicast or multicast. The unicast MAC will be configured through 'Peer MEP'.
Peer MEP	This is only used if the 'Cast' is configured to Uni. The 1DM/DMR unicast MAC will be taken from the 'Unicast Peer MAC' configuration of this peer.
Ended	Single: Single ended Delay Measurement implemented on DMM/DMR. Dual: Dual ended Delay Measurement implemented on 1DM.
Tx Mode	Standardize: Y.1731 standardize way to transmit 1DM/DMR. Proprietary: Vitesse proprietary way with follow-up packets to transmit 1DM/DMR.
Calc	This is only used if the 'Ended' is configured to single ended. Round trip: The frame delay calculated by the transmitting and receiving timestamps of initiators. $\text{Frame Delay} = \text{RxTime} - \text{TxTimeStamp}$ Flow: The frame delay calculated by the transmitting and receiving timestamps of initiators and remotes. $\text{Frame Delay} = (\text{RxTime} - \text{TxTimeStamp}) - (\text{TxTimeStamp} - \text{RxTimeStamp})$
Gap	The gap between transmitting 1DM/DMM PDU in 10ms. The range is 10 to 65535.
Count	The number of last records to calculate. The range is 10 to 2000.
Unit	The time resolution.
Synchronized	Enable to use DMM/DMR packet to calculate dual ended DM. If the option is enabled, the following action will be taken. When DMR is received, two-way delay (roundtrip or flow) and both near-end-to-far-end and far-end-to-near-end one-way delay are calculated. When DMM or 1DM is received, only far-end-to-near-end one-way delay is calculated.
Counter Overflow Action	The action to counter when overflow happens.

Delay Measurement State

Object	Description
Tx	The accumulated transmit count - since last 'clear'.
Rx	The accumulated receive count - since last 'clear'.
Rx Timeout	The accumulated receive timeout count for two-way only - since last 'clear'.
Rx Error	The accumulated receive error count - since last 'clear'. This is counting if the frame delay is larger than 1 second or if far end residence time is larger than the round trip time.
Av Delay Tot	The average total delay - since last 'clear'.

Av Delay last N	The average delay of the last n packets - since last 'clear'.
Delay Min.	The minimum delay - since last 'clear'.
Delay Max.	The maximum delay - since last 'clear'.
Av Delay-Var Tot	The average total delay variation - since last 'clear'.
Av Delay-Var last N	The average delay variation of the last n packets - since last 'clear'.
Delay-Var Min.	The minimum delay variation - since last 'clear'.
Delay-Var Max.	The maximum delay variation - since last 'clear'.
Overflow	The number of counter overflow - since last 'clear'.
Clear	Set of this check and save will clear the accumulated counters.
Far-end-to-near-end one-way delay	The one-way delay is from remote devices to the local devices. Here are the conditions to calculate this delay. 1. 1DM received. 2. DMM received with Synchronized enabled. 3. DMR received with Synchronized enabled.
Near-end-to-far-end one-way delay	The one-way delay is from the local devices to remote devices. The only case to calculate this delay is below. DMR received with Synchronized enabled.

Delay Measurement Bins

A Measurement Bin is a counter that stores the number of delay measurements falling within a specified range, during a Measurement Interval.

Object	Description
Measurement Bins for FD	Configurable number of Frame Delay Measurement Bins per Measurement Interval. The minimum number of FD Measurement Bins per Measurement Interval supported is 2. The maximum number of FD Measurement Bins per Measurement Interval supported is 10. The default number of FD Measurement Bins per Measurement Interval supported is 3.
Measurement Bins for IFDV	Configurable number of Inter-Frame Delay Variation Measurement Bins per Measurement Interval. The minimum number of FD Measurement Bins per Measurement Interval supported is 2. The maximum number of FD Measurement Bins per Measurement Interval supported is 10. The default number of FD Measurement Bins per Measurement Interval supported is 2.
Measurement Threshold	Configurable the Measurement Threshold for each Measurement Bin. The unit for a measurement threshold is in microseconds (us). The default configured measurement threshold for a Measurement Bin is an increment of 5000 us.

Delay Measurement Bins for FD

A Measurement Bin is a counter that stores the number of delay measurements falling within a specified range, during a Measurement Interval.

If the measurement threshold is 5000 us and the total number of Measurement Bins is four, we can give an example as follows.

Bin	Threshold	Range
bin0	0 us	0 us <= measurement < 5,000 us
bin1	5,000 us	5,000 us <= measurement < 10,000 us
bin2	10,000 us	10,000 us <= measurement < 15,000 us
bin3	15,000 us	15,000 us <= measurement < infinite us

Delay Measurement Bins for IFDV

A Measurement Bin is a counter that stores the number of delay measurements falling within a specified range, during a Measurement Interval.

If the measurement threshold is 5000 us and the total number of Measurement Bins is four, we can give an example as follows.

Bin	Threshold	Range
bin0	0 us	0 us <= measurement < 5,000 us
bin1	5,000 us	5,000 us <= measurement < 10,000 us
bin2	10,000 us	10,000 us <= measurement < 15,000 us
bin3	15,000 us	15,000 us <= measurement < infinite us

6.9. ERPS

6.9.1.1 ERPS Configuration

WEB MENU Configuration > ERPS

The ERPS instances are configured here.

Ethernet Ring Protection Switching

Delete	ERPS ID	Port 0	Port 1	Port 0 APS MEP	Port 1 APS MEP	Port 0 SF MEP	Port 1 SF MEP	Ring Type	Interconnected Node	Virtual Channel	Major Ring ID	Alarm
--------	---------	--------	--------	----------------	----------------	---------------	---------------	-----------	---------------------	-----------------	---------------	-------

Ethernet Ring Protection Switching

Object	Description
Delete	This box is used to mark an ERPS for deletion in next Save operation.
ERPS ID	The ID of the created Protection group, It must be an integer value between 1 and 64. The maximum number of ERPS Protection Groups that can be created are 64. Click on the ID of an Protection group to enter the configuration page.
Port 0	This will create a Port 0 of the switch in the ring.
Port 1	This will create "Port 1" of the switch in the Ring. As interconnected sub-ring will have only one ring port, "Port 1" is configured as "0" for interconnected sub-ring. "0" in this field indicates that no "Port 1" is associated with this instance
Port 0 SF MEP	The Port 0 Signal Fail reporting MEP.
Port 1 SF MEP	The Port 1 Signal Fail reporting MEP. As only one SF MEP is associated with interconnected sub-ring without virtual channel, it is configured as "0" for such ring instances. "0" in this field indicates that no Port 1 SF MEP is associated with this instance.
Port 0 APS MEP	The Port 0 APS PDU handling MEP.
Port 1 APS MEP	The Port 1 APS PDU handling MEP. As only one APS MEP is associated with interconnected sub-ring without virtual channel, it is configured as "0" for such ring instances. "0" in this field indicates that no Port 1 APS MEP is associated with this instance.
Ring Type	Type of Protecting ring. It can be either major ring or sub-ring.
Interconnected Node	Interconnected Node indicates that the ring instance is interconnected. Click on the checkbox to configure this. "Yes" indicates it is an interconnected node for this instance. "No" indicates that the configured instance is not interconnected.
Virtual Channel	Sub-rings can either have virtual channel or not on the interconnected node. This is configured using "Virtual Channel" checkbox. "Yes" indicates it is a sub-ring with virtual channel. "No" indicates, sub-ring doesn't have virtual channel.
Major Ring ID	Major ring group ID for the interconnected sub-ring. It is used to send topology change updates on major ring. If ring is major, this value is same as the protection group ID of this ring.
Alarm	There is an active alarm on the ERPS.

Buttons

Add New Protection Group : Click to add a new Protection group entry.

Refresh : Click to refresh the page immediately.

Apply : Click to apply changes.

Apply&Save : Click to apply and save changes.

Reset : Click to undo any changes made locally and revert to previously saved values.

ERPS Configuration 1

This page allows the user to inspect and configure the current ERPS Instance.

ERPS Configuration 1

Auto-refresh **Refresh**

Instance Data

Pending	OK	OK	NR BPR0			0	●	●	Blocked	Unblocked	●

ERPS Configuration 1

Instance Data

Object	Description
ERPS ID	The ID of the Protection group
Port 0	See help on ERPS create WEB.
Port 1	See help on ERPS create WEB.
Port 0 SF MEP	See help on ERPS create WEB.
Port 1 SF MEP	See help on ERPS create WEB.
Port 0 APS MEP	See help on ERPS create WEB.
Port 1 APS MEP	See help on ERPS create WEB.
Ring Type	Type of Protecting ring. It can be either major ring or sub-ring.

Instance Configuration

Object	Description
Configured	Red: This ERPS is only created and has not yet been configured - is not active. Green: This ERPS is configured - is active.

Guard Time	Guard timeout value to be used to prevent ring nodes from receiving outdated R-APS messages. The period of the guard timer can be configured in 10 ms steps between 10 ms and 2 seconds, with a default value of 500 ms
WTR Time	The Wait To Restore timing value to be used in revertive switching. The period of the WTR time can be configured by the operator in 1 minute steps between 5 and 12 minutes with a default value of 5 minutes.
Hold Off Time	The timing value to be used to make persistent check on Signal Fail before switching. The range of the hold off timer is 0 to 10 seconds in steps of 100 ms
Version	ERPS Protocol Version - v1 or v2
Revertive	In Revertive mode, after the conditions causing a protection switch has cleared, the traffic channel is restored to the working transport entity, i.e., blocked on the RPL. In Non-Revertive mode, the traffic channel continues to use the RPL, if it is not failed, after a protection switch condition has cleared.
VLAN config	VLAN configuration of the Protection Group. Click on the "VLAN Config" link to configure VLANs for this protection group.

RPL Configuration

Object	Description
RPL Role	It can be either RPL owner or RPL Neighbor.
RPL Port	This allows to select the east port or west port as the RPL block.
Clear	If the owner has to be changed, then the clear check box allows to clear the RPL owner for that ERPS ring.

Sub-Ring Configuration

Object	Description
Topology Change	Clicking this checkbox indicates that the topology changes in the sub-ring are propagated in the major ring.

Instance Command

Object	Description
Command	Administrative command. A port can be administratively configured to be in either manual switch or forced switch state.
Forced Switch	Forced Switch command forces a block on the ring port where the command is issued.
Manual Switch	In the absence of a failure or FS, Manual Switch command forces a block on the ring port where the command is issued.
Clear	The Clear command is used for clearing an active local administrative command (e.g., Forced Switch or Manual Switch).
Port	Port selection - Port0 or Port1 of the protection Group on which the command is applied.

Instance State

Object	Description
Protection State	ERPS state according to State Transition Tables in G.8032.
Port 0	OK: State of East port is ok SF: State of East port is Signal Fail

Port 1	OK: State of West port is ok SF: State of West port is Signal Fail
Transmit APS	The transmitted APS according to State Transition Tables in G.8032.
Port 0 Receive APS	The received APS on Port 0 according to State Transition Tables in G.8032.
Port 1 Receive APS	The received APS on Port 1 according to State Transition Tables in G.8032.
WTR Remaining	Remaining WTR timeout in milliseconds.
RPL Un-blocked	APS is received on the working flow.
No APS Received	RAPS PDU is not received from the other end.
Port 0 Block Status	Block status for Port 0 (Both traffic and R-APS block status). R-APS channel is never blocked on sub-rings without virtual channel.
Port 1 Block Status	Block status for Port 1 (Both traffic and R-APS block status). R-APS channel is never blocked on sub-rings without virtual channel.
FOP Alarm	Failure of Protocol Defect(FOP) status. If FOP is detected, red LED glows; else green LED glows.

Buttons

: Click to refresh the page immediately.

Auto-refresh : Check this box to refresh the page automatically. Automatic refresh every 3 seconds.

: Click to apply changes.

: Click to apply and save changes.

: Click to undo any changes made locally and revert to previously saved values.

ERPS VLAN Configuration n

ERPS VLAN Configuration 1

ERPS VLAN Configuration n

Object	Description
Delete	To delete a VLAN entry, check this box. The entry will be deleted during the next Save.
VLAN ID	Indicates the ID of this particular VLAN.
Adding a New VLAN	Click <input type="button" value="Add New Entry"/> to add a new VLAN ID. Legal values for a VLAN ID are 1 through 4095. The VLAN is enabled when you click on "Save". A VLAN without any port members will be deleted when you click "Save". The <input type="button" value="Delete"/> button can be used to undo the addition of new VLANs.

Buttons

: Click to apply changes.

: Click to apply and save changes.

: Click to undo any changes made locally and revert to previously saved values.

: Click to go back to this MEP instance main page.

: Refreshes the displayed table starting from the "VLAN ID" input fields.

6.10. S-RING

6.10.1. S-Ring Configuration

WEB MENU Configuration>S-Ring

S-Ring is a protocol within the Ring Protocol that manages the Ring by determining whether packets transmitted from the 2nd Port of the Master node are received by the 1st Port.

If packets are received during the configured time, it keeps the 1st Port in a Blocking state.

This page is used to configure the S-Ring group and is available when there are three or more devices that support S-Ring.

Sring Configuration & Status

Sring Configuration						
ID	Mode	Status	Alarm	1st Port	2nd Port	Robustness
1	Disable ▾	-	●	12 ▾	11 ▾	2 ▾
2	Disable ▾	-	●	10 ▾	9 ▾	2 ▾

S-Ring Configuration & Status

Object	Description
Ring ID	Ring ID. Each device can configure up to four rings
Mode	Use or nonuse of s-ring, Show S-ring mode. Disabled: Nonuse of S-ring. Slave: Set Slave mode of S-ring. Master: Set Master mode of S-ring.
Status	Displays the status of the S-ring. (-): The S-Ring is not configured. Failover: A state in which packet sent from the 2nd port are not received by the 1st port. Ring: A state in which the packet sent from the 2nd port is received by the 1st port.
Alarm	Show the status of S-ring using pictures. ● : Disable ● : Failover state ● : Ring state
1st Port	Set a port to configure S-ring. (S-Ring #1 port)
2nd Port	Set a port to configure S-ring. (S-Ring #2 port)
Robustness Value	Robustness indicates a time of 10ms per setting value of 1, and if the packet is not received during the set time, the [Ring] status changes to [Failover]. Mainly increase the value when communication is unstable. If this value is high, the node hang time increases when changing from [Ring] to [Failover].

Buttons

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

Refresh: Click to refresh the page.

6.11. MAC TABLE

6.11.1. MAC Table Configuration

WEB MENU Configuration > MAC Table

The MAC Address Table is configured on this page.

Set timeouts for entries in the dynamic MAC Table and configure the static MAC table here.

MAC Address Table Configuration

Aging Configuration

Disable Automatic Aging	<input type="checkbox"/>
Aging Time	<input type="text" value="300"/> seconds

MAC Table Learning

	Port Members							
	1	2	3	4	5	6	7	8
Auto	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>
Disable	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Secure	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Static MAC Table Configuration

Delete	VLAN ID	MAC Address	Port Members														
			1	2	3	4	5	6	7	8							

Aging Configuration

By default, dynamic entries are removed from the MAC table after 300 seconds. This removal is also called aging.

Configure aging time by entering a value here in seconds; for example, **Age time** seconds.

The allowed range is 10 to 1000000 seconds.

Disable the automatic aging of dynamic entries by checking **Disable automatic aging**.

MAC Table Learning

If the learning mode for a given port is greyed out, another module is in control of the mode, so that it cannot be changed by the user. An example of such a module is the MAC-Based Authentication under 802.1X.

Each port can do learning based upon the following settings.

Object	Description
Auto	Learning is done automatically as soon as a frame with unknown SMAC is received.
Disable	No learning is done.
Secure	Only static MAC entries are learned, all other frames are dropped. Note: Make sure that the link used for managing the switch is added to the Static Mac Table before changing to secure learning mode, otherwise the management link is lost and can only be restored by using another non-secure port or by connecting to the switch via the serial interface.

Static MAC Table Configuration

The static entries in the MAC table are shown in this table. The static MAC table can contain 64 entries.

The MAC table is sorted first by VLAN ID and then by MAC address.

Object	Description
Delete	Check to delete the entry. It will be deleted during the next save.
VLAN ID	The VLAN ID of the entry.
MAC Address	The MAC address of the entry.
Port Members	Checkmarks indicate which ports are members of the entry. Check or uncheck as needed to modify the entry.

Buttons

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

Add New Static Entry: Click to add a new entry to the static MAC table. Specify the VLAN ID, MAC address, and port members for the new entry. Click "Save".

➤ Add New Static Entry

```
(config)# mac address-table static <v_mac_addr> vlan <v_vlan_id> [ interface
( <port_type> [ <v_port_type_list> ] ) ]
(config)# mac address-table static 00-21-6d-00-00-01 vlan 1 interface GigabitEthernet 1/3
```

6.11.2. MAC Table Monitor

WEB MENU Monitor>MAC Table

Entries in the MAC Table are shown on this page. The MAC Table contains up to 8192 entries, and is sorted first by VLAN ID, then by MAC address.

MAC Address Table

Start from VLAN and MAC address with entries per page.

Type	VLAN	MAC Address	Port Members							
			CPU	1	2	3	4	5	6	7

MAC Table Columns

Object	Description
Type	Indicates whether the entry is a static or a dynamic entry.
MAC address	The MAC address of the entry.
VLAN	The VLAN ID of the entry.
Port Members	The ports that are members of the entry.

Buttons

Auto-refresh : Automatic refresh occurs every 3 seconds.

: Refreshes the displayed table starting from the "Start from MAC address" and "VLAN" input fields.

: Flushes all dynamic entries..

: Updates the table starting from the first entry in the MAC Table, i.e. the entry with the lowest VLAN ID and MAC address.

: Updates the table, starting with the entry after the last entry currently displayed.

6.12. VLANS

6.12.1. VLAN Configuration

WEB MENU Configuration>VLANs

This page allows for controlling VLAN configuration on the switch.

The page is divided into a global section and a per-port configuration section.

Global VLAN Configuration

Allowed Access VLANs	1
Ethertype for Custom S-ports	88A8

Port VLAN Configuration

Port	Mode	Port VLAN	Port Type	Ingress Filtering	Ingress Acceptance	Egress Tagging	Allowed VLANs	Forbidden VLANs
*	<>	1	<>	<input checked="" type="checkbox"/>	<>	<>	1	
1	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag All	1	
2	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag All	1	
3	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag All	1	
4	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag All	1	
5	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag All	1	
6	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag All	1	
7	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag All	1	
8	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag All	1	

Global VLAN Configuration

Object	Description
Allowed Access VLANs	This field shows the allowed Access VLANs, i.e. it only affects ports configured as Access ports. Ports in other modes are members of the VLANs specified in the Allowed VLANs field. By default, only VLAN 1 is enabled. More VLANs may be created by using a list syntax where the individual elements are separated by commas. Ranges are specified with a dash(-) separating the lower and upper bound. The following example will create VLANs 1, 10, 11, 12, 13, 200, and 300: 1,10-13,200,300. Spaces are allowed in between the delimiters.
Ethertype for Custom S-ports	This field specifies the ethertype/TPID (specified in hexadecimal) used for Custom S-ports. The setting is in force for all ports whose Port Type is set to S-Custom-Port.

Port VLAN Configuration

Object	Description
Port	This is the logical port number of this row.
Mode	<p>The port mode (default is Access) determines the fundamental behavior of the port in question. A port can be in one of three modes as described below.</p> <p>Whenever a particular mode is selected, the remaining fields in that row will be either grayed out or made changeable depending on the mode in question.</p> <p>Grayed out fields show the value that the port will get when the mode is applied.</p> <p>Access</p> <p>Access ports are normally used to connect to end stations. Dynamic features like Voice VLAN may add the port to more VLANs behind the scenes.</p> <p>Access ports have the following characteristics:</p> <ol style="list-style-type: none"> 1. Member of exactly one VLAN, the Port VLAN (a.k.a. Access VLAN), which by default is 1 2. Accepts untagged and C-tagged frames

	<p>3. Discards all frames not classified to the Access VLAN 4. On egress all frames are transmitted untagged</p> <hr/> <p>Trunk ports can carry traffic on multiple VLANs simultaneously, and are normally used to connect to other switches. Trunk ports have the following characteristics:</p> <ol style="list-style-type: none"> 1. By default, a trunk port is member of all VLANs (1-4095). 2. The VLANs that a trunk port is member of may be limited by the use of Allowed VLANs. <p>Trunk</p> <ol style="list-style-type: none"> 3. Frames classified to a VLAN that the port is not a member of are discarded 4. By default, all frames but frames classified to the Port VLAN (a.k.a. Native VLAN) get tagged on egress. Frames classified to the Port VLAN do not get C-tagged on egress 5. Egress tagging can be changed to tag all frames, in which case only tagged frames are accepted on ingress <hr/> <p>Hybrid ports resemble trunk ports in many ways, but adds additional port configuration features. In addition to the characteristics described for trunk ports, hybrid ports have these abilities:</p> <p>Hybrid</p> <ol style="list-style-type: none"> 1. Can be configured to be VLAN tag unaware, C-tag aware, S-tag aware, or S-custom-tag aware 2. Ingress filtering can be controlled 3. Ingress acceptance of frames and configuration of egress tagging can be configured independently
Port VLAN	<p>Determines the port's VLAN ID (a.k.a. PVID). Allowed VLANs are in the range 1 through 4095, default being 1.</p> <p>On ingress, frames get classified to the Port VLAN if the port is configured as VLAN unaware, the frame is untagged, or VLAN awareness is enabled on the port, but the frame is priority tagged (VLAN ID = 0).</p> <p>On egress, frames classified to the Port VLAN do not get tagged if Egress Tagging configuration is set to untag Port VLAN.</p> <p>The Port VLAN is called an "Access VLAN" for ports in Access mode and Native VLAN for ports in Trunk or Hybrid mode.</p>
Port Type	<p>Ports in hybrid mode allow for changing the port type, that is, whether a frame's VLAN tag is used to classify the frame on ingress to a particular VLAN, and if so, which TPID it reacts on. Likewise, on egress, the Port Type determines the TPID of the tag, if a tag is required.</p> <p>Unaware:</p> <p>On ingress, all frames, whether carrying a VLAN tag or not, get classified to the Port VLAN, and possible tags are not removed on egress.</p> <p>C-Port:</p> <p>On ingress, frames with a VLAN tag with TPID = 0x8100 get classified to the VLAN ID embedded in the tag.</p> <p>If a frame is untagged or priority tagged, the frame gets classified to the Port VLAN.</p> <p>If frames must be tagged on egress, they will be tagged with a C-tag.</p> <p>S-Port:</p> <p>On egress, if frames must be tagged, they will be tagged with an S-tag.</p> <p>On ingress, frames with a VLAN tag with TPID = 0x88A8 get classified to the VLAN ID embedded in the tag.</p> <p>Priority-tagged frames are classified to the Port VLAN.</p>

	<p>If the port is configured to accept Tagged Only frames (see Ingress Acceptance below), frames without this TPID are dropped.</p> <p>S-Custom-Port: On egress, if frames must be tagged, they will be tagged with the custom S-tag. On ingress, frames with a VLAN tag with a TPID equal to the Ethertype configured for Custom-S ports get classified to the VLAN ID embedded in the tag. Priority-tagged frames are classified to the Port VLAN. If the port is configured to accept Tagged Only frames (see Ingress Acceptance below), frames without this TPID are dropped.</p>						
Ingress Filtering	<p>Hybrid ports allow for changing ingress filtering. Access and Trunk ports always have ingress filtering enabled.</p> <p>If ingress filtering is enabled (checkbox is checked), frames classified to a VLAN that the port is not a member of get discarded.</p> <p>If ingress filtering is disabled, frames classified to a VLAN that the port is not a member of are accepted and forwarded to the switch engine. However, the port will never transmit frames classified to VLANs that it is not a member of.</p>						
Ingress Acceptance	<p>Hybrid ports allow for changing the type of frames that are accepted on ingress.</p> <table border="1"> <tr> <td>Tagged and Untagged</td> <td>Both tagged and untagged frames are accepted. See Port Type for a description of when a frame is considered tagged.</td> </tr> <tr> <td>Tagged Only</td> <td>Only frames tagged with the corresponding Port Type tag are accepted on ingress.</td> </tr> <tr> <td>Untagged Only</td> <td>Only untagged frames are accepted on ingress. See Port Type for a description of when a frame is considered untagged.</td> </tr> </table>	Tagged and Untagged	Both tagged and untagged frames are accepted. See Port Type for a description of when a frame is considered tagged.	Tagged Only	Only frames tagged with the corresponding Port Type tag are accepted on ingress.	Untagged Only	Only untagged frames are accepted on ingress. See Port Type for a description of when a frame is considered untagged.
Tagged and Untagged	Both tagged and untagged frames are accepted. See Port Type for a description of when a frame is considered tagged.						
Tagged Only	Only frames tagged with the corresponding Port Type tag are accepted on ingress.						
Untagged Only	Only untagged frames are accepted on ingress. See Port Type for a description of when a frame is considered untagged.						
Egress Tagging	<p>Ports in Trunk and Hybrid mode may control the tagging of frames on egress.</p> <table border="1"> <tr> <td>Untag Port VLAN</td> <td>Frames classified to the Port VLAN are transmitted untagged. Other frames are transmitted with the relevant tag.</td> </tr> <tr> <td>Tag All</td> <td>All frames, whether classified to the Port VLAN or not, are transmitted with a tag.</td> </tr> <tr> <td>Untag All</td> <td>All frames, whether classified to the Port VLAN or not, are transmitted without a tag. This option is only available for ports in Hybrid mode.</td> </tr> </table>	Untag Port VLAN	Frames classified to the Port VLAN are transmitted untagged. Other frames are transmitted with the relevant tag.	Tag All	All frames, whether classified to the Port VLAN or not, are transmitted with a tag.	Untag All	All frames, whether classified to the Port VLAN or not, are transmitted without a tag. This option is only available for ports in Hybrid mode.
Untag Port VLAN	Frames classified to the Port VLAN are transmitted untagged. Other frames are transmitted with the relevant tag.						
Tag All	All frames, whether classified to the Port VLAN or not, are transmitted with a tag.						
Untag All	All frames, whether classified to the Port VLAN or not, are transmitted without a tag. This option is only available for ports in Hybrid mode.						
Allowed VLANs	<p>Ports in Trunk and Hybrid mode may control which VLANs they are allowed to become members of. Access ports can only be member of one VLAN, the Access VLAN. The field's syntax is identical to the syntax used in the Enabled VLANs field. By default, a Trunk or Hybrid port will become member of all VLANs, and is therefore set to 1-4095. The field may be left empty, which means that the port will not become member of any VLANs.</p>						
Forbidden VLANs	<p>A port may be configured to never become member of one or more VLANs. This is particularly useful when dynamic VLAN protocols like MVRP and GVRP must be prevented from dynamically adding ports to VLANs.</p> <p>The trick is to mark such VLANs as forbidden on the port in question. The syntax is identical to the syntax used in the Enabled VLANs field.</p> <p>By default, the field is left blank, which means that the port may become a member of all possible VLANs.</p>						

Buttons

: Click to apply changes.

: Click to apply and save changes.

: Click to undo any changes made locally and revert to previously saved values.

6.12.2. VLAN Monitor

6.12.2.1. Membership

WEB MENU Monitor>VLANs>Membership

This page provides an overview of membership status of VLAN users.

VLAN Membership Status for Combined users

Start from VLAN with entries per page.

VLAN ID	Port Members							
	1	2	3	4	5	6	7	8
1	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

VLAN Membership Status for Combined users

Object	Description
VLAN User	Various internal software modules may use VLAN services to configure VLAN memberships on the fly. The drop-down list on the right allows for selecting between showing VLAN memberships as configured by an administrator (Admin) or as configured by one of these internal software modules. The "Combined" entry will show a combination of the administrator and internal software modules configuration, and basically reflects what is actually configured in hardware.
VLAN ID	VLAN ID for which the Port members are displayed.
Port Members	A row of check boxes for each port is displayed for each VLAN ID. If a port is included in a VLAN, the following image will be displayed: <input checked="" type="checkbox"/> If a port is in the forbidden port list, the following image will be displayed: <input checked="" type="checkbox"/> If a port is in the forbidden port list and at the same time attempted included in the VLAN, the following image will be displayed: <input checked="" type="checkbox"/> . The port will not be a member of the VLAN in this case.

Buttons

Auto-refresh : Check this box to refresh the page automatically. Automatic refresh occurs every 3 seconds.

: Click to refresh the page immediately.

: Use the button to start over.

: The button will use the last entry of the currently displayed VLAN entry as a basis for the next lookup.

: Select VLAN Users from this drop down list.

6.12.2.2. Ports

WEB MENU Monitor>VLANs>Ports

This page provides VLAN Port Status.

VLAN Port Status for Combined users

Port	Port Type	Ingress Filtering	Frame Type	Port VLAN ID	Tx Tag	Untagged VLAN ID	Conflicts
1	C-Port	<input checked="" type="checkbox"/>	All	1	Untag All		No
2	C-Port	<input checked="" type="checkbox"/>	All	1	Untag All		No
3	C-Port	<input checked="" type="checkbox"/>	All	1	Untag All		No
4	C-Port	<input checked="" type="checkbox"/>	All	1	Untag All		No
5	C-Port	<input checked="" type="checkbox"/>	All	1	Untag All		No
6	C-Port	<input checked="" type="checkbox"/>	All	1	Untag All		No
7	C-Port	<input checked="" type="checkbox"/>	All	1	Untag All		No
8	C-Port	<input checked="" type="checkbox"/>	All	1	Untag All		No

VLAN Port Status for Combined users

Object	Description
VLAN User	<p>Various internal software modules may use VLAN services to configure VLAN port configuration on the fly.</p> <p>The drop-down list on the right allows for selecting between showing VLAN memberships as configured by an administrator (Admin) or as configured by one of these internal software modules.</p> <p>The "Combined" entry will show a combination of the administrator and internal software modules configuration, and basically reflects what is actually configured in hardware.</p> <p>If a given software modules hasn't overridden any of the port settings, the text "No data exists for the selected user" is shown in the table.</p>
Port	The logical port for the settings contained in the same row.
Port Type	<p>Shows the port type (Unaware, C-Port, S-Port, S-Custom-Port.) that a given user wants to configure on the port.</p> <p>The field is empty if not overridden by the selected user.</p>
Ingress Filtering	<p>Shows whether a given user wants ingress filtering enabled or not.</p> <p>The field is empty if not overridden by the selected user.</p>
Frame Type	<p>Shows the acceptable frame types (All, Taged, Untagged) that a given user wants to configure on the port.</p> <p>The field is empty if not overridden by the selected user.</p>
Port VLAN ID	<p>Shows the Port VLAN ID (PVID) that a given user wants the port to have.</p> <p>The field is empty if not overridden by the selected user.</p>
Tx Tag	<p>Shows the Tx Tag requirements (Tag All, Tag PVID, Tag UVID, Untag All, Untag PVID, Untag UVID) that a given user has on a port.</p> <p>The field is empty if not overridden by the selected user.</p>
Untagged VLAN ID	<p>If Tx Tag is overridden by the selected user and is set to Tag or Untag UVID, then this field will show the VLAN ID the user wants to tag or untag on egress.</p> <p>The field is empty if not overridden by the selected user.</p>
Conflicts	Two users may have conflicting requirements to a port's configuration. For instance, one user may require all frames to be tagged on egress while another requires all frames to be untagged on egress.

Since both users cannot win, this gives rise to a conflict, which is solved in a prioritized way. The Administrator has the least priority. Other software modules are prioritized according to their position in the drop-down list: The higher in the list, the higher priority. If conflicts exist, it will be displayed as "Yes" for the "Combined" user and the offending software module.

The "Combined" user reflects what is actually configured in hardware.

QoS Ingress Port Classification

Object	Description
Port	The port number for which the configuration below applies.
CoS	<p>Controls the default class of service.</p> <p>All frames are classified to a CoS. There is a one to one mapping between CoS, queue and priority. A CoS of 0 (zero) has the lowest priority.</p> <p>If the port is VLAN aware, the frame is tagged and Tag Class. is enabled, then the frame is classified to a CoS that is mapped from the PCP and DEI value in the tag. Otherwise the frame is classified to the default CoS.</p> <p>The classified CoS can be overruled by a QCL entry.</p> <p>Note: If the default CoS has been dynamically changed, then the actual default CoS is shown in parentheses after the configured default CoS.</p>
DPL	<p>Controls the default drop precedence level.</p> <p>All frames are classified to a drop precedence level.</p> <p>If the port is VLAN aware, the frame is tagged and Tag Class. is enabled, then the frame is classified to a DPL that is mapped from the PCP and DEI value in the tag. Otherwise the frame is classified to the default DPL.</p> <p>The classified DPL can be overruled by a QCL entry.</p>
PCP	<p>Controls the default PCP value.</p> <p>All frames are classified to a PCP value.</p> <p>If the port is VLAN aware and the frame is tagged, then the frame is classified to the PCP value in the tag. Otherwise the frame is classified to the default PCP value.</p>
DEI	<p>Controls the default DEI value.</p> <p>All frames are classified to a DEI value.</p> <p>If the port is VLAN aware and the frame is tagged, then the frame is classified to the DEI value in the tag. Otherwise the frame is classified to the default DEI value.</p>
Tag Class	Shows the classification mode for tagged frames on this port.

	<p>Disabled: Use default CoS and DPL for tagged frames.</p> <p>Enabled: Use mapped versions of PCP and DEI for tagged frames.</p> <p>Click on the mode in order to configure the mode and/or mapping.</p> <p>Note: This setting has no effect if the port is VLAN unaware. Tagged frames received on VLAN unaware ports are always classified to the default CoS and DPL.</p>
DSCP Based	Click to Enable DSCP Based QoS Ingress Port Classification.
WRED Group	Controls the WRED group membership.

6	<input type="checkbox"/>	500	kbps	<input type="checkbox"/>
7	<input type="checkbox"/>	500	kbps	<input type="checkbox"/>
8	<input type="checkbox"/>	500	kbps	<input type="checkbox"/>

QoS Ingress Port Policers

Object	Description
Port	The port number for which the configuration below applies.
Enable	Enable or disable the port policer for this switch port.
Rate	Controls the rate for the port policer. This value is restricted to 10-13128147 when "Unit" is kbps or fps, and 1-13128 when "Unit" is Mbps or kfps. The rate is internally rounded up to the nearest value supported by the port policer.
Unit	Controls the unit of measure for the port policer rate as kbps, Mbps, fps or kfps.
Flow Control	If flow control is enabled and the port is in flow control mode, then pause frames are sent instead of discarding frames.

QoS Ingress Queue Policers

Object	Description
Port	The port number for which the configuration below applies.
Enable (E)	Enable or disable the queue policer for this switch port.
Rate	Controls the rate for the queue policer. This value is restricted to 25-13128147 when "Unit" is kbps, and 1-13128 when "Unit" is Mbps. The rate is internally rounded up to the nearest value supported by the queue policer. This field is only shown if at least one of the queue policers are enabled.
Unit	Controls the unit of measure for the queue policer rate as kbps or Mbps. This field is only shown if at least one of the queue policers are enabled.

```

6.13.1.4. Port Scheduler

WEB MENU Configuration>QoS>Port Scheduler

This page provides an overview of QoS Egress Port Schedulers for all switch ports.

QoS Egress Port Schedulers

Port	Mode	Weight							
		Q0	Q1	Q2	Q3	Q4	Q5	Q6	Q7
1	Strict Priority	-	-	-	-	-	-	-	-
2	Strict Priority	-	-	-	-	-	-	-	-
3	Strict Priority	-	-	-	-	-	-	-	-
4	Strict Priority	-	-	-	-	-	-	-	-
5	Strict Priority	-	-	-	-	-	-	-	-
6	Strict Priority	-	-	-	-	-	-	-	-
7	Strict Priority	-	-	-	-	-	-	-	-
8	Strict Priority	-	-	-	-	-	-	-	-

QoS Egress Port Schedulers

Object	Description
Port	The logical port for the settings contained in the same row. Click on the port number in order to configure the schedulers.
Mode	Shows the scheduling mode for this port.
Qn	Shows the weight for this queue and port.

QoS Egress Port Scheduler and Shapers Port n

Click a port No. to configure Scheduler.

This page allows you to configure the Scheduler and Shapers for a specific port.

QoS Egress Port Scheduler and Shapers Port 1

Scheduler Mode: Strict Priority

Queue Shaper			Port Shaper		
Enable	Rate	Unit	Enable	Rate	Unit
<input checked="" type="checkbox"/>	500	Mbps	<input type="checkbox"/>	500	kbps
<input checked="" type="checkbox"/>	500	Mbps	<input type="checkbox"/>		
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>		
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>		
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>		
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>		
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>		
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>		
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>		

The diagram illustrates the traffic flow for Port 1. On the left, eight queues (Q0 to Q7) are shown, each with a 'Queue Shaper' configuration. Queues Q7 and Q6 have their shapers enabled (checked) with a rate of 500 Mbps. Queues Q5 through Q0 have their shapers disabled (unchecked) with a rate of 500 kbps. Arrows from all queues point to a central vertical oval labeled 'STRICT', representing the scheduler. An arrow from the 'STRICT' scheduler points to a 'Port Shaper' configuration on the right, which is disabled (unchecked) with a rate of 500 kbps.

QoS Egress Port Schedulers and Shapers Port n

Object	Description
Scheduler Mode	Controls how many of the queues are scheduled as strict and how many are scheduled as weighted on this switch port.
Queue Shaper Enable	Controls whether the queue shaper is enabled for this queue on this switch port.
Queue Shaper Rate	Controls the rate for the queue shaper. This value is restricted to 100-13107100 when "Unit" is kbps, and 1-13107 when "Unit" is Mbps. The rate is internally rounded up to the nearest value supported by the queue shaper.
Queue Shaper Unit	Controls the unit of measure for the queue shaper rate as kbps or Mbps.
Queue Scheduler Weight	Controls the weight for this queue. This value is restricted to 1-100. This parameter is only shown if "Scheduler Mode" is set to "Weighted".
Queue Scheduler Percent	Shows the weight in percent for this queue. This parameter is only shown if "Scheduler Mode" is set to "Weighted".
Port Shaper Enable	Controls whether the port shaper is enabled for this switch port.
Port Shaper Rate	Controls the rate for the port shaper. This value is restricted to 100-13107100 when "Unit" is kbps, and 1-13107 when "Unit" is Mbps. The rate is internally rounded up to the nearest value supported by the port shaper.
Port Shaper Unit	Controls the unit of measure for the port shaper rate as kbps or Mbps.

5	<input checked="" type="checkbox"/>	DSCP=0 ▾	Disable ▾
6	<input checked="" type="checkbox"/>	DSCP=0 ▾	Disable ▾
7	<input checked="" type="checkbox"/>	DSCP=0 ▾	Disable ▾
8	<input checked="" type="checkbox"/>	DSCP=0 ▾	Disable ▾

QoS Port DSCP Configuration

Object	Description
Port	The Port column shows the list of ports for which you can configure DSCP ingress and egress settings.
Ingress	In Ingress settings you can change ingress translation and classification settings for individual ports. There are two configuration parameters available in Ingress: 1. Translate 2. Classify
1. Translate	To Enable the Ingress Translation click the checkbox.
2. Classify	Classification for a port have 4 different values. 1. Disable: No Ingress DSCP Classification. 2. DSCP=0: Classify if incoming (or translated if enabled) DSCP is 0. 3. Selected: Classify only selected DSCP for which classification is enabled as specified in DSCP Translation window for the specific DSCP. 4. All: Classify all DSCP.
Egress	Port Egress Rewriting can be one of - 1. Disable: No Egress rewrite. 2. Enable: Rewrite enabled without remapping. 3. Remap: DSCP from analyzer is remapped and frame is remarked with remapped DSCP value.

Buttons

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

6.13.1.8. DSCP-Based QoS

WEB MENU Configuration>QoS>DSCP-Based QoS

This page allows you to configure the basic QoS DSCP based QoS Ingress Classification settings for all switches.

DSCP-Based QoS Ingress Classification

DSCP	Trust	QoS Class	DPL
*	<input type="checkbox"/>	<>v	<>v
0 (BE)	<input type="checkbox"/>	0v	0v
1	<input type="checkbox"/>	0v	0v
2	<input type="checkbox"/>	0v	0v
3	<input type="checkbox"/>	0v	0v
4	<input type="checkbox"/>	0v	0v
		0v	0v
58	<input type="checkbox"/>	0v	0v
59	<input type="checkbox"/>	0v	0v
60	<input type="checkbox"/>	0v	0v
61	<input type="checkbox"/>	0v	0v
62	<input type="checkbox"/>	0v	0v
63	<input type="checkbox"/>	0v	0v

DSCP-Based QoS Ingress Classification

Object	Description
DSCP	Maximum number of supported DSCP values are 64.
Trust	Controls whether a specific DSCP value is trusted. Only frames with trusted DSCP values are mapped to a specific QoS class and Drop Precedence Level. Frames with untrusted DSCP values are treated as a non-IP frame.
QoS Class	QoS class value can be any of (0-7)
DPL	Drop Precedence Level (0-3)

Buttons

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

6.13.1.9. DSCP Translation

WEB MENU Configuration>QoS>DSCP Translation

This page allows you to configure the basic QoS DSCP Translation settings for all switches.

DSCP translation can be done in Ingress or Egress.

DSCP Translation

DSCP	Ingress		Egress
	Translate	Classify	Remap
*	<> ▾	<input type="checkbox"/>	<> ▾
0 (BE)	0 (BE) ▾	<input type="checkbox"/>	0 (BE) ▾

DSCP Translation

Object	Description
DSCP	Maximum number of supported DSCP values are 64 and valid DSCP value ranges from 0 to 63.
Ingress	Ingress side DSCP can be first translated to new DSCP before using the DSCP for QoS class and DPL map. There are two configuration parameters for DSCP Translation 1. Translate 2. Classify
1. Translate	DSCP at Ingress side can be translated to any of (0-63) DSCP values.
2. Classify	Click to enable Classification at Ingress side.
Egress	There is the following configurable parameter for Egress side Remap
Remap	Select the DSCP value from select menu to which you want to remap. DSCP value ranges form 0 to 63.

Buttons

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

6.13.1.10. DSCP Classification

WEB MENU Configuration>QoS>DSCP Classification

This page allows you to configure the mapping of QoS class and Drop Precedence Level to DSCP value.

DSCP Classification

QoS Class	DSCP DP0	DSCP DP1	DSCP DP2	DSCP DP3
*	<> ▾	<> ▾	<> ▾	<> ▾
0	0 (BE) ▾	0 (BE) ▾	0 (BE) ▾	0 (BE) ▾

DSCP Classification

Object	Description
QoS Class	Actual QoS class.
DSCP DP0	Select the classified DSCP value (0-63) for Drop Precedence Level 0.
DSCP DP1	Select the classified DSCP value (0-63) for Drop Precedence Level 1.
DSCP DP2	Select the classified DSCP value (0-63) for Drop Precedence Level 2.
DSCP DP3	Select the classified DSCP value (0-63) for Drop Precedence Level 3.

Buttons

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

6.13.1.11. QoS Control List

WEB MENU Configuration>QoS>QoS Control List

This page shows the QoS Control List(QCL), which is made up of the QCEs.

Each row describes a QCE that is defined. The maximum number of QCEs is 256 on each switch.

Click on the lowest plus sign to add a new QCE to the list.

QoS Control List Configuration

QCE	Port	DMAC	SMAC	Tag Type	VID	PCP	DEI	Frame Type	Action					
									CoS	DPL	DSCP	PCP	DEI	Policy
+														

QoS Control List Configuration

Object	Description
QCE	Indicates the QCE id.
Port	Indicates the list of ports configured with the QCE or 'Any'.
DMAC	Indicates the destination MAC address. Possible values are: Any: Match any DMAC. Unicast: Match unicast DMAC. Multicast: Match multicast DMAC. Broadcast: Match broadcast DMAC. <MAC>: Match specific DMAC. The default value is 'Any'.
SMAC	Match specific source MAC address or 'Any'.
Tag Type	Indicates tag type. Possible values are: Any: Match tagged and untagged frames. Untagged: Match untagged frames. Tagged: Match tagged frames. C-Tagged: Match C-tagged frames. S-Tagged: Match S-tagged frames. The default value is 'Any'.
VID	Indicates (VLAN ID), either a specific VID or range of VIDs. VID can be in the range 1-4095 or 'Any'
PCP	Priority Code Point: Valid values of PCP are specific(0, 1, 2, 3, 4, 5, 6, 7) or range(0-1, 2-3, 4-5, 6-7, 0-3, 4-7) or 'Any'.
DEI	Drop Eligible Indicator: Valid value of DEI are 0, 1 or 'Any'.
Frame Type	Indicates the type of frame. Possible values are: Any: Match any frame type. Ethernet: Match EtherType frames. LLC: Match (LLC) frames. SNAP: Match (SNAP) frames. IPv4: Match IPv4 frames. IPv6: Match IPv6 frames.
Action	Indicates the classification action taken on ingress frame if parameters configured are matched with the frame's content. Possible actions are:

	<p>CoS: Classify Class of Service. DPL: Classify Drop Precedence Level. DSCP: Classify DSCP value. PCP: Classify PCP value. DEI: Classify DEI value. Policy: Classify ACL Policy number.</p>
Modification Buttons	<p>You can modify each QCE (QoS Control Entry) in the table using the following buttons:</p> <p>: Inserts a new QCE before the current row. : Edits the QCE. : Moves the QCE up the list. : Moves the QCE down the list. : Deletes the QCE. : The lowest plus sign adds a new entry at the bottom of the QCE listings.</p>

QCE Configuration

This page allows to edit | insert a single QoS Control Entry at a time. A QCE consists of several parameters. These parameters vary according to the frame type that you select.

QCE Configuration

QCE Configuration

Object	Description
Port Members	Check the checkbox button to include the port in the QCL entry. By default all ports are included.
Key Parameters	<p>Key configuration is described as below:</p> <p>DMAC Destination MAC address: Possible values are 'Unicast', 'Multicast', 'Broadcast', 'Specific' (xx-xx-xx-xx-xx-xx) or 'Any'.</p> <hr/> <p>SMAC Source MAC address: xx-xx-xx-xx-xx-xx or 'Any'.</p> <hr/> <p>Tag Value of Tag field can be 'Untagged', 'Tagged', 'C-Tagged', 'S-Tagged' or 'Any'.</p> <hr/> <p>VID Valid value of VLAN ID can be any value in the range 1-4095 or 'Any'; user can enter either a specific value or a range of VIDs.</p> <hr/> <p>PCP Valid value PCP are specific (0, 1, 2, 3, 4, 5, 6, 7) or range (0-1, 2-3, 4-5, 6-7, 0-3, 4-7) or 'Any'.</p> <hr/> <p>DEI Valid value of DEI can be '0', '1' or 'Any'.</p>

	<p>Inner Tag Value of Inner Tag field can be 'Untagged', 'Tagged', 'C-Tagged', 'S-Tagged' or 'Any'.</p> <hr/> <p>Inner VID Valid value of Inner VLAN ID can be any value in the range 1-4095 or 'Any'; user can enter either a specific value or a range of VIDs.</p> <hr/> <p>Inner PCP Valid value of Inner PCP are specific (0, 1, 2, 3, 4, 5, 6, 7) or range (0-1, 2-3, 4-5, 6-7, 0-3, 4-7) or 'Any'.</p> <hr/> <p>Inner DEI Valid value of Inner DEI can be '0', '1' or 'Any'.</p> <hr/> <p>Frame Type Frame Type can have any of the following values: 1.Any, 2.EtherType, 3.LLC, 4.SNAP, 5.IPv4, 6.IPv6</p>
1. Any	Allow all types of frames.
2. EtherType	<p>Ether Type Valid Ether Type can be 0x600-0xFFFF excluding 0x800(IPv4) and 0x86DD(IPv6) or 'Any'.</p>
3. LLC	<p>DSAP Address Valid DSAP(Destination Service Access Point) can vary from 0x00 to 0xFF or 'Any'.</p> <hr/> <p>SSAP Address Valid SSAP(Source Service Access Point) can vary from 0x00 to 0xFF or 'Any'.</p> <hr/> <p>Control Valid Control field can vary from 0x00 to 0xFF or 'Any'.</p>
4. SNAP	<p>PID Valid PID(a.k.a Ether Type) can be 0x0000-0xFFFF or 'Any'.</p>
5. IPv4	<p>Protocol IP protocol number: (0-255, 'TCP' or 'UDP') or 'Any'.</p> <hr/> <p>Source IP Specific Source IP address in value/mask format or 'Any'. IP and Mask are in the format x.y.z.w where x, y, z, and w are decimal numbers between 0 and 255. When Mask is converted to a 32-bit binary string and read from left to right, all bits following the first zero must also be zero.</p> <hr/> <p>Destination IP Specific Destination IP address in value/mask format or 'Any'.</p> <hr/> <p>IP Fragment IPv4 frame fragmented option: 'Yes', 'No' or 'Any'.</p> <hr/> <p>DSCP Diffserv Code Point value (DSCP): It can be a specific value, range of values or 'Any'. DSCP values are in the range 0-63 including BE, CS1-CS7, EF or AF11-AF43.</p> <hr/> <p>Sport Source TCP/UDP port:(0-65535) or 'Any', specific or port range applicable for IP protocol UDP/TCP.</p> <hr/> <p>Dport Destination TCP/UDP port:(0-65535) or 'Any', specific or port range applicable for IP protocol UDP/TCP.</p>
6. IPv6	<p>Protocol IP protocol number: (0-255, 'TCP' or 'UDP') or 'Any'.</p> <hr/> <p>Source IP 32 LS bits of IPv6 source address in value/mask format or 'Any'.</p> <hr/> <p>Destination IP Specific Destination IP address in value/mask format or 'Any'.</p> <hr/> <p>DSCP Diffserv Code Point value (DSCP): It can be a specific value, range of values or 'Any'. DSCP values are in the range 0-63 including BE, CS1-CS7, EF or AF11-AF43.</p> <hr/> <p>Sport Source TCP/UDP port:(0-65535) or 'Any', specific or port range applicable for IP protocol UDP/TCP.</p> <hr/> <p>Dport Destination TCP/UDP port:(0-65535) or 'Any', specific or port range applicable for IP protocol UDP/TCP.</p>
Action Parameters	<p>CoS Class of Service: (0-7) or 'Default'.</p> <hr/> <p>DP Drop Precedence Level: (0-3) or 'Default'</p>

	DSCP	DSCP (0-63, BE, CS1-CS7, EF or AF11-AF43) or 'Default'.
	PCP	PCP: (0-7) or 'Default'. Note: PCP and DEI cannot be set individually.
	DEI	DEI: (0-1) or 'Default'.
	Policy	ACL Policy number: (0-255) or 'Default' (empty field). 'Default' means that the default classified value is not modified by this QCE.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

Cancel: Return to the previous page without saving the configuration change.

6.13.1.12. Storm Policing

WEB MENU Configuration>QoS>Storm Policing

Global storm policers for the switch are configured on this page.

Global Storm Policer Configuration

Frame Type	Enable	Rate	Unit
Unicast	<input type="checkbox"/>	10	fps ▼
Multicast	<input type="checkbox"/>	10	fps ▼
Broadcast	<input type="checkbox"/>	10	fps ▼

Global Storm Policer Configuration

There is a unicast storm policer, multicast storm policer, and a broadcast storm policer.

These only affect flooded frames, i.e. frames with a (VLAN ID, DMAC) pair not present in the MAC Address table. The displayed settings are:

Object	Description
Frame Type	The frame type for which the configuration below applies.
Enable	Enable or disable the global storm policer for the given frame type.
Rate	Controls the rate for the global storm policer. This value is restricted to 10-13128147 when "Unit" is fps or kbps, and 1-13128 when "Unit" is kfps or Mbps. The rate is internally rounded up to the nearest value supported by the global storm policer.
Unit	Controls the unit of measure for the global storm policer rate as fps, kfps, kbps or Mbps.

Port Storm Policer Configuration

Port storm policers for all switch ports are configured on this page.

There is a storm policer for unicast frames, broadcast frames and unknown (flooded) frames.

The displayed settings are

Object	Description
Port	The port number for which the configuration below applies.
Enable	Enable or disable the storm policer for this switch port.
Rate	Controls the rate for the port storm policer. This value is restricted to 10-13128147 when "Unit" is fps or kbps, and 1-13128 when "Unit" is kfps or Mbps. The rate is internally rounded up to the nearest value supported by the port storm policer.
Unit	Controls the unit of measure for the port storm policer rate as fps, kfps, kbps or Mbps.

Buttons

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

6.13.1.13. WRED

WEB MENU Configuration>QoS>WRED

This page allows you to configure the Random Early Detection (RED) settings.

Weighted Random Early Detection Configuration

Group	Queue	DPL	Enable	Min	Max	Max Unit
1	0	1	<input type="checkbox"/>	0	50	Drop Probability ▼
1	0	2	<input type="checkbox"/>	0	50	Drop Probability ▼
1	0	3	<input type="checkbox"/>	0	50	Drop Probability ▼

2	5	2	<input type="checkbox"/>	0	50	Drop Probability ▼
2	5	3	<input type="checkbox"/>	0	50	Drop Probability ▼
2	6	1	<input type="checkbox"/>	0	50	Drop Probability ▼
2	6	2	<input type="checkbox"/>	0	50	Drop Probability ▼
2	6	3	<input type="checkbox"/>	0	50	Drop Probability ▼
2	7	1	<input type="checkbox"/>	0	50	Drop Probability ▼
2	7	2	<input type="checkbox"/>	0	50	Drop Probability ▼
2	7	3	<input type="checkbox"/>	0	50	Drop Probability ▼

Weighted Random Early Detection Configuration

Through different RED configuration for the queues (QoS classes) it is possible to obtain Weighted Random Early Detection (WRED) operation between queues.

The settings are global for all ports in the switch.

Object	Description
Group	The WRED group number for which the configuration below applies.
Queue	The queue number (QoS class) for which the configuration below applies.
DPL	The Drop Precedence Level for which the configuration below applies
Enable	Controls whether RED is enabled for this entry.
Min	Controls the lower RED fill level threshold. If the queue filling level is below this threshold, the drop probability is zero. This value is restricted to 0-100%.
Max	Controls the upper RED drop probability or fill level threshold for frames marked with Drop Precedence Level > 0 (yellow frames). This value is restricted to 1-100%.
Max Unit	Selects the unit for Max. <u>Drop Probability</u> Max controls the drop probability just below 100% fill level. <u>Fill Level</u> Max controls the fill level where drop probability reaches 100%.

RED Drop Probability Function

The following illustration shows the drop probability versus fill level function with associated parameters.

Min is the fill level where the queue randomly start dropping frames marked with Drop Precedence Level > 0 (yellow frames).

If Max Unit is 'Drop Probability' (the green line), Max controls the drop probability when the fill level is just below 100%.

If Max Unit is 'Fill Level' (the red line), Max controls the fill level where drop probability reaches 100%. This configuration makes it possible to reserve a portion of the queue exclusively for frames marked with Drop Precedence Level 0 (green frames). The reserved portion is calculated as $(100 - \text{Max}) \%$.

Frames marked with Drop Precedence Level 0 (green frames) are never dropped.

The drop probability for frames increases linearly from zero (at Min average queue filling level) to Max Drop Probability or Fill Level.

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

Reset: Click to undo any changes made locally and revert to previously saved values.

6.14. MIRRORING

6.14.1. Mirroring Configuration

WEB MENU Configuration>Mirroring

Mirroring is a feature for switched port analyzer. The administrator can use the Mirroring to debug network problems. The selected traffic can be mirrored or copied on a destination port where a network analyzer can be attached to analyze the network traffic.

Remote Mirroring is an extend function of Mirroring. It can extend the destination port in other switch. So the administrator can analyze the network traffic on the other switches.

If you want to get the tagged mirrored traffic, you have to set VLAN egress tagging as "Tag All" on the reflector port.

On the other hand, if you want to get untagged mirrored traffic, you have to set VLAN egress tagging as "Untag ALL" on the reflector port.

Mirroring & Remote Mirroring Configuration

Mode	Disabled
Type	Mirror
VLAN ID	200
Reflector Port	Port 1

Source VLAN(s) Configuration

Source VLANs	
--------------	--

Port Configuration

8	Disabled	<input type="checkbox"/>	<input type="checkbox"/>
CPU	Disabled	<input type="checkbox"/>	<input type="checkbox"/>

Mirroring & Remote Mirroring Configuration

Object	Description
Mode	To Enabled/Disabled the mirror or Remote Mirroring function.
Type	Select switch type. Mirror The switch is running on mirror mode. _____ The source port(s) and destination port are located on this switch. Source The switch is a source node for monitor flow. _____ The source port(s), reflector port and intermediate port(s) are located

	<p>on this switch.</p> <hr/> <p>The switch is a forwarding node for monitor flow and the switch is an option node.</p> <p>Intermediate The object is to forward traffic from source switch to destination switch.</p> <hr/> <p>The intermediate ports are located on this switch.</p> <hr/> <p>The switch is an end node for monitor flow.</p> <p>Destination The destination port(s) and intermediate port(s) are located on this switch.</p>
VLAN ID	The VLAN ID points out where the monitor packet will copy to. The default VLAN ID is 200.
Reflector Port	<p>The reflector port is a method to redirect the traffic to Remote Mirroring VLAN. Any device connected to a port set as a reflector port loses connectivity until the Remote Mirroring is disabled.</p> <p>In the stacking mode, you need to select switch ID to select the correct device.</p> <p>If you shut down a port, it cannot be a candidate for reflector port.</p> <p>If you shut down the port which is a reflector port, the remote mirror function cannot work.</p> <p>Note1: The reflector port needs to select only on Source switch type.</p> <p>Note2: The reflector port needs to disable MAC Table learning and STP.</p> <p>Note3: The reflector port only supports on pure copper ports.</p>

Source VLAN(s) Configuration

The switch can supports VLAN-based Mirroring. If you want to monitor some VLANs on the switch, you can set the selected VLANs on this field.

Note1: The Mirroring session shall have either ports or VLANs as sources, but not both.

Port Configuration

The following table is used for port role selecting.

Object	Description								
Port	The logical port for the settings contained in the same row.								
Source	<p>Select mirror mode.</p> <table border="1"> <tr> <td>Disabled</td> <td>Neither frames transmitted nor frames received are mirrored.</td> </tr> <tr> <td>Both</td> <td>Frames received and frames transmitted are mirrored on the Intermediate/Destination port.</td> </tr> <tr> <td>Rx only</td> <td>Frames received on this port are mirrored on the Intermediate/Destination port. Frames transmitted are not mirrored.</td> </tr> <tr> <td>Tx only</td> <td>Frames transmitted on this port are mirrored on the Intermediate/Destination port. Frames received are not mirrored.</td> </tr> </table>	Disabled	Neither frames transmitted nor frames received are mirrored.	Both	Frames received and frames transmitted are mirrored on the Intermediate/Destination port.	Rx only	Frames received on this port are mirrored on the Intermediate/Destination port. Frames transmitted are not mirrored.	Tx only	Frames transmitted on this port are mirrored on the Intermediate/Destination port. Frames received are not mirrored.
Disabled	Neither frames transmitted nor frames received are mirrored.								
Both	Frames received and frames transmitted are mirrored on the Intermediate/Destination port.								
Rx only	Frames received on this port are mirrored on the Intermediate/Destination port. Frames transmitted are not mirrored.								
Tx only	Frames transmitted on this port are mirrored on the Intermediate/Destination port. Frames received are not mirrored.								
Intermediate	<p>Select intermediate port.</p> <p>This checkbox is designed for Remote Mirroring.</p> <p>The intermediate port is a switched port to connect to other switch.</p> <p>Note: The intermediate port needs to disable MAC Table learning.</p>								
Destination	<p>Select destination port.</p> <p>This checkbox is designed for mirror or Remote Mirroring.</p> <p>The destination port is a switched port that you receive a copy of traffic from the source port.</p> <p>Note1: On mirror mode, the device only supports one destination port.</p> <p>Note2: The destination port needs to disable MAC Table learning.</p>								

Configuration Guideline for All Features

When the switch is running on Remote Mirroring mode, the administrator also needs to check whether or not other features are enabled or disabled.

For example, the administrator is not disabled the MSTP on reflector port. All monitor traffic will be blocked on reflector port.

Refer to the help page for all recommended settings.

Buttons

Apply: Click to apply changes.

Apply&Save: Click to apply and save changes.

7. Switch Diagnostics Guide

7.1. DIAGNOSTICS

7.1.1. Ping

WEB MENU Diagnostics>Ping

This page allows you to issue ICMP PING packets to troubleshoot IP connectivity issues.

ICMP Ping

IP Address	0.0.0.0
Ping Length	56
Ping Count	5
Ping Interval	1

Start

ICMP Ping

After you press Start, ICMP packets are transmitted, and the sequence number and round trip time are displayed upon reception of a reply. The amount of data received inside of an IP packet of type ICMP ECHO_REPLY will always be 8 bytes more than the requested data space(the ICMP header). The page refreshes automatically until responses to all packets are received, or until a timeout occurs.

7.1.2. Link OAM

7.1.2.1. MIB Retrieval

WEB MENU Diagnostics>Link OAM>MIB Retrieval

This page allows you to retrieve the local or remote OAM MIB variable data on a particular port.

Link OAM MIB Retrieval

Local
Peer
Port

Link OAM MIB Retrieval

Select the appropriate radio button and enter the port number of the switch to retrieve the content of interest. Click on 'Start' to retrieve the content. Click on 'New Retrieval' to retrieve another content of interest.

7.1.3. Ping6

WEB MENU Diagnostics>Ping6

This page allows you to issue ICMPv6 PING packets to troubleshoot IPv6 connectivity issues.

ICMPv6 Ping

IP Address	0:0:0:0:0:0:0
Ping Length	56
Ping Count	5
Ping Interval	1
Egress Interface	

ICMPv6 Ping

After you press 'Start', ICMPv6 packets are transmitted, and the sequence number and round trip time are displayed upon reception of a reply.

The page refreshes automatically until responses to all packets are received, or until a timeout occurs.

Object	Description
IP Address	The destination IP Address.
Ping Length	The payload size of the ICMP packet. Values range from 2 bytes to 1452 bytes.
Ping Count	The count of the ICMP packet. Values range from 1 time to 60 times.
Ping Interval	The interval of the ICMP packet. Values range from 0 second to 30 seconds.
Egress Interface (Only for IPv6)	<p>The VLAN ID (VID) of the specific egress IPv6 interface which ICMP packet goes. The given VID ranges from 1 to 4094 and will be effective only when the corresponding IPv6 interface is valid.</p> <p>When the egress interface is not given, PING6 finds the best match interface for destination.</p> <p>Do not specify egress interface for loopback address.</p> <p>Do specify egress interface for link-local or multicast address.</p>

Buttons

: Click to start transmitting ICMP packets.

: Click to re-start diagnostics with PING.

7.1.4. VeriPHY

WEB MENU Diagnostics>VeriPHY

This page is used for running the VeriPHY Cable Diagnostics for 10/100 and 1G copper ports.

VeriPHY Cable Diagnostics

Port

Cable Status								
Port	Pair A	Length A	Pair B	Length B	Pair C	Length C	Pair D	Length D
1	--	--	--	--	--	--	--	--
2	--	--	--	--	--	--	--	--
3	--	--	--	--	--	--	--	--
4	--	--	--	--	--	--	--	--

VeriPHY Cable Diagnostics

Press 'Start' to run the diagnostics. This will take approximately 5 seconds. If all ports are selected, this can take approximately 15 seconds. When completed, the page refreshes automatically, and you can view the cable diagnostics results in the cable status table. Note that VeriPHY is only accurate for cables of length 7 - 140 meters.

10 and 100 Mbps ports will be linked down while running VeriPHY. Therefore, running VeriPHY on a 10 or 100 Mbps management port will cause the switch to stop responding until VeriPHY is complete.

Object	Description
Port	The port where you are requesting VeriPHY Cable Diagnostics.
Cable Status	Port Port number.
	Pair The status of the cable pair. OK - Correctly terminated pair Open - Open pair Short - Shorted pair Short A - Cross-pair short to pair A Short B - Cross-pair short to pair B Short C - Cross-pair short to pair C Short D - Cross-pair short to pair D Cross A - Abnormal cross-pair coupling with pair A Cross B - Abnormal cross-pair coupling with pair B Cross C - Abnormal cross-pair coupling with pair C Cross D - Abnormal cross-pair coupling with pair D
	Length The length (in meters) of the cable pair. The resolution is 3 meters

8. Switch Maintenance Guide

8.1. MAINTENANCE

8.1.1. Restart Device

WEB MENU Maintenance>Restart Device

You can restart the switch on this page. After restart, the switch will boot normally.

When restarting, the startup-config will be loaded. (If not saved, the configuration will be lost upon restart.)

Restart Device

Are you sure you want to perform a Restart?

Buttons

: Click to restart device.

: Click to return to the Port State page without restarting.

EXAMPLE WEB

WEB MENU Maintenance>Restart Device

Restart Device

Are you sure you want to perform a Restart?

Click the "Yes" button

System restart in progress

The system is now restarting.

Waiting, please stand by...

After waiting for a few minutes, the initial screen (Port State) will be displayed, and the restart will be completed.

EXAMPLE CLI

✓ **Restart Device(Load Startup-Config and Restart)**

```
# reload cold
% Cold reload in progress, please stand by.
#
#####
###: Start SOLTECH_boot_v1_1      ###
#####
###: CPU Test.....PASS!
###: TCAM Test.....PASS!
###: DRAM Test.....PASS!
###: Flash Test.....PASS!

###: Please wait system up .....

###: Dev MAC addr: [00:21:6D:00:00:00]
###: Board Serial: [S0000000000000](5014)
###: Board Name: SFC4100
###: Port Info: Port:12[UTP:8(PoE:8),SFP:4]

###: Press ENTER to get started
```

8.1.2. Factory Defaults

WEB MENU Maintenance>Factory Defaults

You can reset the configuration of the switch on this page. Only the IP configuration is retained.

The new configuration is available immediately, which means that no restart is necessary.

Factory Defaults

Are you sure you want to reset the configuration(including All Users Info.) to Factory Defaults?

Buttons

: Click to reset the configuration to Factory Defaults.(Including Start-up Config.)

: Click to reset the configuration to Factory Defaults. (Excluding Start-up Config.)

: Click to return to the Port State page without resetting the configuration.

EXAMPLE WEB

WEB MENU Maintenance>Factory Defaults

Factory Defaults

Are you sure you want to reset the configuration(including All Users Info.) to Factory Defaults?

✓ Factory Defaults

➤ Yes

When executing Factory Defaults on the web, the settings will be Default-config, excluding the IP configuration.

Clicking 'Yes' will result in the current IP being overwritten in the Startup-config.

➤ Yes(No Save)

When executing Factory Defaults on the web, the settings will be Default-config, excluding the IP configuration.

Clicking 'Yes (No Save)' will prevent the current IP from being overwritten in the Startup-config.

(This means that the IP configuration of the device can change upon reboot.)

➤ **No**

Clicking 'No' will return you to the initial screen.

EXAMPLE CLI

✓ Factory Defaults

➤ **Defaults**

Executing "Defaults" in the CLI will reset the device, including IP configurations, to their default settings. (Startup-config initialization)

```
# reload defaults

% Reloading defaults (Update startup-config). Please stand by.
Config Factory-Default applied! (Update startup-config, By CLI)
# Reset configuration start!!!
Reset configuration done!!!
```

➤ **Defaults keep-ip**

Executing "Defaults" in the CLI will reset the device to its default settings, excluding the IP configurations. (The IP settings in the Startup-config will be overwritten.)

```
# reload defaults keep-ip

% Reloading defaults, attempting to keep VLAN 1 IP address (Update startup-config).
Please stand by.
Reset configuration start!!!
Reset configuration done!!!
Config Factory-Default applied! (Update startup-config, Keeping IP-addr, By CLI)

#: Please input a new admin password:
```

➤ **Defaults no-save**

Executing "Defaults" in the CLI will reset the device to its default settings, including the IP configurations.

(The Startup-config will remain unchanged.)

Do not enter the security model initial setup password into flash.)

Upon restart after the configuration, the previously saved Startup-config will be loaded as it was.

```
# reload defaults-no-save

% Reloading defaults . Please stand by.
Config Factory-Default applied! (By CLI)
# Reset configuration start!!!
Reset configuration done!!!

#: Please input a new admin password:*****
#: Please input the new password AGAIN:*****
#: Save admin password to flash now ? (yes/no):no

#
```

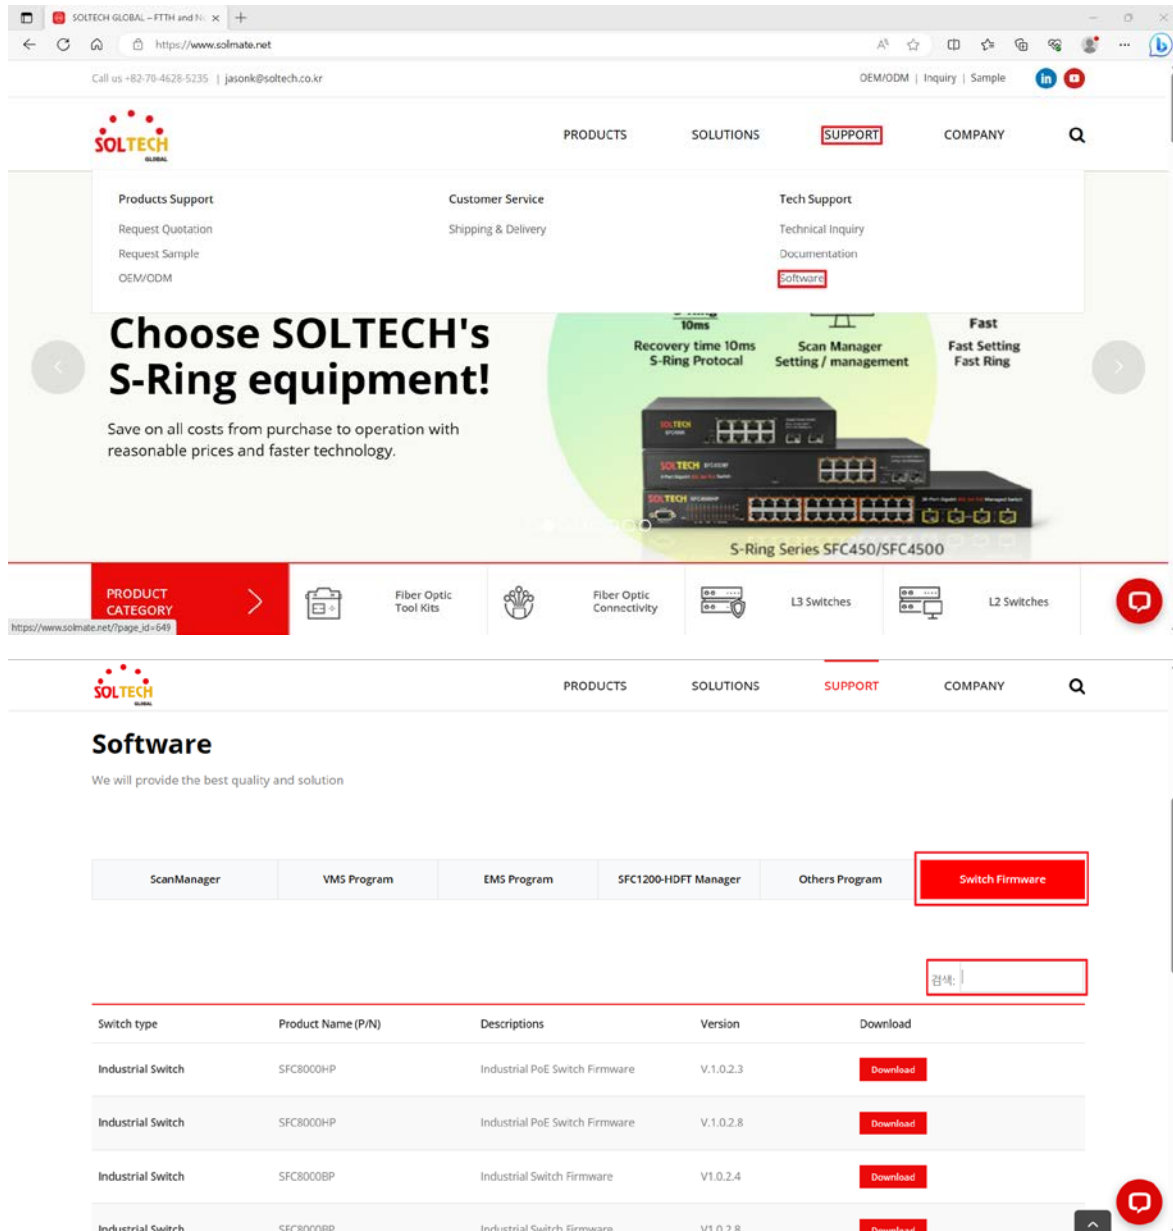

8.1.3. Software

8.1.3.1. Firmware Download

On this page provide instructions for downloading the firmware for the Devices.

Access the company website at www.solmate.net.

SUPPORT>Software>Switch Firmware>Please Search Product Name.

The screenshot shows the SOLTECH website's 'Software' page. The page features a navigation menu with 'SUPPORT' highlighted. Below the navigation, there are sections for 'Products Support', 'Customer Service', and 'Tech Support'. A large banner promotes 'Choose SOLTECH's S-Ring equipment!' with features like '10ms Recovery time 10ms S-Ring Protocol', 'Scan Manager Setting / management', and 'Fast Fast Setting Fast Ring'. Below the banner, there are icons for various product categories: Fiber Optic Tool Kits, Fiber Optic Connectivity, L3 Switches, and L2 Switches. The 'Software' section is titled 'Software' and includes the text 'We will provide the best quality and solution'. A horizontal menu lists 'ScanManager', 'VMS Program', 'EMS Program', 'SFC1200-HDFT Manager', 'Others Program', and 'Switch Firmware'. A search bar is present with the text '검색:'. Below the search bar, a table lists firmware downloads for various switch types and product names.

Switch type	Product Name (P/N)	Descriptions	Version	Download
Industrial Switch	SFC800HP	Industrial PoE Switch Firmware	V.1.0.2.3	Download
Industrial Switch	SFC800HP	Industrial PoE Switch Firmware	V.1.0.2.8	Download
Industrial Switch	SFC800BP	Industrial Switch Firmware	V1.0.2.4	Download
Industrial Switch	SFC800BP	Industrial Switch Firmware	V1.0.2.8	Download

You can search for the latest firmware of the product by entering its product name.

8.1.3.2.Upload

WEB MENU Maintenance>Software>Upload

This page facilitates an update of the firmware controlling the switch.

Software Upload

No file chosen

Buttons

: Click this button, you can find the software image to upload.

: Click this button, upload the selected software image.

After the software image is uploaded, a page announces that the firmware update is initiated. After some minutes, the firmware is updated and the switch restarts.

Warning : Do not restart or power off the device at this time or the switch may fail to function afterwards.

Warning: While the firmware is being updated, Web access appears to be defunct. The front LED flashes Green/Off with a frequency of 10 Hz while the firmware update is in progress. **Do not restart or power off the device at this time** or the switch may fail to function afterwards.

EXAMPLE WEB

✓ Software Upload

Software Upload

SONOS.dat

After clicking on "

 choose the folder containing the image. Once selected, the file name will be displayed as shown above. The required file for the update is a (.dat) file extension.

Click the "Upload" button to proceed with the update.

EXAMPLE CLI

The method for software upgrade using console (utilizing TFTP)

✓ Software Upload

1. Run the Tftpd32 program.

2. Click on "Browse" to locate the file you want to update.

3. Click on "Show Dir" to select the file, then click "Copy," and click "Close" to close the window.

4. Return to the console window and enter the following commands.

```
# firmware upgrade tftp://PC IP Address/filename.dat
# firmware upgrade tftp://192.168.10.130/SFC8100BT.dat
Downloaded "SFC8100BT.dat", 5799906 bytes
TFTP Host:192.168.10.130 Upgrade Start (Download:5799906 Bytes)
###: Verifying firmware image integrity .....
IMG-KEY:3D5801C74658E0DA4C0AEDC28ABCF896D0C46331A1843DC7A930787659122861
CAL-KEY:3D5801C74658E0DA4C0AEDC28ABCF896D0C46331A1843DC7A930787659122861
SHA256 hash verified: SUCCESS
```

8.1.3.3. Image Select

WEB MENU Maintenance>Software>Image Select

This page provides information about the active and alternate (backup) firmware images in the device, and allows you to revert to the alternate image.

The web page displays two tables with information about the active and alternate firmware images.

Software Image Selection

Active Image	
Image	managed
Version	SFC6810G 5.0.1.0
Date	2023-06-15T09:16:47+09:00

Alternate Image	
Image	managed.bk
Version	Onemg_JAGUAR2 (standalone) build 5.0.1.0 by Soltech Corp.
Date	2023-06-15T09:16:47+09:00

Note:

1. In case the active firmware image is the alternate image, only the "Active Image" table is shown. In this case, the Activate Alternate Image button is also disabled.
2. If the alternate image is active (due to a corruption of the primary image or by manual intervention), uploading a new firmware image to the device will automatically use the primary image slot and activate this.
3. The firmware version and date information may be empty for older firmware releases. This does not constitute an error.

Software Image Selection

Object	Description
Image	The file name of the firmware image, from when the image was last updated.
Version	The version of the firmware image.
Date	The date where the firmware was produced.

Buttons

Activate Alternate Image

: Click to use the alternate image. This button may be disabled depending on system state.

Cancel

: Cancel activating the backup image. Navigates away from this page.

EXAMPLE WEB

WEB MENU Maintenance>Software>Image Select

Software Image Selection

Active Image	
Image	SFC6810BT.dat
Version	SFC6810BT 5.0.3.0
Date	2023-07-21T14:21:27+09:00

Alternate Image	
Image	managed.bk
Version	Onelmg_JAGUAR2 (standalone) build 5.0.1.0 by Soltech Corp.
Date	2023-07-17T15:20:33+09:00

Clicking on will activate the alternative image. Use it if there are issues with the existing image.

System restart in progress

The system is now restarting.

Waiting, please stand by...

EXAMPLE CLI

✓ Software Image Selection

```
# firmware swap
... Erase from 0x40fd0000-0x40fdffff: .
... Program from 0x8ffdfffc-0x8ffeffc to 0x40fd0000: .
... Program from 0x8ffe0006-0x8ffe0008 to 0x40fd000a: .
Alternate image activated, now rebooting.
#
```

8.1.4. Configuration

The switch stores its configuration in a number of text files in CLI format. The files are either virtual (RAM-based) or stored in flash on the switch.

1. running-config: A virtual file that represents the currently active configuration on the switch. This file is volatile.
2. startup-config: The startup configuration for the switch, read at boot time. If this file doesn't exist at boot time, the switch will start up in default configuration.
3. default-config: A read-only file with vendor-specific configuration. This file is read when the system is restored to default settings.

Up to 31 other files, typically used for configuration backups or alternative configurations.

8.1.4.1. CLI dir

This page provides instructions on how to view the currently stored config file on the Flash using the CLI.

In the case of the web interface, this functionality is already implemented on the required page.

EXAMPLE CLI

✓ **Dir Command in CLI**

```
# dir
Directory of flash:
  r- 1970-01-01 00:00:00   316 default-config
  rw 1970-01-01 07:43:36  1083 startup-config
2 files, 1399 bytes total.
```

A total of 32 files can be stored on Flash. You can create them using the "Upload" option.

8.1.4.2. Save startup-config

WEB MENU Maintenance>Configuration>Save startup-config

Save Running Configuration to startup-config

Please note: The generation of the configuration file may be time consuming, depending on the amount of non-default configuration.

This copies running-config to startup-config, thereby ensuring that the currently active configuration will be used at the next reboot.

Buttons

: Click "Save configuration" to copy the running-config to the startup-config.

EXAMPLE WEB

WEB MENU Maintenance>Configuration>Save startup-config

Save Running Configuration to startup-config
Please note: The generation of the configuration file may be time consuming, depending on the amount of non-default configuration.

Click on to store the current configuration state. Even after restarting, the current configuration state will be retained.

EXAMPLE CLI

✓ Copy running-config to start-config

```
# copy running-config startup-config
Building configuration...
% Saving 1083 bytes to flash:startup-config
#
```

8.1.4.3. Download

WEB MENU Maintenance>Configuration>Download

It is possible to download any of the files on the switch to the web browser.

Download Configuration

Select configuration file to save.

Please note: running-config may take a while to prepare for download.

File Name
<input type="radio"/> running-config
<input type="radio"/> default-config
<input type="radio"/> startup-config

Download Configuration

Select the file and Click 'Download Configuration'.

Download of running-config may take a little while to complete, as the file must be prepared for download.

EXAMPLE WEB

WEB Menu Maintenance>Configuration>Download

Download Configuration

Select configuration file to save.

Please note: running-config may take a while to prepare for download.

File Name
<input checked="" type="radio"/> running-config
<input type="radio"/> default-config
<input type="radio"/> startup-config

Download Configuration

Please select the file and click on 'Download Configuration'.

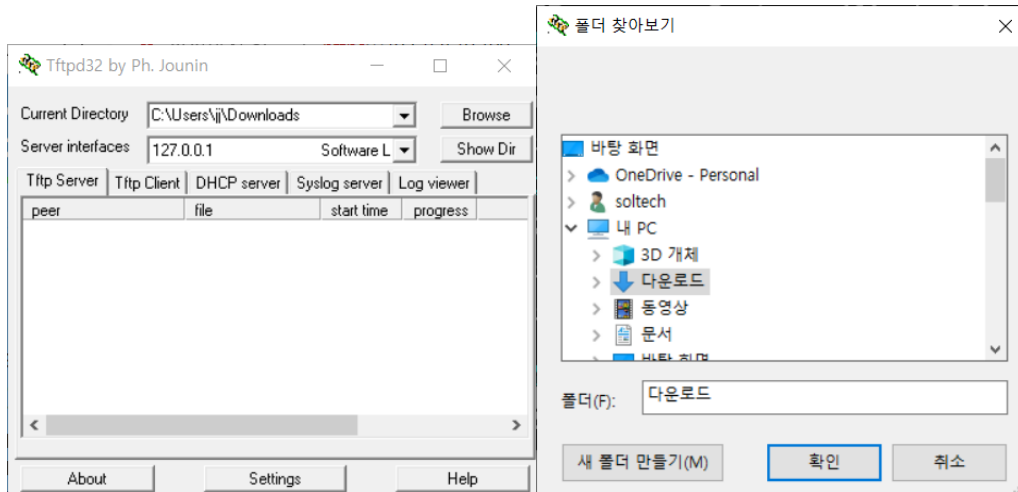

The downloaded file will be displayed.

EXAMPLE CLI

✓ Download Configuration

Run Tftpd32 and choose the destination to save the file.

Click on "Browse" to set the location where the file will be saved.

Subsequently, enter the CLI command.

```
# copy flash-filename tftp://PC IPv4 Address/save-filename
# copy running-config tftp://192.168.10.130/running-config
Building configuration...
% Saving 1083 bytes to TFTP server 192.168.10.130: running-config
```

Please check if the file has been saved in the respective folder.

8.1.4.4. Upload

WEB MENU Maintenance>Configuration>Upload

It is possible to upload a file from the web browser to all the files on the switch, except default-config which is read-only.

Upload Configuration

File To Upload

No file chosen

Destination File

File Name	Parameters
<input type="radio"/> running-config	<input checked="" type="radio"/> Replace <input type="radio"/> Merge
<input type="radio"/> startup-config	
<input type="radio"/> Create new file	<input type="text"/>

Select the file to upload, select the destination file on the target, then click Upload Configuration.

File To Upload

Buttons

: Select the file to upload

Destination File

Select the destination file on the target

Object	Description
Running-config	The file will be applied to the switch configuration. This can be done in two ways: Replace mode The current configuration is fully replaced with the configuration in the uploaded file. Merge mode The uploaded file is merged into running-config.
Startup-config	The file will be stored in the startup-config. It will be applied after the device is restarted.
Create new file	If the flash file system is full (i.e. contains default-config and 32 other files, usually including startup-config), it is not possible to create new files. Instead an existing file must be overwritten or another file must be deleted.

Buttons

: To upload the configuration file to the destination file, click "Upload Configuration".

EXAMPLE WEB

WEB Menu Maintenance>Configuration>Upload

Upload Configuration

File To Upload

No file chosen

Destination File

File Name	Parameters
<input type="radio"/> running-config	<input checked="" type="radio"/> Replace <input type="radio"/> Merge
<input type="radio"/> startup-config	
<input type="radio"/> Create new file	

1. Click on to load the saved configuration.

2. After selecting the desired file, click the "Open" button.

Upload Configuration

File To Upload

running-config

Destination File

File Name	Parameters
<input checked="" type="radio"/> running-config	<input checked="" type="radio"/> Replace <input type="radio"/> Merge
<input type="radio"/> startup-config	
<input type="radio"/> Create new file	

3. Select the desired Destination File and click on "Upload Configuration".
(For the Running-config, you can choose to Replace or Merge.)

Activating New Configuration

Please note: If the configuration changes IP settings, management connectivity may be lost.

Status

Activation completed successfully.

Output

```
10GigabitEthernet 1/1 does not have PoE support
10GigabitEthernet 1/2 does not have PoE support
10GigabitEthernet 1/3 does not have PoE support
10GigabitEthernet 1/4 does not have PoE support
```

The screen will appear, and the configuration will be uploaded.

EXAMPLE CLI

✓ Upload Configuration

Since direct uploading to the Running-Config is currently unavailable, let me introduce an alternative method.

1. Click on "Browse" in tftpd32 to set the path.

- Click on "show Dir" to select the file, then click on "Copy", and finally click "Close" to close the window.

- Return to the console window and enter the following.

```
# copy tftp://<PC IPv4 Address>/<upload_filename> startup-config
# copy tftp://192.168.10.130/running-config startup-config
% Loading 123 from TFTP server 192.168.10.130
% Saving 1083 bytes to flash:startup-config

# reload cold
```

8.1.4.5. Activate

WEB MENU Maintenance>Configuration>Activate

Activate Configuration

Select configuration file to activate. The previous configuration will be completely replaced, potentially leading to loss of management connectivity.

Please note: The activated configuration file will not be saved to startup-config automatically.

File Name
<input type="radio"/> default-config
<input type="radio"/> startup-config

Activate Configuration

Activate Configuration

Select configuration file to activate. The previous configuration will be completely replaced, potentially leading to loss of management connectivity.

Please note: The activated configuration file will not be saved to startup-config automatically.

Object	Description
Default-config	Except for Running-config, the Default-config will be activated.
Startup-config	Except for Running-config, the Startup-config will be activated.

Buttons

Activate Configuration

: Clicking on will replace the Running-config with the selected file.

EXAMPLE WEB

WEB Menu Maintenance>Configuration>Activate

Activate Configuration

Select configuration file to activate. The previous configuration will be completely replaced, potentially leading to loss of management connectivity.

Please note: The activated configuration file will not be saved to startup-config automatically.

File Name
<input checked="" type="radio"/> default-config
<input type="radio"/> startup-config

Activate Configuration

Select the desired configuration file and click on "Activate Configuration".

The following screen will be displayed, and the running-config of the device will be replaced.

Activating New Configuration

Please note: If the configuration changes IP settings, management connectivity may be lost.

Status

Activation completed successfully.

Output

(No output was generated.)

EXAMPLE CLI

✓ Activate Configuration

```
# copy <flash file> running-config  
# copy flash:default-config running-config
```

8.1.4.6. Delete

WEB MENU Maintenance>Configuration>Delete

It is possible to delete any of the writable files stored in flash, including startup-config. If this is done and the switch is rebooted without a prior Save operation, this effectively resets the switch to default configuration.

Delete Configuration File

Select configuration file to delete.

File Name
<input type="radio"/> startup-config
<input type="button" value="Delete Configuration File"/>

Buttons

: Clicking on it will delete the selected file.

EXAMPLE WEB

WEB MENU Maintenance>Configuration>Delete

✓ Delete Configuration File

Delete Configuration File

Select configuration file to delete.

File Name
<input checked="" type="radio"/> startup-config
<input type="button" value="Delete Configuration File"/>

Select the file you want to delete and click on "Delete Configuration File".

192.168.10.100 says

Are you sure you want to delete
startup-config?

Delete Configuration File

startup-config successfully deleted.

(Delete is complete. The device will go to default settings upon restart.)

EXAMPLE CLI

✓ **Delete Configuration File**

```
# delete <url_file>
# delete flash:startup-config
```

9. Fault Recovery Method

9.1. EMERGENCY RECOVERY

9.1.1. 3seconds Reset

If the device is not functioning or the settings are incorrect, there is a hardware button for quick equipment reset.

It is labeled "Reset" on the front panel. To perform the reset, use a thin and long clip or pen to press and hold it for about 3 seconds until the Port LEDs blink.

This will reset the device to its Factory Defaults, while the IP address will remain unchanged.

Please be cautious and make sure to reconfigure or upload the previously saved configuration to continue using the device.

9.1.2. 10seconds Reset

If the device is not functioning or the settings are incorrect, there is a hardware button for quick equipment reset.

It is labeled "Reset" on the front panel. To initiate the reset, use a thin and long clip or pen to press and hold it for about 10 seconds until the Port LEDs blink.

(Please note that the LED blinking pattern will be different from the 3-second reset.)

During this reset, all settings of the device, including the IP address, will be reverted to Factory Defaults.

(The default initial IP of the device is 192.168.10.100 Please reconfigure the device or upload the previously saved configuration to continue using it.)

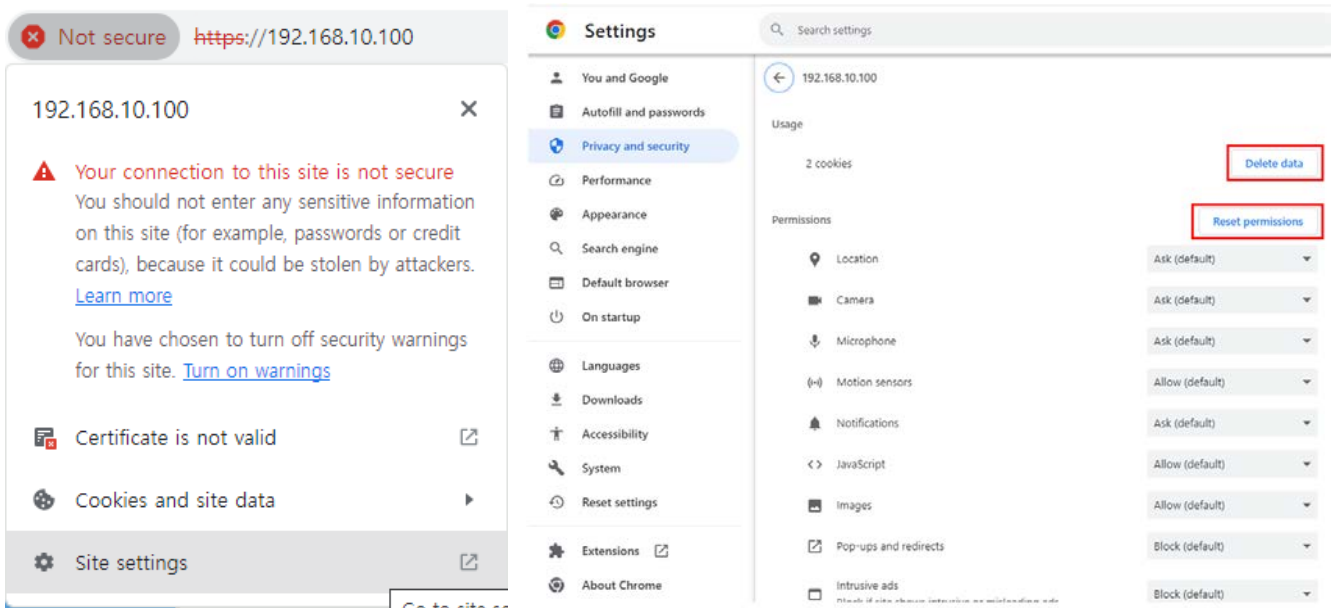

9.2. WEB INTERFACE CONNECTIVITY PROBLEM

If you are experiencing intermittent login failures or difficulty maintaining the login during WEB access, please follow the steps below.

Typically, closing and reopening all web browsers resolves the issue.

However, if the problem persists, please proceed with the following steps.

9.2.1. Google Chrome Browser

1. Click on the 'Not secure' next to the equipment's URL.
2. Click on the 'Site settings'
3. Verify the equipment's IP, then 'Delete Data' / 'Reset Permissions.'
4. After the setting changes, please restart the web browser.

9.2.2. Microsoft Edge Browser

The screenshot shows the Microsoft Edge browser interface. At the top, a warning bar indicates 'Not secure' for the URL <https://192.168.10.100>. Below this, a section titled 'About 192.168.10.100' contains a red warning: 'Your connection to this site isn't secure'. It advises not to enter sensitive information like passwords or credit cards. Below the warning, it states that security warnings are turned off for this site and provides a link to 'Turn on warnings'. Underneath, there are sections for 'Permissions for this site', 'Tracking prevention for this site (Balanced)' (which is turned on), and 'Trackers (0 blocked)'. The 'Cookies (1 cookies in use)' option is highlighted with a blue box. To the right, a 'Cookies in use' panel is open, showing a table with columns for Name, Content, Domain, Path, Send for, Created, and Expires. All these fields are currently empty, indicating 'No cookie selected'. At the bottom of the panel, there are 'Block', 'Remove', and 'Done' buttons. The 'Remove' button is highlighted with a blue box.

1. Click on the 'Not secure' next to the equipment's URL.
2. Click on 'Cookies,' remove the cookies, then restart the web browser.

The screenshot shows the Microsoft Edge browser interface with the 'Settings' menu open. The 'Permissions for this site' option is highlighted with a red box. The 'All sites / https://192.168.10.100' permissions page is also visible, showing a list of permissions with their current settings. The 'Reset permissions' button at the top right of this page is highlighted with a red box.

Permission	Current Setting
Location	Ask (default)
Camera	Ask (default)
Microphone	Ask (default)
Motion or light sensors	Allow (default)
Notifications	Ask (default)
JavaScript	Allow (default)
Images	Allow (default)
Pop-ups and redirects	Block (default)
Intrusive ads	Block (default)
Background sync	Allow (default)
Automatic downloads	Ask (default)

3. Click on the permissions for this site.
4. After verifying the equipment's IP, 'Reset Permissions.'
